William,
I have been talking to a guy with a Palm III, using pocket aprs and sending
email
vis aprs link. I would love to have that set up in the helicopter. It's a
cool set up but I can't find anyone with the pocket aprs software.

Did my previous post not make it out?? I have the pocketAPRS software v1.94 which I have played with on my Palm Tungsten C for a little bit.? Is this the software you are looking for?
A recent search on the internet came up dry.? I just happen to have archived my old PC at home and found it there from several years ago.

David;

Short answer is NO. Wide is the old & WideN-N is the new.

What TNC are you using?
Can you set the TNC up to Digi WideN-N?
The KPC3+ with the latest roms will do the WideN-N.

David;

APRS+SA will let me set VIA to WIDE1-1,WIDE2-1,WIDE3-1 and Alias to
WIDE1-1,WIDE2-1

How do you turn the DIGI on and off?
Do you need to edit the TNC configuration file to turn the DIGI on?

That may be the best you can do

2080. Re: Cherohala Challenge radio setup

Yahoo group: EastTNAPRS
Date: 2006-06-17 02:29:54 UTC
From: Scott
Topic: 2076 Message: 2080

I realize I'm not involved in the Challenge, and if you want to, you can tell me to butt out with no hard feelings. But I've been wondering about the choice of path and digi settings you all are planning to use.

WIDE1-1,WIDE2-1,WIDE3-1 in the path or Unproto will give you one hop out of a fill in, one hop out of a big digi, and one hop out of big digi, if the digi doesn't shut the path down on the WIDE2-1.

Remember, WIDEn-n "counts down", so when you hit a digi with WIDE2-1 or WIDE3-1, that is asking to do only one hop. I'm not sure it would send out the WIDE3-1. So you may be limiting your self to only two "real" hops, one through a fill in, and one in a big digi.

Also, anything other than a true WIDEn-n digi will trap a packet such as WIDE2-1 or WIDE3-1 if it is in the "alias" setting. In other works, if a D700, UI-VIEW, etc. "sees" a WIDE2-1 and it has WIDE2-1 in the alias, the packet stops, it goes no further.

I tried WIDE1-1,WIDE2-1,WIDE3-1 in my own UNPROTO and could only get 2 hops, because the digi that caught the WIDE2-1 did what it was supposed to do, sent on hop and stopped.

In KG4FZR-7's setup, in the UI-VIEW32 alias list, this is what appears:

WIDE7-7,WIDE7-6,WIDE7-5,WIDE7-4,WIDE7-3,WIDE7-2,WIDE7-1,WIDE6-6,
WIDE6-5,WIDE6-4,WIDE6-3,WIDE6-2,WIDE6-1,WIDE5-5,WIDE5-4,
WIDE5-3,WIDE5-2,WIDE5-1,WIDE4-4,WIDE4-3,WIDE4-2,WIDE4-1,WIDE1-1

That "traps" all those packets with those WIDEn-n's in them. So if I put WIDE2-1 or WIDE3-3 in it, it would "trap" those too.

Since WIDE3-3,WIDE3-2,WIDE3-1,WIDE2-2,WIDE2-1 DO NOT appear in its alias list, it DOES allow those packets on through.

Just my take, like I said, no offense taken if told to butt out.

Topic: 2081 Message: 2081

Is there a site online with schematic diagrams and other references for building your own TNC for beacons and telemetry (as in what is used on balloons)?

I want to build my own TNC and micro-transmitter like what the UTARC group has for their balloons that will fit in an altoids can.

Any help and reference material is appreciated.

Scott;

Thank you for an excellent explanation of why we chose this three hop path for the Cherahala Challenge. Remember if needed the TM-D700 can be setup as a digi with these alias from the display.

I watched the beacons today and found that one and two hop paths were needed most of the time but an occasional three hop path was needed.

Thank you for your interest your input is welcome.

2086. Re: [EastTNAPRS] Re: Cherohala Challenge radio setup

Yahoo group: EastTNAPRS
Date: 2006-06-18 02:11:54 UTC
From: William McKeehan
Topic: 2076 Message: 2086

Let me give you an example.

Let's say we have 3 digi's:
DI4GIA-1
DI4GIB-2
DI4GIC-3

In Case #1, assume all are setup as WIDEn-N under the new paradigm (assume B hears A, C hears B).

Packet goes out with WIDE1-1,WIDE2-1,WIDE3-1, for a 3 hop path. Here's what I would expect to see:

KI4HDU>APRS,WIDE1-1,WIDE2-1,WIDE3-1 <- original packet
KI4HDU>APRS,DI4IGA-1,WIDE1*,WIDE2-1,WIDE3-1
KI4HDU>APRS,DI4IGA-1,WIDE1,DI4IGB-2,WIDE2*,WIDE3-1
KI4HDU>APRS,DI4IGA-1,WIDE1,DI4IGB-2,WIDE2,DI4IGC-3,WIDE3*

Right? If you don't believe me, see the sample packet below from FindU (http://www.findu.com/cgi-bin/raw.cgi?call=KI4HDU&time=1).

In Case #2, assume that all are "dumb" digi's (i.e., D700's setup as I described) and not WIDEn-N.

KI4HDU>APRS,WIDE1-1,WIDE2-1,WIDE3-1 <- original packet
KI4HDU>APRS,DI4IGA-1,WIDE2-1,WIDE3-1
KI4HDU>APRS,DI4IGA-1,DI4IGB-2,WIDE3-1
KI4HDU>APRS,DI4IGA-1,DI4IGB-2,DI4IGC-3

Depending on the degree of the "New Paradigm" that is adopted by each digi along the way, you may get some combination of the above (case #3), but still 3 hops..

Here's an example from FindU for one of my packets from today's event for case 1 above:
20060617161045,KI4HDU>APX183,KG4FZR-7,WIDE1,NT4UX-4,WIDE2,NT4UX-2,WIDE3*,qAS,KG4NRC::WA4BDS-12:ack81

and case #2:
20060617133051,KI4HDU>APX183,WA4BDS-12,WA4BDS,K4EZK-12*,qAo,KF4IFC:@170932/3530.53N/08359.11Wk176/009/A=000000/Laptop
Station

and case #3:
20060617164002,KI4HDU>APX183,KF4OWQ-2,WIDE2,N9UMJ-10,WIDE3*,qAR,KB9QJM-10::WA4BDS-12:3519.818 83 56.039{7a}85

I want to build a TNC and Transmitter interface just like the payloads used on the UX flight last weekend.

David's link looks very interesting, and we might be able to incorporate this in to a future UX flight.

I've gone out to Radio Shack and bought the PCB design kit and soldering iron for doing this with, and even got a dish pan to put the PCB in to work on the design with.

Now I just need to figure all this out. The circuit deisned in the WhereAVR looks pretty good, and I think I can pull it off with a little work. I was hoping to start some this weekend but it looks like I'll be cleaning out my shack and putting my poker table together.

I jumped on a response to this note when I returned home from the event Saturday evening, but in re-reading the note, I may have missed the point (that's what I get for sending an e-mail when I should have been heading to bed).

Is your point/comment/question that the 3-hop path that we used would get TRAPED by the suggested setup?

The TRAP only works on one alias at a time, so it would take: WIDE7-7 and make that a single hop, but a WIDE7-7,WIDE7-7 would become a 2-hop path (if both hops were traped). Are you indicating that it should/does work differently?

2094. RE: [EastTNAPRS] Digi Antenna?

Yahoo group: EastTNAPRS
Date: 2006-06-21 12:46:36 UTC
From: Travis J. Maclay
Topic: 2092 Message: 2094

When I program the TNC, what callsign should I use? Not sure if it is the call of the site location, my call, or whoever.

The rest of the settings will be fairly straight forward, outside of any remote commands that need to be setup. I've never set those up before, so anyone with recommendations, please let me know. If the things you share about remote commands or control is information sensitive, please reply off list.

Thanks!
Travis

Subject: [EastTNAPRS] Digi Antenna?

Hi guy's

I was wondering if the antenna as been purchased / received yet? If it has I need to arrange to get it so I can start collecting the parts.

If the antenna is here, Travis can I arrange to get the TNC and power supply (wall wart?) from you so I also have it in hand to give to Scott? I am not sure how to program the TNC, can you have it set up and program for deployment to the site. I also need to get a list of connector (s) that we need or need to build to connect to Scott's radio system.

If everything has been purchased and the TNC is programmed we can work with Scott on getting it up to the site and start testing it.

Scott when you see this can you please email me off the list your number so I can call you and we can talk about it.

travis,
whoever sets it up should have their callsign on it, unless it's a club callsign. that way you can remotely change parameters and tweak it, or shut it down as needed.
you've got my vote.

From: Bob Thomas
Topic: 2092 Message: 2099

the repeater controller and cabinet should have nothing to do with the callsign of the digi and the digi's radio. the digi callsign should be the person who sets it up and can shut it off. no offence to kd4cwb. if kd4cwb want his callsign on it, then he should set it up and be completely responsble. that's the way ks4ng-7 is setup and should be out of respect for the expertise of the individual in direct control and setup of the digi.

2101. Tri-Cities Igate

Yahoo group: EastTNAPRS
Date: 2006-06-22 02:53:03 UTC
From: Stephen
Topic: 2101 Message: 2101

Well I finally got off my butt and put one up. I don't have full Igate to RF enabled yet, mainly due to radio constraints, but I am passing everything I hear onto the internet.

I have a dedicated server running an Ubuntu Linux 6.06 server only install and javAPRSSrvr. Anyone who likes linux and wants the ability to Igate should look at this and give it a shot, it is one capable piece of software!

I don't believe there is anyone here in the Tri-Cities area running an Igate, at least not full time. My plans are to leave this up 24/7, and once I get a more suitable radio I will open up Igate to RF.

I am still learning a lot about Igates/APRS and what not, so if anyone has any suggestions please feel free to fire them my way.....

From: William McKeehan
Topic: 2092 Message: 2103

From what I'm hearing in these discussions, I am beginning to wonder...

Can you adjust the kantronics TNC from remote? To do so, do you need to be using the same callsign as the TNC?

I have no preference about what callsign is on the digi. If there is value in having something other than KD4CWB, then maybe that value should be discussed with KD4CWB. Maybe he'll get his own packet station so he could control the TNC remotely in addition to the "control" that he currently has (which I presume is cut the power type of control). I would love to see another station on the air :-)

I've gotten a few replies off list regarding this. I could care less whose call is programmed into the TNC, but Bob makes a good point. If I use KD4CWB, I at least plan to be able to access the TNC remotely. I think there are a few players who should have access to do this as well, especially since you are located as far away as you are Moe.

Thoughts? Fire away.

2107. Digi Antenna has arrived

Yahoo group: EastTNAPRS
Date: 2006-06-22 22:17:00 UTC
From: David J. Hoffman
Topic: 2107 Message: 2107

If Scott can cut the power, kill the transmitter etc., from another repeater via a different controller, then why does he need remote access to the TNC. I think configuration access should be somebody that's been doing APRS for a while and is active in this group. Therefore we can discuss configuration changes and tweak settings in here and then try them out once we deem the change as a needed change. I know Moe, you want this control, so I think you, Travis and Scott should all have it. All three of you each, for various and different reasons.

By the way, the antenna has arrived.

You folks do realize that you have to be in simplex range with a STRONG signal to remote access the TNC, right?

Better to let Scott do a switch off one of his repeater controllers to kill it, and go the site with a laptop to program it.

I'm confused about one thing you said in regard to being in simplex range. Wouldn't anyone using the digi directly be in simplex range? Maybe I'm showing lots of ignorance here, or maybe I'm tired :-)

73,
Travis

You folks do realize that you have to be in simplex range with a STRONG signal to remote access the TNC, right?

Better to let Scott do a switch off one of his repeater controllers to kill it, and go the site with a laptop to program it.

> If Scott can cut the power, kill the transmitter etc., from another repeater via a different controller, then why does he need remote access to the TNC. I think configuration access should be somebody that's been doing APRS for a while and is active in this group. Therefore we can discuss configuration changes and tweak settings in here and then try them out once we deem the change as a needed change. I know Moe, you want this control, so I think you, Travis and Scott should all have it. All three of you each, for various and different reasons.

I got a motorola mitrek in today from an Ebay auction. A high band VHF, 50 watt radio. Transmit and receive seem OK on early tests into a dummy load. I may have a lead of a repeater site that would give free access for amateur use in campbell county, near the onieda/huntsville exit on I75. I am getting ready to modify the radio and get crystals for the APRS frequency. Does anyone have a tnc that they could loan to me and help with testing?

Hey Joe, that is the same type of radio I used in a portable repeater during the Cherohala Challenge Bike Ride this past weekend. It worked out great. I picked up several VHF versions this year at the Hamvention. I was thinking about getting crystals for 144.390MHz and fixing one of them up. Good luck on your project.

I think what Scott is trying to convey is that who ever will be controlling the TNC via RF needs to have a decent enough signal to override the weaker signals. With the amount of RF traffic that this digi could see, you will want to have enough off a signal (power) to overcome those weaker signals when it comes to controlling the digi. Your station will wait to make sure the frequency is clear before transmitting, then when you do, you will most likely transmit while a weaker station that you didn?t hear is transmitting. Well that is known as a doubling and depending on who had the stronger signal, it may make both transmissions unreadable. If yours was allot stronger, then you might win. But now it would depend on how well the decoder was able to decode your packet over that weaker signal. When two signals come in at the same time, neither one of them can be decoded and therefore, both of them lose.

From: Bob Thomas
Topic: 2117 Message: 2117

Ok group, FYI,
As this group and ham radio in general is an educational thing, for those who don't want to read the kpc-3+ book, yes the kantronics kpc3+ model does have some neat little known features: in "ka-node" mode it can be remotely setup via a password protected link. it also can be setup as a mailbox, node, or both. also, the newer models have some ports for monitoring sensors, such as temp, backup battery voltage and any other neat sensor stuff you can configure from a forrest mims III project book... earthquake sensor? they draw about 30 mw verses the mfj's power hungry 300 mw requirement. the person who sets it up gives it a password and can set or reset it's parameters remotely. you can "connect", then check out the station's conditions and parameters without having to go up on a mountain top with a computer. a packet node can be a really neat asset to a repeater site. also, they can run off a 9 volt battery for a day or so if needed. my kpc3, an Eagle GPS receiver, and a Kenwood TH22 AT HT make up my lightweight portable aprs "tracker".
the mfj tnc's, in node setup, require an eprom with a "burned in" X1J-4 program and callsign. with that chip installed, they can also accept an I/O board and do temp, incoming signal deviation, battery voltage, etc., and any other cool stuff you could imagine. they're stackable and could be used to gateway different bands and frequencies. also, they can be used for control or special aprs envents, etc. The X1J-4 nodes do really cool automatic routing between other X1J-4 nodes, but lack all the neat call substitution aprs routing capability that the newer kpc's have. the X1j-4 used to be supported on aprs, but are now highly discouraged as an aprs digipeater. they are fine for the qth, though.
now, as far as the callsign is concerned, it is my humble opinion that the person controlling a station by setting up and mantaining a packet station is the "control operator" of the equipment and should be the one responsible for it's operation and callsign. and i say this with all respect to the repeater owner/operator.

Subject: [EastTNAPRS] Re: Digi Antenna?

From what I'm hearing in these discussions, I am beginning to wonder...

Can you adjust the kantronics TNC from remote? To do so, do you need to be using the same callsign as the TNC?

I have no preference about what callsign is on the digi. If there is value in having something other than KD4CWB, then maybe that value should be discussed with KD4CWB. Maybe he'll get his own packet station so he could control the TNC remotely in addition to the "control" that he currently has (which I presume is cut the power type of control). I would love to see another station on the

air :-)

What type of TNC are you guys going to use?

As far as remote configuration, it is very handy in setting that up so you dont have to make a trip to the digi site with a laptop. Honestly once the digi is setup and working, you rarely have to make any changes.

If you use a MFJ TNC for your digi, there is some great software that you use called UIDIGI. It turns an ordinary MFJ tnc into a super APRS digipeater. The software is burned into an eprom, and then plugged into the tnc where the original mailbox chip was plugged in. I can burn those with whatever setup you guys want, just let me know. I offer this as a free service for our neighboring aprs sites (I am in West TN, but send them about anywhere they are needed)

The KPC-3 and KPC-3+ tnc's also work great as an aprs digi. There are different versions of software and there are small changes that have to be made for the different software revisions to get them to work correctly with today's digi settings.

Hope this helps,
Richard

Richard,

Thanks for the offer & the info. We are using a KPC3+ ver 8.3.

I will be loading the TNC today & will program according to Bob Bruninga's recommendations for a WIDEn-N digi.

Thanks again,
Travis
N4TJM

for those who don't want to read the kpc-3+ book, yes the kantronics

kpc3+ model does have some neat little known features: in "ka-node" mode it can be remotely setup via a password protected link. it also can be setup as a mailbox, node, or both. also, the newer models have some ports for monitoring sensors, such as temp, backup battery voltage and any other neat sensor stuff you can configure from a forrest mims III project book... earthquake sensor? they draw about 30 mw verses the mfj's power hungry 300 mw requirement. the person who sets it up gives it a password and can set or reset it's parameters remotely. you can "connect", then check out the station's conditions and parameters without having to go up on a mountain top with a computer. a packet node can be a really neat asset to a repeater site. also, they can run off a 9 volt battery for a day or so if needed. my kpc3, an Eagle GPS receiver, and a Kenwood TH22 AT HT make up my lightweight portable aprs "tracker".
> the mfj tnc's, in node setup, require an eprom with a "burned in" X1J-4 program and callsign. with that chip installed, they can also accept an I/O board and do temp, incoming signal deviation, battery voltage, etc., and any other cool stuff you could imagine. they're stackable and could be used to gateway different bands and frequencies. also, they can be used for control or special aprs envents, etc. The X1J-4 nodes do really cool automatic routing between other X1J-4 nodes, but lack all the neat call substitution aprs routing capability that the newer kpc's have. the X1j-4 used to be supported on aprs, but are now highly discouraged as an aprs digipeater. they are fine for the qth, though.
> now, as far as the callsign is concerned, it is my humble opinion that the person controlling a station by setting up and mantaining a packet station is the "control operator" of the equipment and should be the one responsible for it's operation and callsign. and i say this with all respect to the repeater owner/operator.

2120. New digi location

Yahoo group: EastTNAPRS
Date: 2006-06-23 13:55:10 UTC
From: Travis J. Maclay
Topic: 2120 Message: 2120

Could someone please reply if you have the coordinates of the new digi location. I will need these to program the TNC today, but cannot do so without them. I could even guess & figure them out with mapping if I knew where it was going. If you are not totally sure but need to gimme coordinates for a close guess, I'll take that too. Not sure that a little bit of variance either way will make too much of a difference.

BTW, google maps' terrestrial view is useless of Greentop Mountain. Just wanted to save you time just in case.

2121. RE: [EastTNAPRS] New digi location

Yahoo group: EastTNAPRS
Date: 2006-06-23 14:00:57 UTC
From: Travis J. Maclay
Topic: 2120 Message: 2121

Actually, my best educated guess is probably:

http://www.google.com/maps?f=q
<http://www.google.com/maps?f=q&hl=en&q=35.811988+-83.666763+&ie=UTF8&ll
=35.812015,-83.666763&spn=0.001923,0.005364&t=h&om=1>
&hl=en&q=35.811988+-83.666763+&ie=UTF8&ll=35.812015,-83.666763&spn=0.001
923,0.005364&t=h&om=1

Let me know if this is correct/incorrect.

Well, I dont have a dog in this pony race.

I don't care who's call is on the digi.

I don't care who controls it, as long as it's not me.

I just want to say...THANKS.. for going thru the pains and problems of getting another WIDE-AREA digi on the air in that area.

And so you know.. NO PONE is still awaiting to be installed. .. won't do you guys up there much good, Well most of you anyway. Moe will probely get it direct.

Have fun, and looking forward to seeing your new digi "ON-THE-AIR" soon.

Travis;

If you use PHG7760 you will be very close. When the antenna is installed
and the directivity of the
antenna and power settings are finalized, it may need adjusting.

2134. Garmin GPS V

Yahoo group: EastTNAPRS
Date: 2006-07-01 23:16:43 UTC
From: William McKeehan
Topic: 2134 Message: 2134

I went to the local Bass Pro shop last night and came across what I thought was a good deal. They are selling the Garmin GPS V for $199. The receipt shows that the regular price is $499.

It comes with the following:
- automotive mount
- PC interface cable
- 12-vold adapter cable
- MapSource City Select North American v7 DVD

Looking at the Garmin web site, it looks like this unit has been discontinued.

I've been looking at these units for a while. They offer 19 MB of storage for maps and allow autorouting from the unit itself. It is a monocrome.

See the Garmin web site for complete specifications:
http://www.garmin.com/products/gps5/

In case anyone else is interested.

William
KI4HDU

PS: Be sure to check your box before you leave the store...I got home with a nearly empty box the first time.

Well, I bought a Trimble Placer 400 off eBay for $14.95 with all cables and the antenna, new. Either I bought a really cheap GPS that used to cost $1100 or a really expensive, ugly paperweight.

David Hoffman - KE4FGW

---------- Original Message ----------
Subject: [tnballoon] TABEL-3 a near perfect flight.
From: "Trapp, Terry" <ttrapp@...>
Date: Mon, July 3, 2006 6:51 am
To: tnballoon@yahoogroups.com

The TABEL-3 flight was near perfect. Though we did not meet many of our goals, problems from previous flights seem to be fixed.

Robin, K4IDC, did a great job of attaching a 10 meter microwatt beacon to the model of the Space Shuttle we were going to drop from the balloon, unfortunately the servo in the release mechanism I built, would turn a little every minute or so. This caused us to not fly the Shuttle model. We suspect RF was causing the servo problem.

We had to move the launch site to Lebanon, Tn. The reason was to keep TABEL-3 from landing in Percy Priest Lake or at Nashville International Airport.

I would like to extend a big thank you to Brian (KE4KVC), Travis (N4TJM), Shane (N4XWC) and everyone (sorry, I'm bad with names) for showing up. It was a real pleasure to have ya'll participate. Also thanks to Greg Williams (K4HSM) for sending his APRS log, Bill Brown (WB8ELK) for his predictions and advice, and George Currey (KG4OZL) for allowing us to launch in his back yard.

Several of us were able to watch TABEL-3 fall right out of the sky only 100 yards away.

Flight Objectives and Statistics can be found at
http://www.groovin.net/ke4pjw/balloon/mission.php?mission=tabel-3

We will have about half a dozen quicktime movies, taken from a camera on TABEL-3, up on the web RSN.

rotate.aprs2.net is an alias that automatically tries different aprs2 servers, so if you don't connect to it, it should reconnect and be trying a different server.

I just now checked my IGate; I've been connected to rotate.aprs2.net for over four days.

Has anyone noticed any issues with connecting to ports other than
14580?

It looks like the tier 2 servers are restricting to only this
filtered feed port.

2145. APRS TV Video Podcast Launched

Yahoo group: EastTNAPRS
Date: 2006-07-05 13:24:20 UTC
From: William McKeehan
Topic: 2145 Message: 2145

This site has some potential...especially as more video's are added.

---------- Original Message ----------
Subject: [aprssig] APRSTV.com Video Podcast Launched
From: "John Habbinga" <kc5zrq@...>
Date: Wed, July 5, 2006 9:17 am
To: "TAPR APRS Mailing List" <aprssig@...>

Several people have responded to my request for a place to store and distribute the videos for an APRS related video podcast. Thanks to their generosity I'm able to keep costs to a minimum, which is important when you are giving away the product.

The first video podcast features the Amateur Radio Society at Tech, a group of ham radio opertors that attend Texas Tech University, launching a high-altitude weather balloon loaded with several amateur radio payloads, including an APRS tracker.

You may visit http://www.aprstv.com to download the first video in the Quicktime movie or iPod formats. You will need the latest version of the Apple Quicktime Player or iTunes to view the videos. As the episodes get archived I'll provide some lower resolution video in other formats.

If you have iTunes installed on your computer, visit the following link to view the APRSTV iTunes page. Please write a review if you are so inclined.
http://phobos.apple.com/WebObjects/MZStore.woa/wa/viewPodcast?id=164018864
(link will not work if iTunes is not installed)

Anyway, that's about it. I hope you enjoy the podcast. If you have a suggestion for content or about how to make the show better, please let me know. Also, if you have video that is related to APRS, I'll see if I can get it featured on the podcast.

2146. MCARC (McMinn) 2nd Annual Hamfest, July 15th

Yahoo group: EastTNAPRS
Date: 2006-07-06 03:24:28 UTC
From: Scott
Topic: 2146 Message: 2146

Hey folks,

Be sure to mark on your calendar Saturday, July 15th, the date of the 2nd Annual MCARC Hamfest. It will be located at Athens Regional Park, Athens TN. Directions are, take I-75 Exit 49 (Athens) and turn East on Hwy 30 towards Athens. Travel 7/10 mile (+/-) and turn right into Athens Reginal Park. Follow the signs! One of the easiest to find in the South East!

Talk in will be on 145.310(-)141.3

All paved tailgating area, breakfast, snacks.

There is currently an APRS Object (Hamfest with Yellow DF Triangle) making the spot.

See http://www.qsl.net/kf4cfo and click "Hamfest" for more info.

Hope to see all of you there.

I don't know if I really understand what problem your having with the
maps. If its "making" the maps or getting them "onto" UI view.

The maps I use I just drag from my desk top and drop them onto open
UI view then input the long and lat for reference and BANG there it is.
I dont know alot about how but it works
73 hope this helps Jay KI4MZG

Topic: 2129 Message: 2149

I think what he may be talking about is getting them to show up in the "MAP LIST". Once you make a map, in UI-VIEW32 go to "Maps" and click "Refresh Map List". Your map shoudl appear there.

Also, when you close and restart UI-VIEW it does the same thing.

2150. Clarification needed RE: MC Bike Ride Aug 26-27

Yahoo group: EastTNAPRS
Date: 2006-07-09 17:48:36 UTC
From: Scott
Topic: 2150 Message: 2150

I need a clarification. I have notified that the MS Bike Ride is Aug. 26-27. I have also been notified that the Blount County Emergency Communications Service is not going to participate this year. Am I to assume that the APRS folks are not participating either? I would like to know by Monday July 10th, 4:00PM if possible. I have to present the ride to the McMinn Co Amateur Radio Club and this information will affect what we do.

Scott;

Is the ride planning to use APRS this year?
What route will be used? Last year the rest stop I worked was really
close to my house.
Will there be any trackers mixed in with the riders?

(I had tried to send this last night, but it never posted...)

I really don't need a count per se of folks. What I need is if there is going to be some participation from someone who knows Blount Co. I have to know that before I ask the McMinn Group to commit to the ride. Most of our folks no little about Blount Co.

(And I found the answer last night on the APRS net...)

I hope to find out some further info today, and what the MS folks response is to Blount Co ECS pulling out. They may decide they don't want amateur radio at all after that.

I'll post as needed.

Bob;

You should set your Unproto address to:

WIDE1-1,WIDE2-1 if you want 2 hops or
WIDE1-1,WIDE2-2 if you want 3 hops.

The TN & NC digi's in the area will all support either path

Note; Relay,Wide will not work in that area very well.

Yahoo group: EastTNAPRS
Date: 2006-07-11 15:49:43 UTC
From: Tom Keeble
Topic: 2161 Message: 2163

Here is another source of information for GPS receivers, cables, and an assortment of accessories.

http://www.byonics.com/tinytrak/gps.php

The Deluo, Garmin, and GlobalSat BR304 hockey puck GPS receivers require +5VDc with a 6volt maximum. I use the Deluo with the TinyTrac3Plus APRS Tracker and it works well. However, the 5volt regulator mounted inside the tt3+ does get hot and requires ventilation. Solution.drill four holes in the top of the tt3+ and leave the cover loose. When it fails, replace the TO-220 7805 regulator using bench repair anti-static techniques or you will also replace the microprocessor.

I work barefoot and use a wrist strap made of duck tape.

2165. MS Bike Ride August

Yahoo group: EastTNAPRS
Date: 2006-07-12 03:01:52 UTC
From: Scott
Topic: 2165 Message: 2165

I have heard nothing in return from the MS folks about the ride.

The McMinn Co club in it's July meeting decided to do pretty much as we did last year. We watched the route inside McMinn Co only.

We did have our trailer at Union Grove Baptist in Blount Co, but it really isn't needed, and the only plus it really gave was the telephone service in it, and we have since lost that service, due to refarming of the 800MHz band to Nextel, and the company that furnished it had to turn their service off to everyone on their system.

We will have a station at Mayfield's, who will probably be NCS for the ride as long as it is in McMinn Co at Mayfield's.

We have done no assignments, and are waiting to hear back from the MS folks.

As a side note, I may not be involved in it this year. Several reasons:
(1) My wife & I may be in Louisville KY seeing our grandbaby that is to be born this month.
(2) My church duties as technical director for Zion Hill Baptist have increased that I pretty much need to be there, if not out of town.
(3) With my disablility, I have started having to curtail a lot of things I used to do, simply because I get too tired and hurt too much.

I'll post updates as I hear them.

I can sum it up in one sentence.

It makes a really ugly paper weight...

Don't do NMEA.

Anyone need a fancy, used to expensive, new, never installed, GPS antenna and cable with SMB female connection? The price is right...

Topic: 2169 Message: 2169

The McMinn Co Amateur Radio Club, Inc. has a new website URL.

It is http://www.mcminnarc.com .

We had a lot of problems with the old site, and hopefully this one will be more reliable. I know some of you have used the MCARC's APRS guides on the site, and they are also on this new site, as well as a lot of other good stuff.

(William, you might see if you can update this info in the "Links" section of the group.)

2170. **Net Discussion / MS RIDE August 26 & 27

Yahoo group: EastTNAPRS
Date: 2006-07-16 18:20:04 UTC
From: Scott
Topic: 2170 Message: 2170

Hey folks, especially Blount Co hams.

I can't make the APRS net because of church. But, could you bring up for dicussion the MS Ride? We need a contact person for Blount Co for the MS Folks to contact. Once you can establish that person, I will get them in contact with the MS folks.

There are 4 rest stops in the Blount Co portion of the ride. It might be good to watch the "bad" intersections if possible. Someone will need to handle NCS duties while riders are in Blount Co. Those are the "must haves" to make the ride work. Anything else would be "icing on the cake".

The Chattanooga group will be handling SAG from end to end both days.

McMinn Co will handle only McMinn Co, same will probably be true in Monroe Co, as they have a limited number of operators. (I should know more later this week.)

Last year, the riders requested that no one "follow" them. That is why we went to a "watch" mode.

Not trying to be bossy, you folks run your end, just trying to get some info for the MS folks.

Thanks, Scott NA4IT

Scott;

Thanks for the update.

Is McMinn County or Monroe County planning APRS coverage?

Thanks

Monroe, probably not, no one except Charlie Satterfield has APRS mobile, and he isn't available that weekend.

McMinn is maybe, we have the units, but we will need to see who can work the event. Remember, our folks are old or decrepid or both!

I'll let you know when I find out!

Scott;

I was NCS for the APRS net tonight. We had a very light check in tonight.
The contact person for Blount Co. is not yet identified.

Maybe someone reading this message will respond.
We still have some time before the Ride.

I know what you mean about old and decrepit. I have to chose my events.

I enjoyed the Hamfest Saturday.

Jay,
nope, not losing your mind...just one of the cool facets of APRS packet radio. you copied the space station's digipeater if you were on 145.800... here's a good link:
http://web.usna.navy.mil/~bruninga/iss-faq.html
you can track them with tracking software or via the internet and work them when they come over with as little as a 1/4~ and 1 watt QRP. the uplink is an odd split.. 145.990 up(Packet). .. 145.800 down(voice and packet, and sometimes slowscan tv). also, listen first before sending packets as they may be talking to someone local... maybe you? good luck!

There is a whole world of things in amateur radio for even technician class hams to explore. I recommend if a tech class ham can afford it, but an Icom 706MKIIG or something similar and try out 6M FM and SSB DX, and also 2M SSB. It's a ton of fun. (6M PSK31 is wild!)

Sound like you may not have your APRS server validation number put in the box for it.

Also, if you have a station in your house hooked up on APRS on the internet, I think the only way you can run one in the shop with the same call is to run a network and setup one machine as a "Local APRS Server". The info on this is in the UI-VIEW help file.

That was it. Turn the server on the house system and add the ip to the server list on the shop system. Now to get the packet engine software to work on RF.

Good luck. I have never gotten that thing to work. We did get it to work on a friends system, but it would only do so for a few hours, then eat up so much memory the system would lock up.

Kevin KF4YMC has done it successfully. Might contact him for info on it.

Attachments: 1 described; binary payloads are missing from this source WARC

More info on the TABEL-4 flight.

David Hoffman - KE4FGW

---------- Original Message ----------
Subject: [tnballoon] TABEL-4 Early Report
From: "Bruce W. Martin, KQ4TV" <yahoo@...>
Date: Sun, July 23, 2006 11:23 pm
To: Balloonatics@yahoogroups.com
Cc: tnballoon@yahoogroups.com
"NLUG ListServ" <nlug@...>

TABEL-4 launched during a brief lull in some 10 knot gusts. Launch was
at 1422 and landed at 1644.

Payloads (Including parachute) Pounds Ounces
Parachute 0 14
Beacon 0 4
Tracker 1 1 13
Experimental Payload 4 5

Total Payload 7 4

Filling Assembly 1 10
Desired Free Lift 2 8

Scale during inflation should display 8 2

Looks like we had 2.5 lbs of free lift as desired.

Landing was at 1644 20070724, @
Decimal Degrees: 36.16350N 86.27883W
Degrees/Decimal Minutes: 36 09.810N 086 16.730W
Degrees/Minutes/Dec. Seconds: 36 09 48.6N 086 16 43.7W
Universal Transverse Mercator: 16S 0564863 4002324
Military Grid Reference System: 16S EF 64863 02323
Maidenhead Grid Locator: EM66ud

Much closer to the launch point than predicted. It is up in a tree and
we are gathering the tools to retrieve it now.
A more detailed report to be sent after recovery.

From: Scott
Topic: 2185 Message: 2186

UI-VIEW32 hands down. It has to be registered, but the cost is a promise to donate to Cancer Research.

It has a D7 and a D700 command file built in, although you need to edit the frequency, as the one in it is the UK frequency. (Easy to do.)

I run UI-VIEW32 with Precision Maps Version 7, PM MapServer 7, and NWSGet. I also leave the UI-NWS that come packaged with UI-VIEW32 running for weather warnings.

I am a base only operator, but have seen the same setup run with the HT. Be in distance of a digi and Igate and you have it licked.

The GPS can be left hooked up to the D7 and feed the UI-VIEW32 through the built in TNC in the D7.

I think you will find UI-VIEW32 easiest for a newbe to APRS. Also, see http://www.mcminnarc.com and click on APRS for TONS of info on APRS and UI-VIEW32!

From: William McKeehan
Topic: 2185 Message: 2187

I would agree with Scott, NA4IT.

UI-View32 is probably the easiest, most featurefull APRS software available today. It has the ability for people to write add-ons for it which further enhance it's base capabilities and add lots of functionality.

You can use just about anything image for a map with UI-View and if you want to spend a few bucks, you can buy Precision Mapping for some really nice maps.

UI-View should be easy to connect to the D7.

Links for downloading UI-View32 (and some other programs) are in the Links section of this group.

Several people in this group use UI-View, and should be able to answer any question that you encounter.

2189. Mapping, assistance with UI-View

Yahoo group: EastTNAPRS
Date: 2006-07-30 05:31:46 UTC
From: Greg Williams
Topic: 2189 Message: 2189

Does anyone have a Mapping program for UI-View? I had a major HD crash 3 weeks ago and lost my HDD, my mapping program, and UI-View and need a copy of a mapping program to get my APRS in full swing. Fortunately I had my code for UI-View and was able to register that program.

Also, need help with the core settings I should have to set for UI-View. I'm transmitting and receiving stations, but I'm not sure what exactly I'm sending out.

Thanks.

Greg

Topic: 2189 Message: 2190

Greg,

Take a look at the APRS link on http://www.mcminnarc.com . Maybe that will help on the settings.

Maybe someone in your area will loan a mapping program copy. You can find versions of Delorme Street Atlas on eBay fairly reasonable, sometimes even with the little Delorme Earthmate GPS (UI-VIEW32 does have settings that make it work with UI-VIEW32). As far as map software, UI-VIEW32 will work with Street Atlas V4, V5, V6, V7, V8 and V9.

And of course, if you have a fast machine, Precision Maps 7 and PM Map Server 7 is the Cadilliac way to go! But also a little pricey.

Topic: 2191 Message: 2191

Please post on your web site or pass to other hams

Live Video and Audio of the Huntsville, Al Hamfest weekend of August 19th and 20th

Many of you watched us Broadcast the Dayton Hamvention in live streaming video and audio this past May. Now you can watch us as we travel to the Huntsville, AL Hamfest. This is the big event for hams in the Southeastern United States. It will be at the Huntsville, Alabama's Von Braun Center
700 Monroe Street SW.

As many of you are aware, this is a great way to take part in a great ham radio experience even if you can not attend. Watch the live video and chat with other hams across the U.S. and even the world. Our last broadcast was viewed by hams in over 152 countries. The web site is http://wa5kub.com

We will be broadcasting from the Hamfest all day on Saturday Aug 19th and again on Sunday Aug 20th until closing at 2:00 PM. At times the camera may be in a fixed location showing the entire fleamarket but at other times we will be wearing the ?Helmet Cam?. With the Helmet cam, you will actually be walking around with us and visiting all the exhibitors.

As on our last trip, we plan to try to broadcast live our drive to Huntsville. This will be the first year we have broadcast the Huntsville Hamfest so we don?t know exactly how well that part will work. Im sure we will have coverage on much of the trip but we might lose the signal in some parts of the drive. Even if we lose the connection, each of you will still be able to continue on the chat room on the video page. When we re-establish the connection you will see us reappear on the video. We also plan to transmit video after hours from the hotel. Who knows what we might find. On the website, I have tried to list a schedule of approximate times where we think we will be as we go down the road. We should be driving to Huntsville on the Friday evening and again back to Memphis, Tn Sunday afternoon. On the map you can see where we have coverage (violet color) and where we lose coverage (red color). Please watch for this schedule on http://wa5kub.com . I will try to update it as we finalize the exact times.

For more information on the Huntsville, AL Hamfest go to Http://hamfest.org

Please help us spread this word out to all hams. Send it to your clubs and friends.

Thanks and hope to see you there.

2196. EMWIN Decoding

Yahoo group: EastTNAPRS
Date: 2006-07-31 12:54:51 UTC
From: William McKeehan
Topic: 2195 Message: 2196

Good question.

I have not been able to find much information about it to even know what frequency it may be on locally (if at all). It sure seems like being able to receive and decode the data stream from RF would be a great tool - that would eliminate relying on the internet to get NWS warnings, watches, forecasts, etc.

Anyone else looked into it?

Topic: 2195 Message: 2198

Amazing that someone would bring this up.

There used to be an EMWIN "node" in Oak Ridge. THe website for info on it is http://www.oakridge.doe.gov/EMWIN/ . To describe it simply, it is a "conversion node", taking satillite data and converting it to 9600 baud and TXing it.

Now, problem is, that one is 9600 baud.

There were some nodes, although I don't think around E TN, that did 1200 baud. Sounds like a TNC would fit the bill, right? Not quite...here is a web page that describes the mod that you can do to a PK-88 to capture 1200 baud EMWIN...
http://home.comcast.net/~jrgalvin2/pk88.html .

I have a copy of the software. I don't remember how long I have had it. It is "WeatherNode 4.0 EZ". I did a search, and there are some versions, which I assume are not the "EZ" versions for $79.95. But...

On this website, there is a link to download the "EZ" version...
http://www.lehighema.org/downloademwins.html and look for "WeatherNode 4.0". It is a 7.7MB download!

The software works very well if you have a hi speed internet connection. It gives you all kinds of weather data, and allows you to set up alarms and such. It will work with dialup, but takes several hours to get fully updated with all the weather data across the US. The hi speed 24/7 connections are better suited. I have never used it with an RF connection, as I don't have anything that will do 9600 baud.

Just like Radio Shack used to be, U got questions, We got answers!

Hmmm...I wonder, is the satellite signal in an unencrypted format? That would be a really cool way to receive the data, then you're not dependant on being close to an EMWIN node - sounds like it would be a great addition for an EmComm trailer.

I'm not thinking about re-transmitting the information on APRS (OK, I'm thinking about it, but that's my second consideration), but having the information available in general. It looks like there is software available:

The EMWIN-N prototype OQPSK receiver software is now available (http://www.nws.noaa.gov/emwin/EMWIN-N%20OQPSK%20software.htm).

that appears to work similar to a SoundCard TNC. I've not had time to check it out yet, but it is interesting.

Moe,

I don't think this weather data would be what you want to broadcast out over APRS. It is not meant to do that. It would take a specially written piece of software to decode and filter it for APRS, and probably permission from the NWS to use it. The data is meant to be used with a software package to provide constant weather data for all over the US to one location, say an EMA office. Or a Skywarn NCS...

Download the WeatherNode 4.0 software, and you'll see what it does. You can do an internet connection with it. It will take something like 4-6 hours on a hi-speed connection to update all the data it can show.

I failed to mention, the WX data that EMWIN receives is the exact same data that WXSVR gets and retransmits to APRS. Exact same. No one but the good ol NWS puts that data out. Accuweather, WBIR, WRBC, the Weather Channel, all get the same data. They just "pretty it up" to sell it to the public, and most claim it is theirs...

I did some more reading after I sent my last post. The "EMWIN-N prototype receiver specification" document:
http://www.nws.noaa.gov/emwin/transition/EMWIN-OQPSK%20Specifications%20Final.doc

goes into great detail about how all of it works...very interesting stuff-they even give you a schematic and parts list for building a "IF Adapter" to connect a satellite dish to your sound card, then they give you software to translate the broadcasted information.

It looks like they have a couple of protocols out and operational right now, they are in the middle of a transition from a 9.6 to 19.2 kbps and changing from "Frequency Shift Keying" (FSK) to "offset quadrature phase shift keying" (OQPSK).

It's all well beyond my skill and knowledge level, but very interesting.

Everything I can find says this thing has no PC interface, without that, you can't get any data out of it, so it would not work for you.

From: William McKeehan
Topic: 2210 Message: 2211

The Kenwoods in APRS mode only send MIC-E position packets. It's an option on the TinyTrak3 (it's the setting that I always use).

If you look at a MIC-E packet, you can't easily decode it, uncompressed packets allow you to see the lat/lon in a human readable format.

The MIC-E format has been around for a long time, so I would be surprised to find an APRS client that is not able to decode them.

Barry's winning answer:

Collin, almost any laptop that you buy will meet your minimum needs. However, I can make some recommendations.

The laptop market is undergoing dramatic changes right at this very moment. My answer to you today is different in some regards than the answer I would have given to the same question just 3 weeks ago. What appears to be happening RIGHT NOW, is that laptop vendors and retailers are both "clearing the decks" for the introduction of laptops using the Intel "Core 2 Duo" processor, which was previously known by it's code names "Conroe" and "Merom". The desktop version of this radically new CPU (Conroe) is out right now, although not all models are actually shipping and supplies are short. The laptop version, which was code named "Merom", will begin appearing in late August. This processor is the greatest advance in CPUs in 6 years, and it is both more powerful (a LOT more powerful) and lower power than anything previously offered by Intel or AMD.

As a laptop buyer, there are two ways you can take advantage of this:

-Wait for a laptop using Core 2 Duo (Merom)
-Buy now and get a true bargain on a current model

The intensity of the pre-Merom price cuts and discount is almost breathtaking. Sixty days ago, a "Centrino" system was AT LEAST $799. Today, $549 to $599 is not hard to find if you look, and this is in systems with other advanced features as well as the Centrino chip system. There are lots of coupons, lots of discounts, lots of rebates. Best Buy has a coupon for $100 off ANY laptop, good to August 19th, at:

<http://emailinfo.bestbuy.com/pp/editor_NET/v3/CampaignWrapper.aspx?E=5698;188232;765145480;1;02&R=T1_CMP_5684&A=1007&ci=5684>
http://emailinfo.bestbuy.com/pp/editor_NET/v3/CampaignWrapper.aspx?E=5698;188232;765145480;1;02&R=T1_CMP_5684&A=1007&ci=5684

[I have no connection with Best Buy, but it's a good example of the promotions that are going on right now.]

There have been fantastic deals at Best Buy, CompUSA, Office Depot and Circuit City; you can get terrific laptops with advanced features for $549 to $699, and possibly even for $449 or $499. These are not stripped down models, you can meet ALL of my suggestions below in these price ranges.

IF, that is, you don't feel that you have to wait for Core 2 Duo and that you will be satisfied with current technology.

Another consideration is Vista, the new operating system coming from Microsoft coming out next year. Just about any laptop that you buy today will run Vista (you may have to add memory), but the real issue is Vista's "Aero" interface. All laptops will not run Aero, so if you buy now, be sure to ask about this if it is important to you. If you can wait (ah, back to the waiting game), you will probably be able to get a laptop this fall that comes with XP installed and a coupon for a free upgrade to Vista next year. This could possibly be the best of both worlds ... again, if you can wait.

[Unfortunately for all students going off to college in August and September, both Vista and Core 2 Duo are really both happening too late for most of these students to be able to wait.]

Anyway, here are some general suggestions:

1. Buy a "Tier 1" laptop only .... made by the major manufacturers. Personally, I'm partial to Toshiba, Dell and Lenovo (the IBM Thinkpad line). There are several other Tier 1 vendors (Acer, Sony, Gateway, HP/Compaq and perhaps I missed one or two). But I would not buy a "2nd Tier" or "3rd Tier" laptop. Parts, service and support issues are just too important on a laptop.

2. At this point, don't buy a laptop using a Celeron processor. There are just too many good deals right now on models with "full performance" CPUs. Go for Pentium M or a "Core Solo" or "Core Duo" CPU (note, "Core Duo" is an older CPU and is not the same as "Core 2 Duo", the new CPU coming next month). Any of these CPUs will meet typical needs, but obviously more money (and not much more) will get you a faster CPU. But note that in a laptop, a faster CPU often means shorter battery life and more thermal issues.

3. Get a model with a DVD BURNER, not just a "combo" drive (burns CDs but only plays, does not burn, DVDs)

4. Get at least 512MB of memory, and preferably a gigabyte (note, however, you can expand this yourself later if needed, and it's cheap to do ($30 to $50))

5. Get at least a 60 gigabyte 5400rpm drive, but in general the larger the drive the better. I don't know how you will use the laptop, so I can't say how much space you need. Drives are available up to 160 gigabytes, but the cost really starts to climb fast past 80 or 100 gigabytes. Similarly, 7200 rpm drives are faster than 5400 rpm drives, but the cost skyrockets.

6. Get a laptop with internal wireless networking that supports at least 802.11b and 802.11g (almost all will today)

7. Card slots: Some laptops have no or only one single expansion card slot. Some manufacturers have totally replaced PC Card slots (incorrectly called "PCMCIA Card slots) with "Express Card Slots". Personally, I think that this is premature, and the arrangement that I prefer is that found in some Toshiba models (the A105 in particular) that has two card slots, one of each type.

8. Pay attention to the video display system, especially if you want to run Vista with Aero next year. Chipset shared video systems CAN be ok, but not all are. Look for at least 128 Megabyte memory capability and support for "Pixel Shader 2". Intel GMA 950 is ok, but GMA 900 won't run Aero due to lack of a driver (which may or may not get fixed). Discreet video systems by ATI or NVidia may or may not run Aero. If you get a video system that uses shared memory, then the need for a Gigabyte of memory (instead of only 512 Megabytes) becomes far greater.

9. The screen is too personal a choice for anyone to give valid advice; there are normal (4:3 aspect ratio) and "widescreen" displays, matte and shiny displays, and different resolutions. It's a personal preference. There is no one single "best".

10. You also need to consider size; is it going to be traveling much? There are compact laptops (with screens down to 12") and there are laptops with 17" screens that are almost too big to fit in most laptop cases. It's all personal preference.

11. If you buy a Dell laptop, spend the extra $10 to get a restore CD. For other models, find out what type of restore provision is included. Personally I avoid models whose only restore capability is from a hidden partition on the hard drive. Toshiba still includes restore CDs (actually DVDs) on all models, as far as I can see. Dell, as noted, uses both hard drive partitions and an optional (extra cost, $10) CD (but ordering it is obscure and most buyers miss the chance to get the CD). Many if not most other brands/models use a hidden restore partition, which is useless if the hard drive itself has failed.

And a final comment: Although I'm no fan of extended warranties in general, for laptops in a student environment, they can make a lot of sense. But there are some rules. Here are my additional recommendations for extended warranty rules:
1. ONLY buy the extended warranty directly from the manufacturer, not from the store where you bought it. That excludes some brands, but the manufacturer extended warranties have proven to be better than the store warranties, in my experience.

2. ONLY buy an extended warranty that includes "accidental damage coverage", so that you are covered if the screen is cracked, the laptop is broken or you spill a liquid into the laptop. Again, that excludes some brands (and it may exclude buyers in some states that define an extended warranty plan as insurance and require it to be sold by licensed insurance companies and agents).

If you buy a laptop from Dell or Toshiba, 3 years of extended warranty coverage with accidental damage coverage will run you about $220 to $290. I have not checked rates or availability from other vendors. Note that even from Dell and Toshiba, not all of the extended warranties have accidental damage coverage, so know what you are getting. Most laptop repairs past the first couple of months are due to accidental damage, not to "normal" component failures.
Best of luck, this is a great time to be buying a laptop.
Sincerely,
Barry

2219. D700 Locking

Yahoo group: EastTNAPRS
Date: 2006-08-12 01:37:33 UTC
From: William McKeehan
Topic: 2219 Message: 2219

I came across a setting in the D700 that I had overlooked before. It seems like a very handy thing to use with the D700.

TRANSCEIVER LOCK
Transceiver Lock is suitable for a typical mobile installation where you alter most functions with your microphone. This Lock disables all functions excluding the following:
PWR switch, [F], [F][MHz]
SQL controls, VOL controls, Mic keys
Press [F], [MHz] to switch the function ON (or OFF).
☐ "LOCK" appears when the function is ON.

ALL-CONTROL LOCK
All-control Lock is ideal when you have no plans to transmit but you want to monitor a specific frequency. This Lock disables all functions excluding power ON/OFF and All-control Lock ON/OFF. After switching Transceiver Lock ON, switch OFF the transceiver, then press [MHz]+ POWER ON to switch the function ON (or OFF).
☐ "ALL LOCK" appears when the function is ON.

2220. UI-View maps

Yahoo group: EastTNAPRS
Date: 2006-08-12 05:09:46 UTC
From: Greg Williams
Topic: 2219 Message: 2220

Hello gang:

As you may know, I lost my HDD 3 weeks ago and lost my pmapserver files. I've been trying to get my system up to where it was but down have the Streets & Traveler program. In the meantime I'm trying to get some maps of Knoxville and East Tennessee.

I went to the Yahoo Groups page and downloaded several UI-View maps. I extracted to the maps folder in the UI-View directory, however, when I open UI-View, They are not listed in the dropdown for MAPS in the toolbar.

I downloaded maps from another web site for other areas (North America, UK, Africa) and I can see them in the dropdown with no problems.

I checked the inf files that list the coordinates, and cannot find anything out of the ordinary.

Any ideas, suggestions?

Greg Williams, K4HSM

Hey Greg,

Anytime you add maps to the map folder, no matter how you do it, in the main UI-View window, you have to go to "Maps" and click "Refresh map list". It will also do it when you shut down & restart the program.

Hi Scott:

Well, as I was typing out a response that I didnt have the "refresh map feature", I look and I'm running the 16-bit. DOH!

Installed the 32-bit flavoer and now I have maps. Now I need them to be for East Tennessee...I'll work on that one...

Forget about me...I'm a moran...just move on without me...

I broke down and went to Google Earth, then I looked over the UI-View inf files and figured out how to create one in just a few mins. I snagged some screenshots of various areas and made them into UI-View maps.

There are several maps, with and without gridlines, of Knox County, East Tn, East Tn and region, and the TN/AL/GA area to includ Nashville, B'ham, and Atlanta.

I will totally agree with you; with digital communications, the entire packet must make it or it's all thrown away. It's not as forgiving as voice where you can hear some noise, but still get the message. APRS has forced me to learn a lot about antennas and as a result, I have upgraded every antenna that I use for APRS over the past six months.

2229. 1/4 wave antenna testing in Memphis

Yahoo group: EastTNAPRS
Date: 2006-08-14 22:31:17 UTC
From: William McKeehan
Topic: 2229 Message: 2229

Well, I had great plans to try a 1/4 wave mobile antenna for my time in Memphis this week. I had everything packed up and it all made it to the airport with me, but that's as far as the GPS came. I left my GPS in the truck, so I will be able to test the antenna with voice communications (which so far seem a bit better than my previous antenna), but not with APRS this week (well, I could do some testing, but it will be easier for me to analize once I have the GPS with me).

Hopefully on my next trip I'll remember everything...then a trip after that I'll try the 5/8 wave and see if I can tell the difference.

Don't expect to see me mobile this week...but the laptop will be on from time-to-time.

2233. Sunday night net

Yahoo group: EastTNAPRS
Date: 2006-08-21 01:03:25 UTC
From: William McKeehan
Topic: 469 Message: 2233

If you did not make it to the net tonight, you missed a pretty good one.

Joe talked about the WX station that he's working on. You can get more information at www.rxcomm.net or Joe's web site, www.KG4UJC.com.

Tim Berry, the repeater owner of the 146.94 repeater that we use for our events announced that he has a new web site (WB4GBI.com) that tells about the repeaters that he maintains (locations, equipment ,etc.). This site looks really nice with lots of information, check it out.

We had 18 checkins with 9 via APRS and another 6 stations on the list that are APRS capable. One was from Mineral Wells, Mississippi.

Hope to hear you on the net next week.

From: William McKeehan
Topic: 2235 Message: 2235

Turn up the volume on your 144.39 radio this evening and see if you hear anything. Either WA4KJH-7 is having problem or there's something on the frequency causing him to not transmit.

Please report your findings here so we can compare.

Another tid bit of info...

For those of you running something like WIDE,WIDE2-2 or
WA4KJH-7,WIDE2-2, when KJH went down, so did you.

The stations that are running WIDE1-1,WIDE2-2 or just WIDE2-2 are
still there.

The old system will always respond to the WIDE portion of WIDEn-n, and
give you one hop. The new system WILL NOT respond to the old WIDE.

Trying to educate and help.

Scott;

Are you sure that a Digi set up to digi WIDE will digi WIDE2-2.

I don't think any of my equipment will, unless I set it to digi WIDE2-2 also.

That is just not true.

If that were the case WA4KJH-7 would have digi the WideN-N
and not needed a wide as the first item in the path.

I agree with the settings for mobile and base stations, but I don't understand the difference for an IGate.

Can you explain why you suggest something different for IGates stations?

I have not seen a single packet digi'd by WA4KJH-7 today. I suspect that WX4MRX is hitting an IGate directly and that's how you're communicating with it.

You should be able to tell how you're hearing WX4MRX by looking at your terminal window or by logging and looking at the contents of the log file.

My opinion is that on a fill-in digi, neither WIDEn-N nor the TRACEn-N options should be selected.

Just make sure WIDE1-1 is on your alias line.

Scott, you guys have played with this more than I have, what's your opinion?

Hi guys,

KE4RLK notified me this afternoon that the digi was not responding and asked if I could IGATE traffic to and from WX4MRX. I turned that on about 2pm this afternoon and I have seen some traffic to and from that station. That may be the route that you are going. I did not turn on logging until this evening.

If ever in case of trouble you need something like this or a backup digi let me know and I will do what I can to help.

2255. Working on weather station interface

Yahoo group: EastTNAPRS
Date: 2006-08-24 02:59:03 UTC
From: tennesseestargazer
Topic: 2255 Message: 2255

I made a cable for the weather station to radio connection. I put the board in test mode to trigger transmit every 3 seconds. The radio is transmitting, but I don't see it showing up in ui-view. How long does it take for a station to show up?

Also, the documentation on the board is poor. I setup mode, one question is about digis, how many and callsign and ssid. Any ideas on this? I tried the calls and ID of a couple of the digis showing up on ui-view near me.

2256. Re: WIDEn-n...what works

Yahoo group: EastTNAPRS
Date: 2006-08-24 03:04:15 UTC
From: Scott
Topic: 2246 Message: 2256

Well, here are some snippets from other websites dealing with Igate setups...

"The Igate at most should be WIDE2-1 or WIDE2-2. However, given that the igate is connected to the internet it stands to reason that it does not need to be digi'd in order to show up on the the various APRS applications. Thus, if the Igate station can hear and talk to a Wide Area Digi, then a WIDE2-1 should get it to that digi, be heard and then beaconed."

"IGATE's should be mostly passive; perhaps just sending out beacons/messages for local (<30 miles) stations who are not on RF."

"IGate operation can be difficult, at best. It requires coordination with other IGate operators in your area to ensure that adequate coverage is obtained with a minimal amount of duplication. An IGate should be set for the minimum number of hops necessary to cover the intended area. It should only gate to RF for stations heard within 1 hour (or less) and within the intended coverage area."

(End of quotes.)

If an Igate uses the default UNPROTO settings of someone station, then it is simply putting out too much traffic in too wide of an area. Igates are meant to be "local" i.e. lass than 30 mile radius.

I am open to reasoning as to why an Igate would have to have a WIDE1-1,WIDE2-2 path, but, I think when someone does that, they are not considering the effects of what that Igate does say 100 miles away.

There is one Igate we have had to exclude from KG4FZR-7 because of all the duplicate packets KG4FZR-7 was receiving from it, which were in turn keeping the KG4FZR-7 digi keyed up for over 1 1/2 minutes at a time. At times, our local stations couldn't even use APRS to send beacons or messages because of that. Since we did the exclusion, we don't have that problem.

KG4FZR-7 is a "local" Igate. It takes in all RF traffic and sends it to the APRS servers. I also sends local station's beacons and messages out with an "RFONLY" hop, i.e. it keys up and sends the traffic out with no digipeats. It also sends out MRX and SPC objects the same way.

WA4YYM in Cleveland is also setup the same way. It also sends out MRX, SPC, and HUN objects, with a "RFONLY" hop. And sure, I see WA4YYM and KG4FZR-7 when a MRX or SPC object comes through them, because I hear both at over S-9. But, those objects are not digipeated anywhere, so it is not an issue.

As I have tried to point out, use WIDEn-n, and setup the "necessary" fill in digis and Igates right, and you will like what you see. APRS will become much more functional. That said, not everyone needs to be a fill in digi. For sure, not everyone needs to be an Igate. As I said in an earlier post today, if an Igate is in a bad location, it doesn't need to be an Igate. (RX only Igates can be anywhere.) Igates need to be promineint, but still "local". As stated in one of the quotes above, an Igate at the most could have a WIDE2-1 UNPROTO only if absolutely needed. That gives it a hop to one digi only. The rest of the time, the "RFONLY" hop works best.

2257. Re: WIDEn-n...what works

Yahoo group: EastTNAPRS
Date: 2006-08-24 03:15:05 UTC
From: Scott
Topic: 2246 Message: 2257

A "fill-in" digi is a digipeater that responds to the old "RELAY" or the new "WIDE1-1" depending on which system it is used in. Neither the TRACEn-n or WIDEn-n should be active.

"Alias Substitution" should be checked.

In the "Alias(es)", you should have the "call of your APRS station",WIDE1-1 and nothing else. I.E. the Alias box would look like these examples:

URCALL,WIDE1-1

or

URCALL-#,WIDE1-1

DO NOT put anything else in that box. No WIDE2-2 or anything. Only do as above.

In the "Sub Alias" you should have the call of your APRS station, hence these examples:

URCALL

or

URCALL-#

I would set the "Dupe Seconds" to about 15.

2260. Setting up the WIDEn-n

Yahoo group: EastTNAPRS
Date: 2006-08-24 03:58:19 UTC
From: Scott
Topic: 2260 Message: 2260

I have uploaded a pdf file named WIDEn-n.pdf in the Files section of this group. It is about 168kb. It has instructions and screen shots how to set up for the new WIDEn-n in UI-View32. Others should be able to decipher how to setup ARPS-SA, etc.

Remember, not everyone needs to be a fill-in digi. Only the folks who are fill-ins need to set up the digi portion.

I did not include Igate instructions because only those who fully understand Igate operation need to tackle that.

Scott NA4IT

2261. Re: [EastTNAPRS] Is this the route? (WIDEn-n)

Yahoo group: EastTNAPRS

From: William McKeehan
Topic: 2252 Message: 2261

This has been the direction that we've been moving for a while. All of the fill-in digi's have been requested to setup to support both the old and the new (i.e., RELAY and WIDE1-1) and we've been working on putting up a new digi that will support WIDEn-N (should happen any day now).

With KJH going down, we have no reason to wait on converting.

IN FACT, Roy has done some driving around recently with a path of WIDE1-1,WIDE2-2. He generally gets digi'd once (sometimes more) and gets a packet to the internet. The thing that he noticed is that by using this new path, he is able to take advantage of the digi's just outside of our area which do not support the old RELAY path. So as of this point, the PATH of WIDE1-1,WIDE2-1 seems to be working better for mobils than the old RELAY,WIDE path.

OK, an IGate has one more PATH setting from a regular station; the PATH that it uses when it takes something from the internet and puts it out to RF.

I totally agree that this path should be, at most, WIDE2-1.

Thanks for the text to help clear this up for me.

If you look at messages from KI4HDU, you'll see the same thing. It tells me that the Unproto Address in UIView for WX4MRX is set to

APRS,WA4KJH-7,WIDE2-2

And he's being heard directly by AF4MS.

If you can, I would suggest that you change the path to WIDE1-1,WIDE2-2 now (I'm sugggesting a longer path than a normal base station because of the importance of this station). This will also help with some changes (i.e., new digi's) that have happened in the Johnson City area.

Moe;

What you are seeing is the contents of Ui-View32 Unproto address;

In Ui-View32 the Unproto address it would look like this for WX4MRX.

APRS,WA4KJH-7,WIDE2-2

There is no * behind WA4KJH-7 and that indicates that KJH-7 did not digi it.

I am still supporting Relay and Wide1-1 in my digi.
My Ui-View32 digi Alias is set up like this :

WA4BDS,RELAY,WIDE1-1

It is working very well at present and it supports our local mobiles as
well as visitors
to our area.

I've been thinking about this...my personal preference would be for one less hop than suggested here. I would suggest

Mobiles = WIDE1-1,WIDE2-1
Base stations = WIDE2-1
Base stations in a bad location = WIDE1-1,WIDE2-1

As you add hops to a path, the number of packets grows almost exponentially.

Again, just my 2 cents.

So, I am going to make the change here as well. I wanted to mention where I am and what changes to make to assure I do not cause any problems.

Currently my station is setup as follows:
RELAY,WIDE

with an IGATE allowing traffic NET -> RF only to WX4MRX and all traffic RF -> NET (IGATE'ng WX4MRX is temporary or for as long as needed).

Reading these posts and information on the TAPRs site, I assume the best route would be changing RELAY,WIDE to WIDE2-1. Would this be correct. I am in a fairly decent location. Any additional advice would be appreciated.

Thank,
Doug

In the Knoxville area, you are probebly right William. But as one moves out to fringes, or travels across other areas, they might need to increase the path back to the WIDE2-2.

Where I am, I have to run WIDE1-1,WIDE2-2 to get anywhere at all.
Stations in closer to KG4FZR-7 run WIDE2-2.

Agreed on the digi alias Roy. That alias string doesn't cause problems
at all.

Doug,

Your station beacon UNPROTO would be correct at WIDE2-1. If you find you need one more hop, go WIDE2-2 instead.

If I read correct, any RF traffic you get goes to the APRS Server. The only station you Igate Internet to RF is WX4MRX. If this is correct, and the type of station it is, I would go RFONLY for the UNPROTO path in the Igate setup, because if I remember right, you are right at WX4MRX. If MRX needs it, you might go WIDE2-1.

Hi Scott,

Thanks for the information. Here is my current setup:

Xastir allows me to have multiple UNPROTOS and alternate between them on seperate transmissions. So my first now is: WIDE2-2 My second is: RELAY,WIDE. If you feel that I don't need to keep the second then I will remove it.

My IGATE is set to the following: All RF traffic goes to the APRS server. I only IGATE Internet to RF traffic destined for WX4MRX and have set the path to RFONLY. I am only about 1 mile from the weather station and can hear it directly.

Thanks again,
Doug

Sounds good. Don't know that you need to RELAY,WIDE, but I don't see
it doing any harm. Just make sure any messages you send go WIDEn-n.
They probably won't make it with the RELAY,WIDE.

2276. Weather station board update

Yahoo group: EastTNAPRS
Date: 2006-08-25 02:11:00 UTC
From: tennesseestargazer
Topic: 2276 Message: 2276

Thanks to william and moe for their help. The board is now connecting via RF to the network. I now need to save up funds for the wind sensors, rain guage and humidity sensor. I still need to get more details about configuration from the designer of the board. You may see the station up as kg4ujc-13 from time to time during my testing.

Topic: 2246 Message: 2278

Thanks for asking William..

I am using Xastir (version 1.8.2) as my entire APRS solution. It is running on Fedora Core 4 (Linux). It has the feature set built in to Igate, Digipeat, and much more.

Xastir runs on (from the DOCS) Windows/MacOSX/Linux/FreeBSD/Solaris/Lindows, with many more possible. It supports 125 map formats, several types of TNC's and weather stations, Festival speech synthesizer, AX.25 networking (Soundmodem/Baycom/SCC!) and seven languages!. On Unix-like operating systems, you can run your weather station or GPS on a separate computer as well, which is good for those hams who are already short on serial ports.

More information on this can be found at http://www.xastir.org.

Some features are not real easy to setup and configure but they are very feature packed. The authors seem to have done a good job on this product and are very active maintaining it. Xastir is FREE! under the GPL license and comes with all source code. It took me a little work to get it the way I wanted it but I am very happy with it.

The map possibilities are incredible. My setup currently uses the topo terraserver maps or the tigerserver maps (both online and each depending on the zoom level which one I show) overlayed with some street maps then overlayed with the National Weather Service Doppler Radar all which have transparent backgrounds except the base layer. So it looks as if you are looking from a satellite (zoomed in with street markers) with weather overlay. REALLY COOL!

(Kinda sounds like a commercial - no, I have no development code in the release version)

2279. IGATE and Xastir (from previous WIDEn-n discussion)

Yahoo group: EastTNAPRS
Date: 2006-08-25 18:30:34 UTC
From: Doug Johnson
Topic: 2279 Message: 2279

Before anyone decides on Xastir just for IGATE purposes I need to clarify my setup. After some experimentation, re-reading the docs, looking at the source code, and speaking with William my IGATE setup allows for more than just WX4MRX to RF. I was only seeing traffic destined for WX4MRX in my logs because that was the only packets going through at the time. Since then I have noticed a few others relayed through.

My incorrect assumption was that Xastir (and others) allows the use of controlling NET -> RF traffic by specific calls. I assumed (no comments please) that meant traffic with ONLY THOSE calls was allowed to pass. This is not the case. These calls allow for additional traffic that may be of importance to your area but not desitined for your area. Such as traffic for REDCROSS, YOUTH, etc. You can add weather station traffic or particular callsign traffic to be added as well (where my mistake was made).

I am going to keep the IGATE up at this time to allow access to WX4MRX and other fill-in data that obviously has been needed. My RF wattage is currently set for very low power due to some interference problem I am working through and this should keep duplicate packets and interference to a minimum.

Just to pass my humble errors along..

Doug

Doug,

Here is a FAQ I found about Xastir Igate:

"Does Xastir I-Gate?

Yes. It can igate in both directions. It only igates messages to RF, and doesn't igate the remote stations posit to RF along with the message like some programs do. You can select per interface which direction to igate, or whether to igate at all on that interface."

With that said, it seems Xastir gates all traffic from RF to Internet, but only messages for your "local" area from internet to RF (local being stations you hear).

Your station is probably helping get messages to and from WX4MRX.

It would be nice if Xastir had the functions for Igating that UI-View32 had. It is fully customizeable, and you can limit or allow what traffic is needed.

2283. Something has to give...and like NOW!

Yahoo group: EastTNAPRS
Date: 2006-08-28 02:57:47 UTC
From: Scott
Topic: 2283 Message: 2283

OK guys,

I have offered suggestions nicely. I know your "big" digi is down. But here is the scoop...

Right now, KG4FZR-7 has 3 "fill-in" digis in Knoxville coming through KG4FZR-7 as TCPIP,KG4FZR-7. Two of these "fill-in" digis are within 3.6 miles of each other! Guys, that's simplex range on a rubber duck on low power!

There is one "fill-in digi / Igate" that is gating every station near it on internet out to RF with an UNPROTO path of WIDE1-1,WIDE2-2.

There is at least one station with RELAY,WIDE1-1,WIDE2-2 in it's UNPROTO that is setting off fill ins all over TN,GA,SC, and NC.

And that's just the problems I have seen tonight.

Here is what is fixing to happen, and I hate to do this, but either fix it, and like soon, or these stations WILL BE EXCLUDED for KG4FZR-7, beacons, messages, objects, everything.

The APRS system has parameter that have to be used or you screw up the system for stations many many miles away.

We keep our end right down here. If the signal don't get there with normal standard paramneter, then so be it. Put up a better antenna, get a better radio, but we don't make the path so huge or weird it causes grief for everyone.

Set down, and get some coordination going on.

You guys are smarter than this.

I've said it before, and going to repeat it here:
(1) Not everyone needs to be a fill in digi.
(2) Not everyone needs to be an Internet to RF Igate.
(3) Igates are LOCAL, less than 30 miles, in nature, they don't need BIG UNPROTO paths.
(4) NEVER use WIDE1-1 at the end of a path, and don't use RELAY,WIDE1-1,xxxxxxx as a path.

Now if that makes you mad, I'm sorry, but enough is enough.

If any of us down here are causing you grief, let me know and we'll try to fix it.

Scott Duckworth, NA4IT
Sysop of KG4FZR-7

I'm confused.

What exactly is the problem that you are seeing?

I don't understand what you mean by "3 fill-in digis in Knoxville coming thru KG4FZR-7 as TCPIP,KG4FZR-7".

Can you elaborate and give some examples?

2287. Re: [EastTNAPRS] Something has to give...and like NOW!

Yahoo group: EastTNAPRS
Date: 2006-08-28 20:09:40 UTC
From: David Hoffman
Topic: 2283 Message: 2287

Is it me?? I drove to Chattanooga and back on Sunday.? I?m sure that KG4FZR-7 heard me in both directions on I-75.? That would explain the 21 entries of KE4FGW-9 in your station list in the last 24 hours.? I drove down with a path of WIDE1-1,WIDE2-1 and my father reported that he lost me around the Athens exit on the way down.? This should have been a fully trackable route all the way to Chattanooga except for the Dayton TN area.? On the return trip I decided to make my path WIDE1-1,WIDE2-2 to see if this helped.? I also wanted to get my beacons and messages up to the Knoxville area since the APRS net was taking place that night.? So I ran with this path all the way to Maryville.? I should back that path back down to WIDE1-1,WIDE2-1 and will do so the next time I power up the radio.? I hope I haven?t caused too much traffic for your area.? I was trying to learn from the experience since the big digi went down.
?
Incidentally, WIDE1-1,WIDE2-1 didn?t work so well in the Chattanooga area.? I got RELAY,WIDE to work a lot better while I was down there.? I thought the Chattanooga area was ready for the new WIDEn-N paradigm?

Topic: 2283 Message: 2288

Amazingly enough, within minutes of me doing that post, the three stations doing that disappeared. William, I don't know how they were being gated Internet to RF, because they are not in the "allowed" list in KG4FZR-7.

Here are some examples I emailed to Moe about some of the stuff going on. Most of these just need path fixes, if someone will just do them. Right under each example, in the <<< >>> you will see my explantion for what is wrong. I know these may be hard to read, because of the goofiness of Yahoo's formatting...

AE4VP>W4LAW-5*>WIDE1-1>WIDE2-2>APW285
<<<Evidence of either a RELAY,WIDE1-1,WIDE2-2 or WIDE1-1,WIDE1-1,WIDE2-2 path>>>

<<<Hit W4LAW-5 83.7 miles away, then went through 2 more WIDE1-1 digi's...the RELAY,WIDE1-1,WIDE2-2 and maybe even too much power>>>

AE4VP>W4LAW-5*>WIDE1-1>WIDE2-2>APW285 (UI):
_08272306c135s000g000t077r000p000P000h75b10162wDAV
AE4VP>W4LAW-5>KG4FZR-7>WIDE1*>WIDE2-2>APW285 (UI):
_08272306c135s000g000t077r000p000P000h75b10162wDAV
AE4VP>W4LAW-5>WA4YYM*>WIDE2-2>APW285 (UI):
_08272306c135s000g000t077r000p000P000h75b10162wDAV
<<<Same as above>>>

I'm not trying to be a horse's rear, just trying to point out that there are somethings wrong that need to be fixed so the system works better.

Moe,
Did you check the "Path(s)" in the "Setup" pane in "Edit Igate INI" under the "File" menu in UI-VIEW32? The screen shot I sent you suggested that the IGATE path be either RFONLY or WIDE2-1. Also the "Use Default" has to be unchecked. That is all it takes to fix yours.

You Igate sends out traffic as WIDE1-1,WIDE2-2. That's why everyone, not just me, not just KG4FZR-7, sees any Internet to RF traffic you gate out as "TCPIP,N4CQW,WIDE1-1,KG4FZR-7,WIDE2-1". That path has an effectiveness of about 100 miles! That path also happens to be the same path your station becon uses.

If you want to, open up the "Edit Igate INI" make a screenshot of it and I will look at it. You have my email address.

From: Scott
Topic: 2292 Message: 2292

I would like for an RF only station in the Knoxville proper area to take a screen shot of the entire McMinn County area you see and email it to me. If you can, include a list of the paths each station in McMinn Co you see is using. Please, try to keep the files under 2-3 MB, I am on dialup.

Time to educate me on UI-View a little.

Is there a way you can set it to ONLY gate packets from specific stations? I thought by default it would gate messages (and a position packet) from any station that is sending a message to a station that you have heard on RF. I thought the only other thing you could do was to tell it to gate more stuff.

You have it right William. But, why would it gate a station in
Knoxville, out of it's "local" range, when that station had not sent
or received any messages from or thru it?

Weird to me too. And it is still doing it right now...

KE4KKE>APU25N,TCPIP,KG4FZR-7*

And I'm not hooked to the internet, I'm RF only.

That's exactly what you should see, with no hi-level digi's in your area.

None of our base stations, other than me, run anything "wider" than
WIDE2-2. Same with KG4FZR-7, and it's Igate is RFONLY, no digi's.

I run WIDE1-1,WIDE2-2 usually, because I am in a hole, and usually
cannot hit KG4FZR-7.

Without KA4TAR-7, I would hear absolutely nothing. KA4TAR-7 is setup as a WIDE area digi (he's got a very high location and hears well to the North, not to well to the South - he's right up at the mountains).

I wondered if he would hear KG4FZR...looks like he does not.

I don't see enough of this packet to know where it came from or what's going on.

Did KG4FZR-7 transmit this packet (that's what it looks like to me)? If so, then I would guess that KE4KKE has sent a message to someone that KG4FZR-7 has heard on RF (maybe someone as far away as N4CQW ?) and KG4FZR-7 is doing the proper thing and gating the message/position to RF.

I'd look at the logs, surely there's a reason that UI-View would have sent the packets.

Did I say that Moe?

I'm glad to see you back on the air. No need to get mad and shut down. Just humor us and try some things to hopefully make it better.

As far as KE4KKE, he and I have communicated and it seems his setup is right. So I am going to KG4FZR-7 tomorrow and see what is going on.

Here's the thing in UI-View32's Igate...

If a station IS added in the Internet to RF list, and selected to gate ALL it's traffic, then you will "see" that station every time it beacons, sends an object, or sends a message. It will also show up when someone messages it. I.E. it will be on screen all the time.

If a station IS NOT in the list, then the only time it will be seen is when someone messages it, or it messages someone in the "local" range of that Igate. Then it will expire according to other stations expire time.

It's an anomoly. I don't know if someone is messaging his station (could even be an ?APRSP) or if KG4FZR-7 considers him to be a "local" station. When I see stuff like that going on, I know there is a problem, and it needs to be looked at. And I will on our end.

My goal is to help stations with KG4FZR-7 enjoy APRS and make APRS system as useful as it can possibly be, without causing problems for other stations, no matter how close or how far away. There have been folks around for years who have used APRS and developed it into what it is today. They have set standard that in MOST CASES work. Yet, sometimes, tweaks need to be done to enhance what it does, but those "enhancements" must be done carefully, listening to feedback from others on the system, checking logs, looking at FindU and other resouces, and making sure that "enhancement" is having the proper effect.

That is one of the purposes of this Yahoo Group, to share ideas. And sometimes, we may have to YELL at each other to get through our thick skulls that there is a problem. (My problem is a stiff neck, almost broke it when I was a kid, so sometimes I don't look the other way too well!)

Let's work together and get APRS working right! You all are without a wide digi right now. There are others planned. But, if we do things that cause massive ammount of unnecessary traffic, we will be causing transmitters to fail from that traffic, and we will be back to square one. And I for one won't keep replacing transmitters. That's why there is one station excluded full time from KG4FZR-7, because when it is

running a lot, it keeps KG4FZR-7 keyed for up to 1 1/2 minutes at a time.

Hi Moe, WIlliam, all the rest,

TCPIP is the whole problem to begin with. I've been doing APRS for over 10 years, and what we need 1st and foremost is a strong "RF Backbone", PERIOD!!. As the ARES Dist 8 Asst District Coordinator (ADEC), APRS makes an excellent tool to use during Emergencies ei: weather related, search and rescue, etc... I'm going to the LARC club meeting on Thursday and talk it over with AG4OA, Mark Wills (The Eastern Asst Section Emergency Coordinator). Mark is in charge of Districts 7,8, and 9, that amounts to everything east of Crossville, and we are going to get this thing straightened out once and for all.

I understand that some operators do not have a good RF path, and need to use the internet to connect on APRS, that is fine and well, but not every station needs to do it, in that is where the problem lies. If I step on a few toes here, then so be it, but we all need to be on the same page or forget it and start over

The best source of APRS info we ever had was Paul WO4U, and he would set you wanna be's straight in a hurry

My plans are for a District 8, district wide SET (Simulated Emergency Test) using APRS as our main means of communications, RF ONLY, this will be a test to see if the back bone will work with no internet APRS available or very limited use. This is a possibility, it could happen, and we need to be prepared in case it does. We Hams of today rely too much on the internet.

Like I said if I step on toes so be it. Further Information will be forthcoming.

Hi gang!

The posts are really ramping up over the past week which I believe to be a really positive thing. We have seen numerous changes as part of a reaction to a problem and that is also a really good thing. We are moving to a design that will improve our coverage and reliability and place us in a standard that will hopefully match where APRS is going.

In this process though there are growing pains and I want to caution us to think before responding to situations. Think about who is listening or reading the posts. Think about the image of ham radio and our desire to see more and more people join into this wonderful hobby. If we portray that "I am right and everyone else is wrong" then we will never get anything solved and we will damage the partnerships and friendships we have created over the years. I believe that damage is far greater than the damage an extra packet or two would have on our net.

Understandably there are those areas that have worked out all of the bugs in their setups and I greatly applaud them. But rest assured that it did not happen overnight. We must also work through some of these issues. It will take some time.

In the issue of the following quote:

> TCPIP is the whole problem to begin with.
> I've been doing APRS for over 10 years,
> and what we need 1st and foremost is a
> strong "RF Backbone", PERIOD!!. As the ARES
> Dist 8 Asst District Coordinator (ADEC), APRS
> makes an excellent tool to use during Emergencies
> ei: weather related, search and rescue, etc...
> I'm going to the LARC club meeting on Thursday
> and talk it over with AG4OA, Mark Wills
> (The Eastern Asst Section Emergency Coordinator).
> Mark is in charge of Districts 7,8, and 9, that
> amounts to everything east of Crossville, and
> we are going to get this thing straightened out
> once and for all.

TCPIP is not the whole problem to begin with. The problem is learning and helping. I use TCP/IP in my shack to share data between my APRS box and another PC and it is an awesome tool. Ther are stations using TCP/IP over the Internet to reach areas they cannot reach otherwise. If people said that the microphone would have been a "bad" introduction to Ham Radio then we may all have a straight key next to

our rigs and we we probably would have never been playing with APRS today. TCP/IP is a valuable tool as part of the APRS package, lets not remove it.

As for ARES, APRS as a whole is a VALUABLE tool. Let's work together to understand its abilities AND limitations. ARES itself will not solve the problem at hand. Only those people who are willing to work together for a common goal can make the change.

As for "wanna be's" Chris, you and I both were "wanna be's" at one time. If not, we would not be in Ham Radio today. Remember your roots.

Let's define what needs to be changed and work together to make those changes. Let's welcome the new ones and let's learn what elmer'ing is again.

So, exactly what are you trying to say?

If the stations that rely on the internet loose internet connectivity, then they can no longer communicate? True.

On the other hand an RF backbone is just as likly to not be available during an emergency as the internet, so relying on either is foolish.

I like to operate APRS via RF and generally do so (see KI4HUD-2, -7, and -9 and when I'm home, KI4HDU). I also (like now, when I'm not in a position to be active on RF) like to use the APRS-IS (KI4HDU-2, -3, -X, -HG and -JS which you may not see because some of these don't transmit even to the internet).

Having said all of that, I don't see the point of your message.

From: Scott
Topic: 2310 Message: 2310

Boy, someone hit the nail square on the head when they pointed out the problem is TCPIP. But, let's add Igates and Digi's!

APRS stations (the RF type) seem to be easy to setup, with most of the "wizards" in the software available today. But easy is far from it. One must understand things like UNPROTO path, and how it pertains to beacons, objects, and messages. Transmit timing is something else many don't understand.

When it comes to Digi's, WIDE, Fill-in, etc. these can cause more headaches than you could ever imagine. Our voice repeaters require very careful coordination, which sometimes takes months to get an approval. But APRS...where the is no coordination, there is confusion, and problems abound.

It has been said many, many times on the internet "Not everyone needs to be a digi." How true that is. Not everyone needs to be an Igate either. Look around you and see who is doing what. I know you want to help. Sometimes the best help is none at all.

Igates..let me define them:

RF to Internet Igate...receives APRS data FROM the RF and TRANSMITS to the APRS servers via the INTERNET. These don't cause a problem to the RF side of APRS, because they don't TRANSMIT to RF.

Internet to RF Igate...receives APRS data from APRS servers via the INTERNET and TRANSMITS it to the RF side of APRS. And here is the problem child!

Let's look at a "simple" Internet to RF Igate. This is an Igate that stands ready to accept a message from an APRS serves and broadcast it to the RF to a station it considers a "local" station, usually less than 30 miles away. The problem...if the IGATE station does not setup a separate UNPROTO PATH for the IGATE, such as RFONLY, or at the most WIDE2-1, then the traffic it gates gets sent out via it's station beacon UNPROTO, which is probably going to cover way too far of an area (remember CB'ers used to call it "alligator station, all mouth and no ears?).

And then there is the "advanced" Internet to RF Igate, that allows nearby Internet connected APRS stations to have all their data (beacons, objects, messages) gates all the time. These require very advance knowledge and careful planning.

We need to all coordinate together. When a new station appears as an Igate or digi, take a look around them. Be nice, but you may need to

point out potential or real problems. Do research. Read read read before you act.

Just my take.

Scott NA4IT

2311. Re: [EastTNAPRS] APRS and SET

Is APRS a good choice as the main means of communications for a SET?

I've recently read the ARRL EmComm Level 1 handbook. In it, they emphasize using the communications mode appropriate to the kind of message that is being sent. They emphasize that putting a 3 page document on a fax machine is a lot faster than reading it via voice over the radio (if the fax machine is in service).

I see where APRS could be a part of the communications plan, and ideal for getting position reports. I don't see APRS nearly as efficient (or reliable) as voice for much of the communications that would take place during an event.

What does everyone else think? Further, what things do you see that APRS would be good for and what things do you see APRS is not appropriate for?

I guess I disagree with you guys.

I don't see the APRS-IS as a problem. You can easily generate problems on RF without a connection to the internet.

Think of a station that runs a path RELAY,RELAY,RELAY or WIDE1-1,WIDE3-3,WIDE1-1, etc. The amount of RF noise that can be generated from a single packet can be HUGE - and has nothing to do with the internet. Or what about a home station that beacons on RF every 30 seconds. As you all know, this list goes on and on.

The emergence of the new WIDEn-N paradigm was because of RF problems, not because of internet problems.

Can we have too many IGates, sure, but we can also have too many RF digipeaters. In fact, on this list, I have suggested that some people turn their digi off (and you will find I do not run a digi and my IGate is configured as a backup to WA4RYW-1).

Any misconfigured station can cause problems.

So why do you guys see the internet as THE problem?

I'll agree gating to RF with a long path (anything more then one hop in this area) is a bad idea.

On the McMinn County ARC web site, you have some information about APRS. I know you have pages that tell what not to do, do you have pages that list these common mistakes that cause problems?

From: David Hoffman
Topic: 2310 Message: 2317

I disagree about the Igate Unproto path being different then the regular Beacon?s Unproto, and let me explain why. If an new RF station gets on the air and starts to learn what his APRS environment, or network is, who he can hear and who he can carry on messaging with, and then decides to use the Igate that he has discovered in his local RF network, the Igate then will not work as planned or as designed. The Igate uses a certain Unproto that gets it?s station icon out on the RF map. This new RF station discovers that his own station beacons are being Igated to the internet so he decides to use the internet to RF side of this Igate, with permission say. He will get different results with a different Unrproto path from that Igate then he expected. I agree that the Igate should decide who he will allow to get retransmitted via RF. The 30 miles theory sounds good, because the Igate has to have something to filter on. Even if an ?ALLOW? list exists and this new RF station gets on that list because he meets the criteria. The Igate will still not work as he or the RF network designed it to work. The gated messages from the internet may never reach this new RF station because the Igate is using a different Unproto path then say the regular beacon path. Therefore, the Igate fails in my mind as an Igate. It did not do what it was intended to do by the owner as well as the network

Does this make sense, the point I?m trying to clarify on is about using different Unproto paths for a particular station then the regular beacon unproto paths?

I did do some rewrites to the guides on mcminnarc.com, but tried to
steer away from the technical stuff, as it is geared towards new users.

(1) Someone has already refered to me being a "cry baby" in an APRS message this morning. Wah.

(2) Read up on Igates. These ideas are not mine, they are the ideas of the folks who wrote the server and Igate software packages, and they are way smarter than me. A good place to start is http://www.aprs-is.net/igatecfg.htm .

(3) You all do what you want. I'll do what I have to.

Well that is true, I have not read up on Igates. I just had a thought when I read your email and wanted to discuss it while we were on the subject. Timing may not have been good, but I thought I'd try. Thanks Scott. I am still learning from all of you.

From: Bob Thomas
Topic: 2310 Message: 2323

Well,
I'm no packet policeman or guru, but here's my 2 cents worth. Not all of us on this list live in a thirty mile circle. Also, new hams to this mode need to learn, just as I do... In the beginning of APRS, protocall changed weekly and that part of it hasn't changed that much. This is a hobby to learn and it's OK to make mistakes learning. A problem that I have is that some of us old timers to APRS are slow to change our setups too quickly. Yes, I'm guilty of that big time. I've used APRS since 1994 and have been on every dos version since and still don't understand it all. I use the Igates when using space mode to see if I got digied via one of the satellites or space stations. What does seem to be a problem is big city congestion of packets. Perhaps it would be a good idea for some of the larger metro areas to have a satellite frequency(local APRS network) for APRS on a separate frequency? Just a thought for all those events and bike races, etc. Also, in the early 90's when I first igated a message packet><internet and back internet><packet the messages had to be "hand filtered" by a ham. At least that's what was told me by my elmer back when it was common to see international traffic on here. That was the way fcc wanted it, I was told. I don't know what they want now, but that made sense to me back then and still does. We don't want non amateur broadcasts of any nature on amateur radio that doesn't initiate from a licensed amateur radio operator's station. We don't want to automatically gateway messages of all types, such as WX info from non ham WX stations that also show up on APRS internet websites. I am so thankful that you folks are getting the digi bottleneck fixed in the knoxville area. As far as unproto paths are concerned, it's also OK to use up to seven hops on packet via digis, but that should never be done unless you are experimenting and testing for paths. On a nornal setup, such could cause interference...lots of interference, times lots more interference. I'm not saying anything to another operator that is learning and playing with APRS to discourage them, but something like "Hey, have you read the latest APRS setup protocall yet?" might work OK . I might not like it when i get my hands slapped, but that's how I learned the limits of my network up here in the wilderness outside the IGATE's 30 mile circle in the "Outer Limits", lower East side of Flag Pond, TN. I guess some of us think outside the box while others live in the circle.. hee hee. The main thing I'm trying to say is APRS needs to benefit us all... digi ops, mobiles, IGATEs, experimenters, vacationers tracking themselves to the beach, balloonists, daily commuters, and when it comes down to it, emergency traffic from any of us anywhere in the network. I think it's fun, but sometimes frustrating. APRS is always changing. Some of us "Seldom Seen" APRS'rs like to set and forget, which I'm guilty of, too! Now , where's my tnc manual... thanks for the update posts!

Bob,
ks4ng

Subject: Re: [EastTNAPRS] The problems, the fix

I disagree about the Igate Unproto path being different then the regular Beacon's Unproto, and let me explain why. If an new RF station gets on the air and starts to learn what his APRS environment, or network is, who he can hear and who he can carry on messaging with, and then decides to use the Igate that he has discovered in his local RF network, the Igate then will not work as planned or as designed. The Igate uses a certain Unproto that gets it's station icon out on the RF map. This new RF station discovers that his own station beacons are being Igated to the internet so he decides to use the internet to RF side of this Igate, with permission say. He will get different results with a different Unrproto path from that Igate then he expected. I agree that the Igate should decide who he will allow to get retransmitted via RF. The 30 miles theory sounds good, because the Igate has to have something to filter on. Even if an "ALLOW" list exists and this new RF station gets on that list because he meets the criteria. The Igate will still not work as he or the RF network designed it to work. The gated messages from the internet may never reach this new RF station because the Igate is using a different Unproto path then say the regular beacon path. Therefore, the Igate fails in my mind as an Igate. It did not do what it was intended to do by the owner as well as the network

Does this make sense, the point I'm trying to clarify on is about using different Unproto paths for a particular station then the regular beacon unproto paths?

Boy did I stir the pot or what? At least we as a collective group are thinking about solutions, I just think we had a lot less problems before the IGates and TCPIP were being used. It would be nice to see ALL the stations available on the map. I or somebody else for that matter may have traffic for a station, and not know it is on because they are TCPIP or whatever. At least there must be a way for all stations appear on the map. What does the group think?

Yeah, it's good to see the pot stirred up on here every once in while, hee hee! If you run the DOS version of APRS, check your "digi" list and you can see how it got to you. I don't know about other versions, but I guess they'll have similar setup. also, if you can put your tnc in standard packet mode with terminal program, you can check your "heard" list. My ISS packets from the space station sometimes have a couple hops after SPACEGATE so i can see them return up here. That's also where some of the IGATE stuff comes from. Some of the sats downlink on 144.390, too. So, it's not all local traffic you see on there. once in a meteor shower, I had stations show up all over the eastern u.s. locally via meteor scatter. I used an 8 element quad and the nearest WIDE digi that picked them up was wb0noo-? digi in nashville. That was interesting... look for a * after the callsign.

Boy did I stir the pot or what? At least we as a collective group are thinking about solutions, I just think we had a lot less problems before the IGates and TCPIP were being used. It would be nice to see ALL the stations available on the map. I or somebody else for that matter may have traffic for a station, and not know it is on because they are TCPIP or whatever. At least there must be a way for all stations appear on the map. What does the group think?

Also if u read the article on the annual test is can be contucted
anywhere from Sept. 1 thru Nov. 30 with Oct.7-8 as the main weekend.
Since I am a METERS member I can attest as to it being Oct. 13 and 14
since we are to be the key communications team for the activity and are
to be monitored by a homeland security advisor.

This always seem to be the problem, each individual ARES group does their own thing and doesn't follow the national organizations lead. We all need to get on the same page here, I was asked to help out AGAIN, because it seems the system in NOt Broken but severely bent to one side

I expected to receive some bad press on the APRS issue, but at least its got the ball rolling in a direction and actions being taken to fix whatever problem we are having or not having with APRS in E. TN.

I apologize for making a few people mad, but sometimes thats what you have to do to get people up off their keesters and get some action. Ruffle a few feathers, then stand back and see what the out come is. It will only make us stronger

And of cource certain groups have always marched to the beat of a different drummer.

Scott;

Thanks for pointing out that this is a A P R S group.

This is not the place for ARES politics.

Nothing, This started when someone was discussing that the SET was on
October 7 & 8 when in fact it was for 13 & 14 that is all. Nothing more
so just drop it.

To my knowlegde, there is none. The latest listing I have found is this one:

(This list effective as of June 2004.)

-1, 2, 3, 4 are for digipeaters and other home stations

-6 is for Operations via Satellite
-7 is for TH-D7 walkie talkies
-8 is for boats, sailboats and ships (maybe 802.11 in the future)
-9 is for Mobiles
-10 is for operation via The internet only
-11 is for APRS touch-tone users (and the occasional Balloons)
-14 is for Truckers
-15 is for HF

If someone finds a list dated later than 06/2004, let us know! We need to keep current.

I know for me, stations who use the SSID defacto standard helps. Say I see a -10, I know it is an internet station.

Note on the -7, it can also be used for the D700, and used by stations that are TX only, or most times unattended, with no operator there to answer messages.

I know we have seen in our area the -11 used for ballons.

The Austrailian APRS folks list the following:

(The webpage this came from is http://www.aprs.net.au/aprs_ssid_guide.htm and showed to have been modified on August 19, 2005.)

-0 Home Station, Home Station running IGate.
-1 Digipeater, Home Station running a Relay Digi, Wx Digipeater
-2 Digipeater [#2 or] on 70CM
-3 Digipeater [#3]
-4 HF to VHF Gateway
-5 IGate (Not home station) -6 is for Operations via Satellite
-7 Kenwood D7 HH
-8 is for boats, sailboats and ships (maybe 802.11 in the future)
-9 is for Mobiles
-10 is for operation via The internet only
-11 is for APRStouch-tone users (and the occasional Balloons)
-12 Portable Units such as Laptops, Camp Sites etc.
-14 is for Truckers
-15 is for HF

I was use to seeing:

the -1 for weather
the -2 & -3 for digis
the -5 for watercraft
the -6 for aircraft
the -7 portables
the -9 for cars
the -12 for jeeps
the -14 for pickup trucks and
the -15 for vans.

Those are some of the ones I remember from back a few years ago.

Thanks William for posting the question about ssid for weather stations. The one I'm building I have the ID set to -13. I may be at the site tomorrow that I hope to be able to setup my station and hopefully a digi. I'm taking my GPS so I can get the exact location.

APRS has icons for ARES stations... APRS supports just about every type of amateur station you can think of, including ARES stations. Many of us are involved in ARES and I personally have been involved in a situation where our local ARES group used my APRS station to give accurate coordinates to a rescue helicopter and save a life. ARES... Amateur Radio Emergency Service has been involved in all sorts of disasters where APRS packet has been instrumental.... we have fun, enjoy the service, and then when called upon, the ARES members use their equipment to help. APRS packet can pass a lot of info quickly. Perhaps you might want to look up ARES on the web and see how your station may be used to help others in times of emergency. Better yet, join a local ham club... chances are they are affiliated with ARES. This is a good topic. As for me and my station, when able, I'll use any mode, any equipment I own, anywhere, and anytime to help someone in an emergency. ARES hams are the guys behind the scenes in a lot of disaster situations that you never read about in the news that make sure communications needs are being met between different agencies and those in need. APRS is a great mode for use in those situations because we have a wide,wide,wide area coverage network of digipeaters.

Topic: 2340 Message: 2340

Nice Profile! It's nice to see we're in the same class and you almost have the same capabilities as me. And how many of your ideas are integrated into APRS by Bob Bruninga like mine have been? We're not sure what your "INFO" has to do with my response to David's APRS/ARES question, though. I don't appreciate your reference: BT NNNN. I got my AE the hard way. I entered the amateur service as a tech plus in 93 and didn't get my extra from a 5 wpm cracker jack box either. My first piece of equipment was a key and it will be my last. My station is and has been 100% full time digital since 1993, and APRS since 94. I joined ARES while waiting for my first ticket. When someone is planning on using APRS in conjunction with a SET and has a valid question about the relationship between APRS and ARES, I'll try to give the best answer I can, whether you or anyone else on here likes it or not. It IS a part of APRS, like that or not. I don't have any "FORMER" status issues with ARES. We're on this site to help people with APRS, and be helped, when needed. You??? i just hope your intentions are positive. Don't think you're the only EXTRA on here, either. Next time you show your... hand... make sure you got the aces. Some of these guys on this site are real hams and they're technicians. I respect their amateur status on here the same as mine, yours too. Take your hat off when you come in here. If we wanted your "INFO" we would have asked for it. Appology accepted in advance... and you have mine as well.

Bob Thomas,

2342. How to unsubscribe

Yahoo group: EastTNAPRS
Date: 2006-08-31 18:47:52 UTC
From: William McKeehan
Topic: 2340 Message: 2342

Some things that have been said on this list were out of line. I, as the moderator of this group, have sent private e-mails to those folks asking them to stop. They have complied with my request. Will these types of e-mails happen in the future - probably, that's the nature of e-mail discussion groups.

We currently have 65 members in this group and have posted 2,341 messages. The vast majority of the people and messages have been about APRS and how to use/improve it in East Tennessee - that's the reason I started this group. Sometimes the discussions get heated - when you have people that are passionate about something, that is what happens. I've been right in the middle of most of these discussions because I care about APRS and want to see it's growth continue.

Some have left this group over the recent discussions. I regret this, but respect their decision to do so.

For anyone else who would like to leave, here's how:

How do I leave unsubscribe from EastTNAPRS?

On the Web:
1. Sign in to Yahoo! Groups and go to the My Groups page.
2. Click on the Edit My Groups link at the top of the page.
3. Look for the group you wish to leave, and check the corresponding box on the right side of the page.
4. Click Save Changes at the bottom or top of the page.
5. The group will no longer be listed on the My Groups page, and you will no longer receive messages.

To leave/unsubscribe via email:

From your email program, send a blank message to:

EastTNAPRS-unsubscribe@yahoogroups.com

Alternatively, you may wish to remain a member but reduce or eliminate group email by changing your message delivery option to No Mail/Web only, Daily Digest, or Special Announcement.

For those of you who stay - thanks.

To All APRS Opertaors,

It was not my intention to start a pissing match on this reflector. The opinions I have stated this week are mine and mine alone. Please do not let my opinions reflect badly upon APRS or ARES. I just feel we all need to step back and take a breather, count to 10, slowly, and start the discussion again. There has been some good come of all of this , believe it or not. As I read the postings, I now understand where people are coming from, and where a little Mentoring might be warranted. APRS has changed in the 10 yrs I've using it, some good, some not so good, but let us all please learn from this. And I shall try to keep my opinions to my self.

To all who care to read,
I have been a member of this group for some months now
and would like to comment on what I've seen the last few days.
although, as has been said, the topics in this group can get quite
heated but only because of the passion most here have for aprs.
I for one have got alot of good help and information from this group
and I want everyone to enjoy it as much as I do. alas I guess that
can't always be. This group and the emails have to be taken as
a "take what you need,ignore the rest" . Doing so makes for alot
more enjoyment and I bet everyone will find much more positive then
negitive. Thanks always to the group 73
ki4mzg Jay

2346. Proposed location for wx station and possible digi

Yahoo group: EastTNAPRS
Date: 2006-09-01 00:19:09 UTC
From: tennesseestargazer
Topic: 2346 Message: 2346

I place an object on the noxville are map for a proposed wx station and possible digi in campbell county. Look for the KG4UJC-13 object on I-75 north of Clinton.

Opinions on the location?

2347. Re: [EastTNAPRS] How to unsubscribe

From: Bob Thomas
Topic: 2340 Message: 2347

To: William, All members of the EastTNAPRS Group,

first, i'm sorry for jumping into and stirring up this mess. second, thanks for all of your positive encouragement messages. i once won that contest from a bridge when i was four years old. that same year, i also found out that a bed sheet parachute didn't work as anticpated from a second story window. lesson learned. i should have kept my reply private and am sorry it was posted to the entire group for all to see. in the future, i will try to:
1. refrain from hitting the "reply" button too quickly, sending replies to the entire group.
2. continue to support and encourage others' use of APRS packet on this group, even those i disagree with.
3. not reply when i've been up too late at night. i knew better.
thanks for those peacemakers who reluctantly responded, but did anyway, and are still here...

bob, ks4ng

2354. New WIDE digi for Tennessee Valley

Yahoo group: EastTNAPRS
Date: 2006-09-02 13:51:21 UTC
From: Ed Dial
Topic: 2354 Message: 2354

Gents,

I just wanted to pass along a bit of news to the camp. As most of you know, Keith Tarwater (WA4KJH) and I have a collaborative association with IRLP on one of the choice mountaintops in the valley. Recently, a new repeater was donated to the cause and new digs with much improved security was made available to us which put us in a position to re-engineer the entire access/control strategy. Up until now, the IRLP computer and associated hardware was located in Lenoir City and linked to the mountaintop repeater via a RF link. This same computer does IRLP IGate and a handful of other jobs. By securing new facilities with a controlled environment and broadband access, this allows me to move my computer and associated hardware to the mountaintop for a direct link to the repeater.

OK, here's where it's good for APRS. My IGate runs on this same computer, so it will be going up to the 3800 foot level as well, along with the Kantronics KPC-3+ which I will set up as a WIDE Digi. All this is to take place on the week of October 9th. The digi has already been configured to comply with the new paradigm and is equipped with ROM version 9.1, so it executes full featured dupe checking. The site should give slightly more Eastward coverage than the old WA4KJH digi afforded.

By all means, I would NOT stop plans for another digi. East Tennessee is DESPERATE for good WIDEs. It's just a turn of events and fate allows me to set this one up which is a freebie. I would hope that all this means is now we get two!

I could not encourage more the addition of another WIDE, and North Anderson, Campbell, or somewhere on the North end of the valley would be excellent. I have always wanted to set up on Windrock, but don't have the connections.

Subject: Re: [EastTNAPRS] New WIDE digi for Tennessee Valley

Just my 2 cents... lol.

I think we should go ahead and STOP the new digi from going up at this point before anything else is invested towards the a duplicate digi effort.

Maybe using it in conjunction with Joe Campbell's dig/weather station he was talking about putting up in Campbell County? If he is able to access the site we could maybe use it for that. Also to this I have been able to get us a Motorola radio already set for packet / aprs, it is wired and ready to go. This radio will be courtesy of Frank W4NCS. If Travis is agreeable to still letting us use his TNC this would greatly increase the accessibility to the northern counties. Having talked to some people in Campbell County who have interest in APRS but the poor coverage by the big digi makes it hard for them to get into the this portion of the hobby. The coverage of the digi should be similar the 147.360 repeater and should cover all of Campbell, Anderson, Union and most if not all of Scott county. This would also greatly help the northern and western area's of Knox county.

Any thoughts good or bad on this idea?

Thanks and 73 all!

I DO need one thing desperately. Do you have, or have access to a cabinet? A new one is around $500. Keith donated a radio, heliax, and an antenna (as well as the site), and I seem to have the rest with exception of something to put it in that would keep things organized and blend in with the surroundings.

If you guys want to slate some vacation off the week of October 8th (11th through 13th specifically), that's when the intense migration will occur. Love to have you guys involved!

Do you need any equipment donations? I have a few items around the shack, switches, access points, hubs, cat 5 cables and the like. I have some pc hardware as well and I might be able to come up with a complete PC if you need one. I also have some test equipment (100 MHz scope, arbitrary waveform generator to 50 MHz, AC milli-volt meter and etc.) if you want to set levels and the like.

This is exciting news indeed! Let me know if you need a pair of hands to help with the install.

OK, here's where it's good for APRS. My IGate runs on this same computer, so it will be going up to the 3800 foot level as well, along with the Kantronics KPC-3+ which I will set up as a WIDE Digi. All this is to take place on the week of October 9th. The digi has already been configured to comply with the new paradigm and is equipped with ROM version 9.1, so it executes full featured dupe checking. The site should give slightly more Eastward coverage than the old WA4KJH digi afforded.

Subject: [EastTNAPRS] RE: New WIDE digi for Tennessee Valley

I DO need one thing desperately. Do you have, or have access to a cabinet? A new one is around $500. Keith donated a radio, heliax, and an antenna (as well as the site), and I seem to have the rest with exception of something to put it in that would keep things organized and blend in with the surroundings.

If you guys want to slate some vacation off the week of October 8th (11th through 13th specifically), that's when the intense migration will occur. Love to have you guys involved!

Subject: RE: New WIDE digi for Tennessee Valley

Do you need any equipment donations? I have a few items around the shack, switches, access points, hubs, cat 5 cables and the like. I have some pc hardware as well and I might be able to come up with a complete PC if you need one. I also have some test equipment (100 MHz scope, arbitrary waveform generator to 50 MHz, AC milli-volt meter and etc.) if you want to set levels and the like.

This is exciting news indeed! Let me know if you need a pair of hands to help with the install.

Gents,

I just wanted to pass along a bit of news to the camp. As most of you know, Keith Tarwater (WA4KJH) and I have a collaborative association with IRLP on one of the choice mountaintops in the valley. Recently, a new repeater was donated to the cause and new digs with much improved security was made available to us which put us in a position to re-engineer the entire access/control strategy. Up until now, the IRLP computer and associated hardware was located in Lenoir City and linked to the mountaintop repeater via a RF link. This same computer does IRLP IGate and a handful of other jobs. By securing new facilities with a controlled environment and broadband access, this allows me to move my computer and associated hardware to the mountaintop for a direct link to the repeater.

OK, here's where it's good for APRS. My IGate runs on this same computer, so it will be going up to the 3800 foot level as well, along with the Kantronics KPC-3+ which I will set up as a WIDE Digi. All this is to take place on the week of October 9th. The digi has already been configured to comply with the new paradigm and is equipped with ROM version 9.1, so it executes full featured dupe checking. The site should give slightly more Eastward coverage than the old WA4KJH digi afforded.

I saw the first packet from WA4KJH-7 at 4:07 PM Saturday. The digi appears to be up and working just like before.

In something that may or may not be related, we have had reports that some station transmitting has some audio in the background. You have to turn up the volume and listen close to hear it.

If you hear this, try to figure out which station is transmitting at the time that you hear it.

I agree with Moe, I was thinking about NOT putting up a digi on Bluff Mountain if your digi will cover a similar area and be operational soon. The equipment that "we" had planned to go to Bluff Mountain could be used somewhere else, like Campbell County.

I tried to get some input about this situation on the APRS Net tonight, but no one wanted to talk.

A lot of people had an opinion when we talked about the digi on Bluff Mountain, and money was contributed to the cause. If you have input about how things should (if at all) now is the time to speak-up.

ED, When you relocate the digi, will it conflict with WA4KJH-7? Or will it be set up to not respond to things that WA4KJH-7 responds to (i.e., WIDE,TRACE,RELAY, etc.)?

It may be a few more weeks out, but ultimately it will replace the KJH digi, or at least once everyone converts to the new paradigm, it will by default. No one will be transmitting RELAY any longer, which is required to wake up KJH. Keith doesn't directly operate it any longer, so I don't know what plans are in store for KJH, but firmware upgrades don't seem to be in the cards.

My digi WILL NOT respond to TRACE, RELAY, or WIDE without any remaining hops. WIDE3 (the software would see WIDE2-0) would not repeat. It will comply 100% with the 2005 n-N paradigm updates. It will also echo TNn-N paths.

2381. Re: Paccomm firmware for use in a 1270/b/c, tnc 2, etc

Yahoo group: EastTNAPRS
Date: 2006-09-04 22:32:42 UTC
From: Bob Thomas
Topic: 2381 Message: 2381

Moe and the group,
oops, disregard my previous post about paccomm firmware. several years ago the TAPR APRSSIG (Tuscon Amateur Packet Radio APRS Special Interest Group, for those who don't know) had some posts about using one of paccomm's tnc firrmware chips in an mfj 1270 tnc supporting the "trace" call substitution. i think the model is the "Tiny 2 MK 2" .. check out this site: http://www.paccomm.com/tiny2mk2.html it looks like Bob B may have made that choice obsolete, though, back in 2005, though as "trace" is now obsolete.... see the FIX for APRS...
http://eng.usna.navy.mil/~bruninga/aprs/fix14439.html
So, the paccomm firmware is now obsolete, unless they upgraded it again since 1997, but Bob B had a temporary solution: http://eng.usna.navy.mil/~bruninga/aprs/PacComm-settings.txt . It's use as a digi is slightly better than what MFJ had by a hop or two, but it is still a bottleneck. sorry if i got your hopes up for that old reliable mfj tnc.

Subject: [EastTNAPRS] New ETNSKywarn Web site... www.etskywarn.org

Hi all,

As some off you might have just noticed the change in the Skywarn nets towards more of a centralized area of coverage. We have decided to replaced it with a new more interactive website that will change with the needs of the weather and stay devoted to only relative weather and weather needs. This will only cover the District 5 Coverage area, which is made up of Anderson, Blount, Campbell, Knox, Loundon and Union Counties verses the entire East TN area.

The website will be interactive, constantly changing to the needs of the District 5 area, providing up to the moment scrolling weather alerts and activations depending on the current needs of the net. The future will include active weather emails as before, this is in the development process and should be up and going shortly. If you would like to receive FREE weather email alerts send a message to n4cqw@... requesting this feature..

Please feel free to send feed back to ke4kke@... or myself n4cqw@...

The new site is www.etskywarn.ORG (www.etskywarn.org) please update your book marks to reflect the change.

73,

2385. A test

Yahoo group: EastTNAPRS
Date: 2006-09-08 22:43:01 UTC
From: tennesseestargazer
Topic: 2385 Message: 2385

In a few weeks, I am going camping at Big South Fork. I am planning on taking my weather station board and radio. I want to see if from that area it is received by the network. I don't see any digipeaters in the area. I will repost a message before I go. The 147.360 repeater works well from the campground, so hopefully I can talk with someone to see if it shows up on the map.

I also have a lead on a site in campbell county with better elevation for a digi site. I'll let everyone know the status.

Joe

Sounds great Joe, I'm looking forward to hearing how the test goes.

Will you be able to play with the packet path while you're there?

I don't generally monitor 147.36, but if you'll let me know when you're going to be there (and if it happens to be a time when I'll be in town), I'd be happy to monitor the frequency and let you know what I'm seeing.

They did not use APRS last year. We did use a 2 Meter simplex frequency to run the event on. This may require some hiking to get to your assigned station on the trail. It is lots of fun to do this event. There was lunch served after the event was over.

Yes, I'm setting up a type S digi that will not only respond to the new WIDEn-N paradigm, but will also respond to TNn-N. While I'm at it, I'll be moving the IGATE to the same location, using the same TNC. The IRLP/Echolink computer is going up there with the repeater, and since the same computer runs the IGATE, the whole package is going. I hope to have it on the air the second week in October.

Yes, my IGate is configured to be a backup for your IGate, so if I don't hear it for over 30 minutes, my IGate will start gating appropriate packets out.

There are some other IGates in the area also that provide some duplicate coverage to your IGate.

From: tennesseestargazer
Topic: 2397 Message: 2397

What happens when you put 12 volts on a 5 volts circuit? Chips go bad! The weather station board I have has a poor design. The 12 volt input is next to a 5 volt output pair of pins. The design should have made the pins different in some way. The best would not be using the same type of pins for all of the inputs.

I know I blew the microcontroller, I hope I did not blow the LCD display or barometric sensor. I will not know until I get the new microcontroller.

2403. GPS with WX display capabilities

Yahoo group: EastTNAPRS
Date: 2006-09-25 18:30:20 UTC
From: William McKeehan
Topic: 2403 Message: 2403

One question that came up on the net last night was what would the ideal mobile APRS solution be without a computer. Also, price was not an issue.

My first suggestion was the Kenwood TM-D700 and an AVMap GPS unit.

The person asking wondered if the AVMap had the ability to display weather information. Price has always been an issue for me, so I've not had the need to investigate the features of the higher end GPS units. So I did not know the answer to to his question.

I have done some research and found that the Garmin GPSMAP 478 looks like it fits the bill. It has a reasonably large color display, supports XM WX Satellite Weather (with an optional XM antenna).

Here's the garmin page with more information on this unit:
http://www.garmin.com/products/gpsmap478/

It looks like they have others which will do similar things, like the GPSMAP 376C: http://www.garmin.com/products/gpsmap376c/

It's not easy from their web site to see which units have NEMA support via a serial cable, but if you dig into their manuals, you can generally see if it's an option.

Anyone else have a suggestion for the ideal GPS unit if cost is not an issue?

2415. APRS Overview

Yahoo group: EastTNAPRS
Date: 2006-10-09 18:35:37 UTC
From: William McKeehan
Topic: 2403 Message: 2415

Bobby,

I have had intentions of responding to this note for a while, sorry for the delay.

APRS is a system developed by Bob Bruninga, WB4APR, in the early 1990's. APRS was designed for tracking and digital communications with mobile GPS equipped stations utilizing amateur radio.

The APRS system was designed to support rapid, reliable exchange of information for local, tactical, real-time events or nets. The concept is that each station with new information transmits his new data to everyone in the net and every station captures that information for consistent and standard display to all participants. THE GOAL IS COMMUNICATION, NOT JUST VEHICLE TRACKING. It is ideal for use in Public Service Events, Emergency Operations and Weather Station Reporting/SKYWARN activities.

APRS uses a simplex 2 meter frequency (144.39 across the US). It operates at 1200 baud. There are a variety of APRS station types, just like voice ham stations: Home, Mobile, Portable, Weather, Repeater (digital repeater or digipeater for short), and IGate. Each station consists of a transceiver a TNC and generally a display and (when mobile) a GPS unit.

Mobile tracking installations utilize a GPS connection to the radio through the TNC interface, although the "APRS Ready" Kenwood TM-D700 has their own built-in TNC.

A portable tracker is usually low powered-like an HT with a GPS and a TinyTrak3 (www.byonics.com) or a Kenwood TH-D7 with a GPS. These units work well with bike-a-thons, parades and other community events, along with search and rescue operations.

Weather station setups with APRS are similar to normal setups, but the GPS is usually replaced by outside weather monitoring equipment.

IGates are stations that feed data to and from the internet. www.Findu.com is a database archiving weather, position, telemetry and message data.

Home stations usually involve a laptop with a graphical display. The most popular Windows APRS software is UI-View32. You must register the software, but there is no registration fee - it is asked that you make a donation to your local or national cancer research organization. UI-View32 is available at www.ui-view.org

APRS is growing in popularity in East Tennessee; I've been involved in 3 events this year where APRS was really used.

In the Knoxville Marathon, APRS was used to track the lead runner and then the last runner. It was accomplished with a Kenwood TH-D7 on a motorcycle following the runners and one APRS station at the Start/Finish line using a Kenwood TM-D700 connected to a laptop running UI-View32. We had plans for a couple of portable trackers to help keep track of some shuttle buses, but we had issues that made those inoperable.

The next event was a bicycle ride called the Tour de Blount. It was a 25, 50 and 62 mile ride in Blount County. Here we had several more stations - everyone mobile (5 SAG vehicles) had APRS abilities and we had a station setup at Net Control using UI-View with a KPC 3+.

The most recent event was the Cherohala Challenge - a 115 mile ride with a climb up to 5477 feet. All of the SAG vehicles and a couple of stations at rest stops and another at Net Control had APRS capabilities. It was a route that required 3 repeaters to cover the event, so we were concerned about APRS coverage. We did a lot of pre-event route analysis/testing and used that information to determine the location for our temporary digi's. All-in-all, the APRS coverage turned out to be at least as good as the voice coverage if not better.

In all 3 events, using APRS provided great benefits to those of us mobile as well as to the event coordinators. As they say, a picture is worth a thousand words.

Probably the best way to get started with APRS is to get some APRS software and begin monitoring what is going on. This can be done with a computer and an internet connection or a computer and a radio or a computer, TNC and a radio.

The software that I would suggest is UI-View32. You can get it here:
http://www.apritch.myby.co.uk/uiv32_uiview32.php?lang=english

Feel free to post questions to this group that you encounter during the setup or initial running of this software.

Hope this helps!

2416. APRS Documentation

Yahoo group: EastTNAPRS
Date: 2006-10-09 21:07:04 UTC
From: William McKeehan
Topic: 2416 Message: 2416

I'm working on some APRS documentation for the local area.

So far, I have a few pages in a Wiki:
http://mckeehan.homeip.net/wiki/wikka.php?
wakka=AutomaticPositionReportingSystem

I would like to ask you guys to have a look at what I have and provide feedback and corrections or fill in any blanks that I may have in what is there.

2417. 2nd weather station board

Yahoo group: EastTNAPRS
Date: 2006-10-11 02:57:40 UTC
From: tennesseestargazer
Topic: 2417 Message: 2417

I ordered another board from the the guy who designed the microweather board. It came in the mail today. I have it assembled, minus the sensors and display. It is communicating with the PC and I have done some basic programming. When I connect it to a radio, it should show up as KG4UJC-14. I need to order the pressure sensor and humidity sensor.

Still waiting to find out about the tower site in Campbell county along I-75. Will post when I find out.

2418. wind gauge

Yahoo group: EastTNAPRS
Date: 2006-10-12 00:38:32 UTC
From: Jay
Topic: 2418 Message: 2418

Hi everyone. this question maybe doesn't belong here and I will not have any hard feelings if you pull it off. I was wondering if anyone could sugest a low cost wind gauge that I could mount on top of my tower , either wireless or not. un breaking my rotor on my beams in high wind is always a worry of mine. they are located a little from my shack and could be getting wind that is not at ground level. any advise would be greatly apreciated,,,,ki4mzg Jay

The WX station that I picked up may do what you want. It was $99.

See this message:
http://groups.yahoo.com/group/EastTNAPRS/message/1539

But be aware, not everyone has been happy with the LaCross:
http://groups.yahoo.com/group/EastTNAPRS/message/1612

You may also find something here:
http://www.aagelectronica.com/aag/

Maybe someone else has some more ideas. Joe maybe?

2420. Plans for inexpensive tnc

Yahoo group: EastTNAPRS
Date: 2006-10-12 17:40:49 UTC
From: tennesseestargazer
Topic: 2420 Message: 2420

I found some plans for a "PIC" microcontroller based TNC. See http://www.n9cx.com/BobBall.htm for links to plans and parts list. Since I have a PIC programmer now, I'm going to try building it. Microchip has free samples available of the 16F88 chip. I have downloaded the source code for the program. Total parts cost should be under $25. I have most of the parts already. I'll post my progress on the project.

Another iron in the fire!

From: tennesseestargazer
Topic: 2418 Message: 2421

My home station is a LaCrosse WS-2310. It has wind and rain guages, pressure, temperature and humidity. It can be wired or wireless. I've seen prices for the system from $130 to $200, depending on where you shop for it. The APRS weather station uses a wind sensor using the Dallas "onewire" interface. It costs about $80 for the sensor assembly. You have to provide the rest of the station.

From: Ed Dial
Topic: 2429 Message: 2430

Well, we took all the hardware for the new DIGI and IGATE to the mountain and tried to get set up. Everything worked OK except for the IRLP/Echolink gateway. For some reason, repeat audio was non-existent, so I had to take the hardware back down for repair.

I'll try again either next week or the week after. I'm pretty sure it's a software driver issue.

Did you find anything on this today?

By splattering, you mean someone is over-deviating? That would be pretty easy
to do with a Soundcard interface, but I had that problem with my TinyTrak3.

We are currently working on that there is a lot to get done for our next fight as we are going to be testing several different systems that will aid us in the crossing of the Atlantic Ocean, which we hope to do sometime this spring. We have no Set Date for any launch right now but if you would like to stay up to date on the Currents and Previous missions you may visit our web site
http://balloon.utarc.org/
We have got to get a few more thing figured out before we actual create a page for the latest mission witch we hope to have resolved in the next week or so. Once we get the Hardware together and tested we will then release a launch date a week to two weeks in advance. If you have anymore question about the Projects you can email me back at this address or at jculver1@... Hope this helped. 73's

2441. Camping trip this weekend....will be testing

Yahoo group: EastTNAPRS
Date: 2006-10-19 00:10:00 UTC
From: tennesseestargazer
Topic: 2441 Message: 2441

My wife and I are camping this weekend at Big South Fork. I will be taking a APRS weather station for testing. I will program in the position for the campground in the station. From the campground, the 147.360 repeater works well. We are going up friday morning, that evening, if someone could, please monitor that frequency. I will call to see if the station appears on APRS. I don't have a laptop to take to be able to reprogram the digi paths. I have it set for wide1-1 and wide2-1. Hopefully this will work. I have an amp I may hook up to the radio to boost the output.

The main reason for the camping trip is stargazing. We are doing a program saturday night for the campers and next week for about a 100 scouts.

2444. Digi Update

Yahoo group: EastTNAPRS
Date: 2006-10-20 01:20:58 UTC
From: Travis J. Maclay
Topic: 2444 Message: 2444

Hey guys,

Man, I've really been out of it for a while as far as APRS is concerned. Last time I talked to Scott Wyrick, he still was not ready for the TNC for the new digi.

So, what I'm basically wondering is ... what's the status of any new digi's in Knoxville? Are we still pursuing a new digi site w/ the antenna we purchased?

Looking forward to getting back to APRS soon when things slow down just a bit.

Hey all,
This is Jonathan KI4GBV i just joined thes mailing list but i would like to tell you all that the UT Amateur Radio Club is going to be putting a digi in the Top of Farris Hall hopefully with in the next month or so. We will be installing it all Nov. 11&/or 12 durning our Ham Radio Boot Camp. I belive the only thing that we are missing at this time is an Antenna and Cable witch we have no idea at this time what we are giong to use and what the acutal coverage will be. It will not be from our Main Antenna on top of the Stadium so that we can still use it for other Operations. If anyone would like to contrubute to our efforts please let me know.

Do we really want another WideN-n going up so close to Ed Dial's WideN-n digi near Greentop? I think we may need to rethink this through. That location was ideal to hopefully come close to doing what KJH was doing, but Ed's digi is going up in the same area with perhaps the same coverage. Things have changed since the antenna purchase and delivery. We need to hold off on the Greentop digi for now. Comments?

Wow your ESPN 3 is working goooood!

I just finished talking to Scott, he is ready, the antenna is ready to go up the tower... what do we do now? He is paying a tower guy $200 to clime it and mount it.... in the next couple days... he had planned to do it today but the weather stopped him... from what I understand the next good day it's going up.

Do we go forward or what? We need to decide what to do, it is push come to shove time.... I know we are going to WA4RYW's digi up and this will be fairly close... to where this one will be.... Greentop Mountain.

I need some direction... but to be honest I need some help... I am now the Asst EC for Anderson County, between studying training stuff, working on updating ARES call stuff and working issues with Skywarn I had totally forgot about this....can I get some help keeping up with this? Till about 30 minutes ago I had totally forgot about this with everything go on... not to mention the birth of Joshua has made my busy life insane at the moment...

If someone is willing to help PLEASE yell I need it bad. :)~

2448. Re: [EastTNAPRS] Digi Update

Yahoo group: EastTNAPRS
Date: 2006-10-20 14:40:11 UTC
From: William McKeehan
Topic: 2444 Message: 2448

I would agree. With Ed putting a digi up in a location similar to KJH (as a result of other things he's putting up there), I think his digi will solve the issue that we had originally intended for the new digi to address.

And with the addition of W4ACA north of Knoxville (with what appears to be good coverage), I don't have a location in mind now, in the general Knoxville area, where a digi is needed.

I think the following locations are areas just outside of the Knoxville area that would benefit from a high-level digi:
Clinch Mountain
somewhere up in Campbell or Scott counties
Greene county
Monroe county
Rone county
I do not know of any potential locations in these areas and I do not know how the people that contributed to the "new digi" would feel about having the equipment they purchased going to any of these areas.

This may not sit well with some on this list, but here's what I think right now. If you disagree with me, please let everyone know why - I may be wrong and I would be more than happy to discuss/debate it.

I think that once Ed's digi is in place, the following digi's are the ONLY ones in the Knox, Blount, Sevier, Anderson, Jefferson, and Hamblen counties that should remain operational:
Ed's digi (WA4RYW-1) - Big Digi covering Sevier, Jefferson, East Blount and South Knox counties
W4ACA - big digi covering Anderson, and North Knox counties
WA4BDS - fill-in digi covering South-West Blount county
WX4MRX - fill-in digi covering North Jefferson and Hamblen counties

I think all other digi's should re-evaluate their potential value as even fill-in digi's. I would propose doing this by shutting down your digi if it's not on the list above and trying to identify coverage "holes". Then evaluate your digi to see if it covers the holes.

Less digi's create less duplicate (i.e., un-necessary) packets and improve the overall performance of the network.

On a related note, once Ed's digi/IGate is in place, I think all IGates in the area can shutdown as Ed's location should cover everything that existing IGates are covering. I will be shutting mine down at that time.

I may be pre-mature in suggesting these changes since Ed's digi/IGate is not in place, but I figure this will give us time to discuss the situation and plan for what is to come shortly.

So my cards are on the table...let's hear from some other members in the group.

Fyi gents,

I found the problem with the IRLP audio gate, so I will be re-installing the hardware (Digi and Igate) this weekend. Once on the air, you guys can get a feel for what and where else you need pretty quickly.

Hope this helps.

Subject: [EastTNAPRS] APRS Antenna on Tower?

Hey Scott,

After the talk we had the other night about the antenna getting ready to go up on tower... I told the group... then discovered we have another digi going up close to your location.

Ed Dial WA4RYW is replacing the current WA4KJH digi with a new widen-n digi on Cove mountain. We think this will be up and operational in the next couple of weekends.

Can you wait before spending the money to have it done till we can make sure we are not going to be doing duplicate efforts?

Thanks, 73

Looks like you probably found the UI-View32 software that you were needing to get up and going with APRS.

I recently answered a similar question on this group, so you may find this message helpful to getting started:
http://groups.yahoo.com/group/EastTNAPRS/message/2415

Also check out the links section of this group:
http://groups.yahoo.com/group/EastTNAPRS/links

Almost any APRS software you could want is listed in these links.

I'm glad to see another sation operational. Good luck and have fun!

go to:
tapr.org
you can find all sorts of excellent shareware software for your tnc.. terminal programs as well as the latest aprs programs. my favorite dos program for standard packet is PAKET. there are others, but i've used it for years. you can also run your tnc via a standard "windows" terminal screen, but it's a little difficult to set up.

2459. Problems with integration

Yahoo group: EastTNAPRS
Date: 2006-10-23 16:07:33 UTC
From: Ed Dial
Topic: 2453 Message: 2459

Well, I guess everyone has noticed that the DIGI is not up yet. I had it up on a temporary antenna for around three hours last night. Did anyone see it?

Due to problems unrelated to APRS (IRLP and Echolink), we had to take the hardware back down for re-working again. The problem continues to be system integration with the MSR-2000. I'm finishing the rework this week and shall try again next weekend.

Ed;

Yes I spotted it about 6:45PM and there was a discussion about the new digi
on the APRS net last night.

What is the elevation at the site location?

Many thanks for the efforts.

It's around 3700 feet I think. It's very near the 146.85 site.

We were working on the interconnect problems and didn't have time to set the levels properly. I wasn't sure if it was "decodable" or not. The IGATE should have been beaconing across it as well, as it was up for the same amount of time. Both -1 and -7 should have been online for the short period.

If I don't get past this IRLP problem this weekend (It's killing me in driving!) I'll take the APRS hardware and install it in a separate chassis from the IRLP/Echolink hardware and leave it online. As it is now, I have all the hardware (except for radios) installed in a single 1U rack mounted chassis. It looks really neat. Now if I can only make it work! :-)

As Roy mentioned, it was noticed yesterday evening and appeared to go up and down.

One thing I noticed was that while I was able to hear it, it did not appear to be able to hear me. It would not respond to any packets that I sent it's way.

2466. APRS Announcements

Yahoo group: EastTNAPRS
Date: 2006-10-27 18:10:09 UTC
From: William McKeehan
Topic: 2466 Message: 2466

Over the past few weeks, I have been sending announcements via APRS based on information from the Sunday Night Net. They go out 3 times a day (6:58 AM, 4:58 PM, and 7:58 PM).

Each announcement goes out 4 times at approximately the times listed, then plus one minute, plus 3 minutes and plus 6 minutes (so 6:58, 6:59, 7:01, 7:04 for the first one of the day).

The path is WA4KJH-7,WIDE2-1.

I have two questions about these announcements:

1. Have you seen them?
2. Are they valuable?

Thanks for input!

2467. Traffic Information

Yahoo group: EastTNAPRS
Date: 2006-10-27 18:31:31 UTC
From: William McKeehan
Topic: 2467 Message: 2467

Guys, I'm looking into putting traffic information onto APRS.
Currently, I have been able to take data from the TDOT web site:
http://tinyurl.com/yhs7ay
and have converted it into the following potential APRS bulletins:

SR-35 in Cocke widening will temporarily slow traffic 3/6/06 to 10/
SR-349 in Greene bridge replacement will result in a lane shift 6/3
I-81 in Jefferson interchange modification will result in a lane sh
SR-35 in Jefferson bridge replacement will temporarily slow traffic
SR-67 in Johnson 09/20/2006 to 12/25/2006 .
SR-169 in Knox widening will result in a lane shift 10/11/02 to 10/
I-40 in Knox widening will result in a lane shift 5/1/02 to 12/30/0
SR-62 in Knox bridge repair will cause temporary lane closures 09/0
I-40 in Knox widening will temporarily slow traffic 04/13/2005 to 0
SR-131 in Knox widening will temporarily slow traffic 04/20/2006 to
SR-68 in Monroe bridge repair will result in lane closures on weekd
I-40 in Roane & Loudon interchange modification will result in no s
SR-34 in Sullivan will close the roadway on weekdays from 5/18/06 t
SR-358 in Sullivan 10/09/2006 to 11/30/2006 .
SR-75 in Sullivan 11/30/06 .
SR-36 in Washington widening will result in a lane shift 9/3/04 to
SR-353 in Washington 07/28/2006 to 10/15/2006 .
I-75 southbound in Knox - Crash at MM111 reported at 12:50 PM 10/27

Would this information be helpful as APRS bulletins? I'm working to
convert it to objects, but I have to translate what they are
providing on the web page to lat/lon to place it correctly.

Thoughts?

2471. Quiet Group and Net

Yahoo group: EastTNAPRS
Date: 2006-11-06 02:18:29 UTC
From: William McKeehan
Topic: 2471 Message: 2471

Things seem to be quite with the group. We only had 8 check-ins to the net tonight and I see that we've only had 1 group messages over the last week.

That could be a good thing - this group and the net were established to help people get their APRS stations up and operational. Maybe everyone has their stations at the level that they want them, or at least all of the knowledge that they need to take them as far as their pocket books will let them go for now :-) (the pocket book is certainly one of my biggest limitations).

As for me, I've been playing with other forms of packet and actively involved in the discussions on the Tennessee_Digital_Group Yahoo! group:
http://groups.yahoo.com/group/Tennessee_Digital_Group/

I encourage everyone on this list that has an APRS station operational on RF to look into other forms of packet. Generally, they're only a piece of free software or two and a QSY away from being operational with other forms of packet if you have an APRS station. What's "the latest stuff" that you will get to play with by using other forms of packet? Winlink2000 is probably the biggest player right now; imagine being able to send and receive e-mail messages without the internet - you can do that with Winlink:
http://www.winlink.org

Getting back to APRS discussions, the Blount County ECS group provided communications for the Mill House 15K race this morning in the Walland area. It was a short event, but APRS was included as part of the communications plan and worked out very well. It was accomplished using 4 APRS stations; one in lead - KI4HDU-9, one in trail - KF4QVI, a temporary digi along the route - WA4BDS-3 and a display station setup at the start/finish line with the race director KE4FGW-9. The event went very well and the race officials were impressed with the step-up in technology being used at the event.

In relation to that, if anyone has knowledge of APRS Dos, I would like to learn more about it. As I understand it, APRS Dos has a "dead reaconing" version (APRSDos DR) that will let you create a path for an object to travel. You can then position an object along that path, give it a speed and it will follow the path at the given speed until you change it. This would allow you to estimate the location of things that move along a set path without having a tracker attached to them. Some things that could be done this way:
Lead Female
The PACK

Lead Wheel chair
Any other easy to recognize runner.

With winter comming on, many of us will have some more inside time to spend learning about different pieces of software, I hope we all take advantage of this time.

On these lines I'd like to build two APRS portable stations using Open Trackers or Tiny Trackers to stick in lead and tail patrol cars for events like this. METERS will be doing the Strawberry Plains 1/2 Marathon in February '07 which would be a great test of such trackers in a remote area. This would also be a great test prior to the Knoxville Marathon on April 1st were the race directors are already looking forward to seeing APRS in action again there. They have already contacted me about running the event just like we did last year using APRS. I'll get with Jerry Moore about this for next year's event. I just want everyone with APRS to be thinking about helping out at this event next year. It's only five months away.

In APRS+SA does it let you have an object follow a path or just set a course/speed and it travels in a straight line?

Dead Reckoning 'ON' is the default setting in APRS+SA and when I first set up
the program I thought I was tracking a lot of Airplanes. I turned the
feature off
and I never used it. again. I think it uses the last direction and speed
to project
a straight line.

That feature comes in handy when I'm tracking a balloon payload. Those
tend to not change direction very quickly.

---------- Original Message ----------
Subject: [Balloonatics] UAH balloonsat launch
From: "Jason Winningham"
Date: Sun, November 5, 2006 9:16 pm
To: balloonatics@yahoogroups.com

The UAH EE senior design students will launch two balloons this Saturday, Nov 11 from the NSSTC. Payloads will be cameras and various atmospheric sensors. Flights will be terminated by a mechanical cutdown. The mechanical cutdown is a bow release triggered by a modified servo (Justin Toone KI4RIR came up with the bow release idea). First launch will be around 10am with the second launch to follow as soon as it can be filled and released.

balloon 1:
primary APRS 144.39 KI4RIR-11
backup APRS 144.34 KG4WSV-11
CW beacon 146.56

balloon 2:
primary APRS 144.39 KI4RIS-11
backup APRS 144.34 KG4WSV-12
CW beacon 433.800

It's possible that the UAH Space Hardware Club will make their second flight on Nov 18. I'll post more details as I learn them.

Yes, Xastir has that also. I have it set to dead-reckon stations (it shows a gost at the location they would be if they traveled in a straight line) for 15 minutes before it stops and shows them at their last known location.

But as I understand it, APRSDos DR has a feature where you can create a path (like the route for a race or whatever), then put an object on that path and have it follow that path at a specified speed. As you get updates from the "field" (i.e., first female runner at checkpoint 1), you can update the object's location and estimated speed for more accurate estimates. This seems much more valuable to me than following a straight line. It could be easily used to estimate the location of things during a public service event.

In order to try to get people with similar interests collected
together in one place, we now have the "SAR_APRS" yahoo group.

We intend to keep the focus on emergency groups only. "Normal" and
public-service APRS operations already have many excellent forums to
discuss such things.

Discussions about the use of APRS in SAR and similar organizations
ends up getting spread across many mailing lists, making it
difficult to collect a critical mass in one place.

If you have an interest in using APRS for SAR and/or other emergency
groups, please subscribe to this list:

From: Bill Farnham
Topic: 2470 Message: 2486

I would love to be able to attend. But I'm afraid I would run into a conflict with a theatrical production I'm in at Roane State. Otherwise would be there.

Am particularly interested in Skywarn. Also happy to hear of local interest by several in establishment of Winlink 2000 stations in East TN. This is something that could significantly enhance emcomm abilities in our area. This is especially true given the fact that it is perfect for the kind of traffic we attempted to handle for nearly 4 hours (one message about bed availability) during the recent Dept of Homeland Security Full Scale Exercise for hospital net.

I believe it can be. I know when I have the serial port on the board connected to my computer, I see data packets each time the unit transmits. Someone asked if I would build them. No problem, I enjoy this stuff.

Here is text from the designers site:

--You can use the datalogger output of µWeather☐ to add regular weather reports to your Kantronics digipeater. In addition to µWeather☐ and the Kantronics TNC, the only additional equipment required is a null-modem serial cable to connect between the TNC and µWeather☐. In order to use µWeather☐ to add weather reports to your digipeater, make the following changes to your Kantronics TNC configuration (the TNC must be running 8.2 or later firmware):

Thanks for picking it up tonight Joe!

The latest net script is here:
http://mckeehan.homeip.net/wiki/wikka.php?wakka=EastTNAPRSNet

The only announcement that I know about would be the Roane County Hamfest next weekend. See http://www.ke4rx.org/hamfest/ for complete details.

I've not heard anything about WA4RYW-7 and I have not seen him active recently.

No worries about it taking time Ed, anything worth doing is worth doing right.

I only mentioned it because it generally comes up during the Sunday night net. I think there are several people (myself included) that are anxiously anticipating the new digi being in place so we can convert to the new WIDEn-N style of paths.

2498. Hello there all fellow APRS users!! I have a GPS for sale.

Yahoo group: EastTNAPRS
Date: 2006-11-12 16:28:56 UTC
From: John
Topic: 2498 Message: 2498

Ok, I hope this is not a problem that I post a GPS unit for sale here. I mean it IS a useful item for APRS users. Sooo if this is inappropriate then please let me know and I apologize. Otherwise here it goes. I have a great condition Garmin GPS3Plus with soft case, Ram suction cup window mount, DC (cig lighter) power cable, and manual and addendum to manual in PDF format on CDR. Works great!!! And would be a great add on to an APRS station or the beginning of one! I would like $125 for it all. E-mail for more questions etc.. etc...
If I can I'll post a picture of the items int he files section. Thanks to all!!

2501. portable, self contained, APRS Trackers

Yahoo group: EastTNAPRS
Date: 2006-11-13 20:59:38 UTC
From: William McKeehan
Topic: 2471 Message: 2501

I agree on building the portable APRS stations. At most of these events, there is a police escort and it would be nice to take advantage of that vehicle being there.

I'd like to build a box that you could set on the top/trunk of the car and have it all self-contained and designed to run for 6-8 hours.

Anyone have ideas on building such a beast? The insides seem like the easy part to me - a GPS, TinyTrak and 2 Meter HT (or something similar). The container is where I run into problems. I've tried a couple of things, but found nothing that I would want to stick on the trunk of a car for an event.

Well UTARC has had a small device that we have built that we might be able
to help develop another one but it has a homebrew 2m transmitter and I
believe a tiny tracker that might a good design for what you guys are
looking for. You might want to put a better antenna and something that puts
out a bit more power but just something to think about.
On another note We are having our Monthly meeting tonight at the University
Center at 8pm room 214 if anyone is interested.

I've seen these in person and know a guy down in Jacksonville who put 8-10 of them together for events just like you mentioned. We used them quite often and they worked very well rain or shine. The case is a Pelican brand which is waterproof in and of itself. Four magnets are mounted to the bottom of the case to adhere to any metal surface you can find.

Here's a link to a picture:
http://www.dbbear.com/ares/news/tracker.jpg

More info on the Pelican case can be found here:
http://www.pelican.com/cases_detail.php?Case=1400

MSRP is $87.25 without the foam interior and $101.95 with the foam interior.

A quick Google search, however, reveals a few places where you can find it cheaper:
$58.99 - http://www.lapolicegear.com/pe14ca.html
$63.00 - http://www.casesbypelican.com/app-1400.htm

Note that the $63.00 entry is for the "static" version which contains anti-static polyurethane foam and convoluted lid for ESD protection.

That's my thoughts on a good solution for an all-weather case.

You can find these every once in a while at hamfests. I would like to own several of these, but just can't justify the expense.

The Tour de Cure is another event that could use something. But it is over a 2 day period, might want to make something a little more robust.

The MS150 is similar, I believe, but they do not have a police escort for that event. Do they have an escort for the Tour de Cure?

The way I've seen it done where you don't have a police escort is to provide an escort with an APRS equiped HAM.

But even with a multi-day event, the course is generally not open more than 8 hours per day, so a battery powered box that could last for 8 hours seems reasonable to me. One would have to plan to have replacement batteries.

I had not seen that before. Interesting little project.

In my mind, the features that a "perfect" APRS tracker would have are...

1. Single "box" construction (i.e., no external wires/antenna's to run)
2. Magnet mountable
3. 1/2 (or 5/8) wave 2-meter antenna
4. Single re-chargeable battery (power source really, could be 9 AA's for example) to power everything
5. External connection for optional 12-volt in power that would run the equipment and charge the onboard battery
6. Able to run a minimum of 8 hours on a single charge.
7. Frequency agile - while most of the time the system will operate on 144.39, if you have a lot of them, it may be beneficial to operate on a "net" frequency with dedicated digi's.

I'm not sure what the ideal radio or TNC would be. I think that for the most part, 5 watts of ouput power would be sufficient.

What does everyone else think?

Hey guys,
I talked w/ Carl Lyster (WA4ADG) about it last night at our meeting (UT Amateur Radio Club) and He said that building a TNC w/ a 2meter Transmitter (that puts out .5w) would only cost about 20 bucks but expensive part is the GPS, We use the Hock puck looking Device From Garmin for our Balloon but really any type of gps receiver that is meant to hooked up using your Serial input will work. We have used some older Radio Shack units for other flights. Something like that could be easily put in to a plastic container and stick some magnets on the bottom and 1/4 wave antenna on top and you are looking under a 100 bucks for the unit. The only concern I had was the power but that can be worked on. Let me know what you all think about that?

The 0.5w transmitter would be the downside for me. That kind of power would work well on something like a balloon flight where you have the antenna very high, but if you put it at ground level, it's generally not enough power to get out. The transmitter part I would want to change to be tranceiver...it needs to listen if nothing more than to make sure the frequency is clear before it transmits for maximum efficiency.

IMHO

I did a bit of Google searching for NASAR and quickly found their web site (http://www.nasar.org/nasar).

From there, I found that they have an instructor in Newport. I have sent him an e-mail asking about groups in East TN that may be looking for Ham assistance with SAR. I'll keep you all posted about what I learn.

Could be fun and is certainly a good fit for APRS. For more about using APRS for SAR events, check these web sites:

http://nwaprs.info/sar.htm

2515. RE: [EastTNAPRS] portable, self contained, APRS Trackers

Yahoo group: EastTNAPRS
Date: 2006-11-17 05:02:27 UTC
From: Travis J. Maclay
Topic: 2471 Message: 2515

No, he built them over 2-3 years, so it was mix & match. Actually, not all 8 were made from the pelican cases, only the last 4 or so. He experimented with different enclosures and finally settled on the pelican after trying it. All of them had the large magnets, however.

Garmin GPS20 engine was used on most of them. Small mag-mount GPS antenna w/ MCX connector used. TNC's used were PK-12's I believe. Finally, he used the 2-meter Radio Shack HT's for the transceiver. All in all, it worked really well. He added a few other circuits so that he could see a visual display of battery voltage from the outside as well as a switch for powering the device on or off.

He's since moved on from APRS and I've tried for 2 years to get him to sell them to me. Most have been disassembled, but he has all of the components in a box. I'm still working on it, but it's been quite a while now and no success yet. He claims he wants to, but needs to sort through it first and he's trying to finish his doctoral degree. Anyways...

73,
Travis

2516. weather station board and meteor shower

Yahoo group: EastTNAPRS
Date: 2006-11-17 19:19:23 UTC
From: tennesseestargazer
Topic: 2516 Message: 2516

I'm going to try to go camping this weekend and take the weather station board again. I sliced my hand yesterday and had some stitches, so it depends on how much my hand is throbbing.

The main reason for the camping trip is this weekend's meteor shower. If the sky is clear saturday night, keep your eyes open on the eastern sky from 11:00 pm on.

We plan on being at Bandy Creek Campground in the Big South Fork. I will be monitoring the 147.360 repeater. The APRS weather station ID will be kg4ujc-13. I plan on connecting a power amp to the HT this time.

I'm still working on a price for the board kits. The 2 most expensive on board parts are the pressure sensor and the humidity sensor. I am also checking on a quantity price for the wind sensor assembly and rain gauge assembly. I will post the results. Usually the best price break on parts is in quantities of 10 or more. So, if we can get that many people interested,it would work better for us.

OK, the type S digi and IGate is online. The antenna is still lying on the roof of the building pending a tower climbing party, so the range may be sub-optimal. Please let me know how it's working. It strictly complies with the 2005 paradigm, so it will NOT respond to RELAY, and count the attempt as a dupe.

BTW, the IRLP and Echolink machine is up and fully operational as well.

Ed, I'm glad to see that you got all of the bugs worked out and have the unit up and running now.

What are you using for the IGate/Digipeater? Do you have the TNC in converse mode doing the digipeating and javAPRSSrvr connected as the IGate?

Have you considered running the TNC in kiss mode, using the AX.25 drivers in linux and using a combination of javAPRSSrvr and digi_ned (since javAPRSSrvr does not support WIDEn-N digipeating)? That's what I run at home...give me a lot of control over what I digi.

It's interesting to me to look at the raw packets on findu.com and see that, most of the time, my IGate is the IGate that puts WA4RYW-7 into findu. I would have expected WA4RYW-2 to be the primary one.

BTW, my IGate is setup in backup mode again; always gating to the internet, but only to RF when WA4RYW-2 is down.

HI WILLIAM

WE HAD A DESENSE ISSUE WE CORRECTED RESTORING ITS SENSATIVITY. I HAVE TRACKER BOXES MADE UP WITH 28AH BATERIES, A GARMIN GPSIII, A TINY TRACK AND YAESU 1699M RADIOS. THEY ARE BUILT IN A PLASTIC AMMO BOX FROM W3ALMART. I RECENTLY ADDED POWERED GPS ANTENNAS SO MOST OF THE TIME THEY GET A FIX AND KEEP IT BETTER.. THE ONLY THING COMMING OUT OF THE BOX IS A PIGTAIL TO CONNECT AN ANTENNA TO. THEY ARE ABOUT 259.99 EACH TO BUILD AND TRACK VERY WELL. THE BATTERY WILL TRACK FOR 72 HOURS ON MEDIUM POWER. IF I CAN HELP YOU, EMAIL OR CALL 901 488 0612.

Ed
I guess I'm not the sharpest tack inthe drawer so I am a little
confused.
On my map I see WA4RYW-1 a diamond symbol and WA4RYW-7 a telephone
symbol. Which is actually the new digi and which is the I-gate.
Also I see the object for the IRLP5700 on 443.300, but can you give
us the freq and information on the ECHOLINK also. Does the echolink
use standard acess codes?
Also I have turned off my poor little local wide1-1 fillin digi
(in UIVIEW32) running at the house since this one will definitley
cover anything I could have possibly ever helped with before. Have
also updated my unprot address to wide2-2 instead of the old
wide,wide.
Thanks
Kent

From what I can tell, WA4RYW-1 appears to be the IGate and WA4RYW-7 appears to be the digipeater.

They each appear to be using a seperate radio/tnc setup because I can see WA4RYW-1's packets being digi'd by WA4RYW-7.

As for the echo link stuff, I'll have to let Ed respond to that :-)

I think you made the right decision in turning off your digi...I have done the same and my IGate is setup to act as a backup for WA4RYW-1, only gating things to RF if it has not heard WA4RYW-1 for more than 30 minutes.

2527. RE: [EastTNAPRS] Re: WIDEN-n DIGI online

Yahoo group: EastTNAPRS
Date: 2006-11-30 20:49:35 UTC
From: Ed Dial
Topic: 2491 Message: 2527

Hi Kent,

-1 is the IGate, and should be a diamond with an I in the center. -7 is the digipeater, and should be a green (star?) with an S in the center.

The frequency for Echolink is the same as IRLP. The same node does both functions. The only difference is to call an Echolink node, prefix the node number with a * (asterisk). The node number alone will engage IRLP. You disconnect from both systems with either a 1 or a 73, and check status of the node with a 00, or double zero. Don't forget the 100.0 Hz PL tone required to access the repeater.

The digi should also respond to TN as a path. If you were to use TN2-2 instead of WIDE2-2, it would only be digipeated within the infrastructure of the state of Tennessee. That addition, along with the new paradigm compliance, is what determines its TYPE S status (S in the middle of the green star).

As soon as we can get a tower guy on site, the performance should improve appreciably. The antenna is literally hanging off the corner of the building with a cinder block holding it in place. To top that, the IGate is using a rubber duck.

To answer an earlier question from William, I DO run the IGate with a KISS TNC, as the software completely controls the function, and the TNC is nothing more than a dumb modem in this mode. I have the digipeater running separately as a stand-alone unit in case the computer crashes for whatever reason. I'm a little apprehensive about operating a computer in such a dynamic environment, and that part is a bit of an experiment. However, by operating the digipeater as a standalone system, should the computer crash, the digipeater will press on. The digipeater is currently a Motorola Maxtrac and a Kantronics KPC-3+ TNC with version 9.1 ROMs, which has excellent digipeater support. The only modifications I plan to make to the current installation is to install a preselector/preamp on a two port multicoupler (split to both radios), and put the PTT lines on relays so I can feed both radios from the same antenna while attenuating off-frequency signals and cleaning up the receiver performance. The Maxtrac is a mobile radio and has limited front end pre-selection. The Yaesu that is being used for the IGate has NO pre-selection at all and is EXTREMELY broad-banded by design. Fortunately, the current configuration only requires it to listen to the digipeater, which is 10 inches away. It can still hear KJH-7 as well. The plan is to leave KJH-7 up to support anyone driving into the area that is still using the old method, but Keith doesn't directly support that system any longer. Its fate is out of our hands, or mine anyway.

My guess as to why William is the incoming gate for the digi is that his Internet connection must be faster/fewer hops to the IS server. The first IGate that presents a new node to the IS (APRS-IS = Automatic Packet Reporting System - Internet Service) is what is registered. All other IGates with duplicate data are filtered out by the IS server. Although I run the Southeast Tier 2 IS server and the IGate is on the same logical network (the mountaintop subnet accesses my home network via a 3DES VPN (added latency), there are actually 14 hops and around 300-350 ms round trip time. Incidentally, the last mile (the wireless hop) jumps from 78 ms (router 13) to the 350+ ms round trip. Using true point-to-point bridges here would improve this significantly. I haven't tested the connectivity of our 802.11 hop to the site, but there are certain inherent delays built in to an unmodified 802.11 device over a direct Ethernet connection. We're having occasional fade issues as well. Another project on the schedule is to improve our fade margin on the Internet hop.

73 - Ed

Ed, I must say, you have done some neat stuff with this installation.

Now that I think about it, having the digipeater setup with a standalone TNC seems like a good choice. There are lots of things that could go wrong in a computer - much less in a TNC.

I did not realize that your internet connection up there was wireless; come to think of it, my IGate is connected to my network using 802.11 also, but not from any real distance (<40 feet). How far away is that link going?

Good points, both. If you needed the fill-in digis before, you likely will now, especially with my "incomplete" installation.

As for WX data, it will broadcast WIDE2-2. Perhaps I should remove that from my IGate and you keep that feature operating as you currently have it configured?

Sent: Thursday, November 30, 2006 4:57 PM
To: EastTNAPRS@yahoogroups.com
Subject: Re: [EastTNAPRS] Re: WIDEN-n DIGI online

Just a dumb question? The fill-in digi... why would you turn it off? We are still going to have the same basic gaps that we had with WA4KJH correct? Unless I missed something the antenna is lower and same power output? Granted the location is different so that may change the holes in coverage...? Remember the the duplicate checking function of the TNC SHOULD stop muilti-pathing of wide1-1. My fill in just responds wide1-1 now I have removed the relay portion out of it to keep packets from getting to WA4KJH. I think we ALL need to keep them working for now, once we have time to see how it's going to work selectively take them down and see how the system responds. The small mobile trackers will still need help getting up to the high level digi's.

Question - the weather data output... will it come straight out of the digipeater now? I am I gating the weather data to W4ACA as SKYWRN so it only stays local to our area.... what is the path it will take now?

73, Moe

On 11/30/06, Ed Dial <diale@mindspring. <mailto:diale@...> com> wrote:

Hi Kent,

-1 is the IGate, and should be a diamond with an I in the center. -7 is the digipeater, and should be a green (star?) with an S in the center.

The frequency for Echolink is the same as IRLP. The same node does both functions. The only difference is to call an Echolink node, prefix the node number with a * (asterisk). The node number alone will engage IRLP. You disconnect from both systems with either a 1 or a 73, and check status of the node with a 00, or double zero. Don't forget the 100.0 Hz PL tone required to access the repeater.

The digi should also respond to TN as a path. If you were to use TN2-2 instead of WIDE2-2, it would only be digipeated within the infrastructure of the state of Tennessee. That addition, along with the new paradigm compliance, is what determines its TYPE S status (S in the middle of the green star).

As soon as we can get a tower guy on site, the performance should improve appreciably. The antenna is literally hanging off the corner of the building with a cinder block holding it in place. To top that, the IGate is using a rubber duck.

To answer an earlier question from William, I DO run the IGate with a KISS TNC, as the software completely controls the function, and the TNC is nothing more than a dumb modem in this mode. I have the digipeater running separately as a stand-alone unit in case the computer crashes for whatever reason. I'm a little apprehensive about operating a computer in such a dynamic environment, and that part is a bit of an experiment. However, by operating the digipeater as a standalone system, should the computer crash, the digipeater will press on. The digipeater is currently a Motorola Maxtrac and a Kantronics KPC-3+ TNC with version 9.1 ROMs, which has excellent digipeater support. The only modifications I plan to make to the current installation is to install a preselector/preamp on a two port multicoupler (split to both radios), and put the PTT lines on relays so I can feed both radios from the same antenna while attenuating off-frequency signals and cleaning up the receiver performance. The Maxtrac is a mobile radio and has limited front end pre-selection. The Yaesu that is being used for the IGate has NO pre-selection at all and is EXTREMELY broad-banded by design. Fortunately, the current configuration only requires it to listen to the digipeater, which is 10 inches away. It can still hear KJH-7 as well. The plan is to leave KJH-7 up to support anyone driving into the area that is still using the old method, but Keith doesn't directly support that system any longer. Its fate is out of our hands, or mine anyway.

My guess as to why William is the incoming gate for the digi is that his Internet connection must be faster/fewer hops to the IS server. The first IGate that presents a new node to the IS (APRS-IS = Automatic Packet Reporting System - Internet Service) is what is registered. All other IGates with duplicate data are filtered out by the IS server. Although I run the Southeast Tier 2 IS server and the IGate is on the same logical network (the mountaintop subnet accesses my home network via a 3DES VPN (added latency), there are actually 14 hops and around 300-350 ms round trip time. Incidentally, the last mile (the wireless hop) jumps from 78 ms (router 13) to the 350+ ms round trip. Using true point-to-point bridges here would improve this significantly. I haven't tested the connectivity of our 802.11 hop to the site, but there are certain inherent delays built in to an unmodified 802.11 device over a direct Ethernet connection. We're having occasional fade issues as well. Another project on the schedule is to improve our fade margin on the Internet hop.

Ed
I guess I'm not the sharpest tack inthe drawer so I am a little
confused.
On my map I see WA4RYW-1 a diamond symbol and WA4RYW-7 a telephone
symbol. Which is actually the new digi and which is the I-gate.
Also I see the object for the IRLP5700 on 443.300, but can you give
us the freq and information on the ECHOLINK also. Does the echolink
use standard acess codes?
Also I have turned off my poor little local wide1-1 fillin digi
(in UIVIEW32) running at the house since this one will definitley
cover anything I could have possibly ever helped with before. Have
also updated my unprot address to wide2-2 instead of the old
wide,wide.
Thanks
Kent

Hi everyone,
Just me again with another dumb question. With UI View messages is there a way to send a message directed at anyone, or rather not directed to anyone. as in; would it be possible to ask this question on aprs rather then here in the group. Would such messages be ok to post or would it just use up alot of digi time? Could it be considered "broadcasting" that is banned? thanks!!

Ed,

A couple of folks brought it to my attention tonight that the icon for WA4RYW-7 sometimes changes from a green star with an S overlay to a telephone (i.e., /$).

I checked my log and I see that sometimes you're sending out packets like this:

WA4RYW-7>BEACON:: ;WA4RYW-7*111111z3541.60N/08337.30W$East Tennessee Wide DIGI

Which has the telephone icon.

This looks like an object to me...I'm guessing that you did not intend for this to be going out.

Why are you using the btext anyways?

Most KPC-3 digi's just use the LT1 - LT4 text to send out the info.

I'm guessing that it's been a while since WA4KJH-7 has been looked at and tuned-up. I hope that the fresh installation of WA4RYW-7 will have better coverage than WA4JHK-7.

In my mind, the only way to get a clear picture of that coverage is to turn off the fill-in digi's and look for the holes.

2538. Re: [EastTNAPRS] can this be done ?

Yahoo group: EastTNAPRS
Date: 2006-12-08 16:30:34 UTC
From: William McKeehan
Topic: 2531 Message: 2538

Sure, I send messages out to multiple people all the time - I send them to everyone. These messages are APRS Bulletins or announcements.

General bulletins are messages where the addressee consists of the letters BLN followed by a single-digit bulletin identifier, followed by 5 filler spaces. General bulletins are generally transmitted a few times an hour for a few hours, and typically contain time sensitive information (such as weather status).

Announcements are similar to general bulletins, except that the letters BLN are followed by a single upper-case letter announcement identifier. Announcements are transmitted much less frequently than bulletins (but perhaps for several days), and although possibly timely in nature they are usually not time critical.

In UI-View, sending a bulletin or announcement is exactly the same as sending a normal message, but you address it to BLN1, BLN2, BLNA, BLNB, etc, and the APRS box must be checked. If your message spreads over several lines, then UI-View32 will automatically increment the last letter/digit of the address.

Bulletins are transmitted when they are first written, then the transmission period decays as follows (the values are minutes) 2, 5, 10, 20, and remains at 20 until you delete the bulletin from your Sent message list.

Announcements are transmitted when they are first written, then the transmission period decays as follows (the values are minutes) 2, 5, 10, 20, 30, 60, and remains at 60 until you delete the bulletin from your Sent message list.

NOTE - that you have to delete bulletins and announcements from the list to stop them being sent.

2548. FT-8800 soundcard cable suggestions

Yahoo group: EastTNAPRS
Date: 2006-12-23 01:20:41 UTC
From: kf4gnl
Topic: 2548 Message: 2548

I'm going to use a Yaesu FT-8800 for soundcard APRS without a TNC.
Any suggestions from the group on cables? Buxcomm RASCAL GLX,
Donner's, or a NOMIC Rigblaster?

Tnx in advance.

Scott

From: WB8ELK@...

There will be a callsign change for Saturday's flight from Huntsville, AL:

WB8ELK-12 on 144.39 APRS.

Surface weather still looks good for a launch between 1 and 2 pm
CST...Dec. 23rd.

Launchsite: NSSTC highbay - Huntsville, AL

34.73
86.64

I'm currently looking at the flight path prediction.....current forecast
is a flight path track that takes it north of Chattanooga, Cleveland TN
and just south of Knoxville TN....heads up to the UTARC group in case it
doesn't achieve a float as it will land near the Knoxville/Cleveland
area in that case.

I've been forwarding any info I get to the UTARC group. I can include the EastTNAPRS group as well if you like? With APRS on board, there may be someone here that is interested.

---------- Original Message ----------
Subject: WB8ELK-12 balloon weather is a go for launch at 2:00 pm CST from Huntsville AL From: WB8ELK@...
Date: Sat, December 23, 2006 10:29 am

Weather looks good for launch. I plan to take off between 2:00 and 2:30 pm CST. I will have to wait until the ozonesonde lifts off before inflating my balloon.

Location: NSSTC highbay, Huntsville, AL
34.725N 86.646W

I am shooting for 500 ft/min ascent with balloon sunset at 73,000 feet (if I get the ascent rate right, it has a chance of floating at that altitude after
the sun goes down)....this should occur near Cleveland, TN.

If I go up too fast (greater than 700 ft/min), then the balloon probably will burst before sunset and it will land near Chattanooga...one prediction shows Dalton, GA.

Basically the flight path will take it over Chattanooga and hopefully will stop ascending near Cleveland at sunset.

If it does indeed stop ascending at sunset, the final float altitude will make a tremendous difference on the flight path it takes from there....it could literally go ANYWHERE....just a few thousand feet will send it one way or the other since we are in a unique turn-around wind condition similar to that seen in early Summer. It's possible it could come right back towards Huntsville
or head to Mississippi. Lower float altitudes will take it to the Atlantic Ocean over NC.

David Hoffman - KE4FGW

---------- Original Message ----------
Subject: Ozonesonde to launch at 1:00 pm CST - WB8ELK-12 balloon to fly at 2:00 pm CST From: WB8ELK@...
Date: Sat, December 23, 2006 6:16 pm

The ozonesonde will launch at 1:00 pm CST....I will arrive at the balloon highbay just before then....still running flight path simulations...it's all over the map depending on float altitude...could be interesting...NC, VA, MS, FL, Puerto Rico and of course, The Bermuda Triangle are some of the predictions.

There is a digipeater on top of the building so you'll see me power up the APRS just prior to launch.

I'll probably be using a 1500 gram balloon instead of the 2000 gram I had listed earlier.

If I don't achieve float, looks like a landing just east of Chattanooga, TN.

I'm still looking at launching at 2:00 pm CST....no earlier than that....and as late as 2:30 pm but not much later than that.

WB8ELK-12 on 144.39 APRS

- Bill WB8ELK

For those who'd like to listen to the ozonesonde (will land near Chattanooga, TN around 4 pm EST)....you can find it on 402.5 MHz wideband FM ASCII telemetry tones...it drifts quite a bit so scan between 401 and 404 MHz.

From: David Hoffman
Topic: 2554 Message: 2554

Well I missed a good one. Sorry guys for bailing out and disappearing on everyone. But at about 5:15 PM I had a family emergency to take care of. It seems my daughter who is 9, got run over by one of the wheels to my 5'x8' utility trailer. None of us can figure out exactly how it happened. It just happened so quickly. Both my kids where riding in the trailer while I was driving it around to the front of the house when this occurred. The best I can tell was that she did not stay seated and therefore the accident happened. She is home now after a quick trip to the emergency room. She had a cat-scan to make sure there was nothing injured internally. She was released and told to take it easy for the next 24 hours.

So sorry everyone for not answering the phone when you called. This is why.

From: William McKeehan
Topic: 2548 Message: 2560

I was waiting to respond to this in hope that someone with an 8800 would respond first.

I don't have an 8800, and I've not used a wide variety of soundcard interfaces.

But, I've had great success with the Buxcomm Rascal. I have a couple of them now and they seem to work with no problems for me. I've used them with the Yaesu FT-817, Yaesu VX-5R, Icom IC-V8, and Kenwood TM-231.

So I would recommend the Rascal.

2562. APRS in 2007

Yahoo group: EastTNAPRS
Date: 2006-12-26 20:10:37 UTC
From: William McKeehan
Topic: 2562 Message: 2562

It is my hope that everyone on this list had a very Merry Christmas.

It is during this week between Christmas that I reflect on the past year and think about the new year to come.

In 2006, the membership in this group has grown. Net attendance has settled around 12-15 check-ins each week. The area digipeaters support the new WIDEn-N paradigm. Area coverage with digipeaters has grown; more of the area is covered with less digipeaters. More HAMs in the area are APRS capable than were in 2005. More public service events took advantage of APRS than in 2005 - I was involved in 4, there were some that I was not involved in. APRS was used in balloon chases and weather nets. Some groups tried using APRS as an alternative check-in method to their regular voice nets.

All-in-all, I think 2006 was a very good year for EastTNAPRS.

My personal Amateur Radio goals for 2007 are simple; I want to upgrade to a General class license. With the FCC removing the code requirement, I suspect I'll be in with a large group of other technicians that upgrade in the next year. I'll be upgrading to play with APRS and other digital modes on HF.

My hopes for this group for 2007 are also simple. I hope this group continues to grow and provide help to people interested in APRS in the area. I also hope that the use of APRS for Public Service and other events grows in the area.

I'm excited to see where EastTNAPRS goes in 2007 and hope you all will still be active in APRS this time next year.

What are your plans or goals for 2007?

Happy New Year!
73

From: William McKeehan
Topic: 2548 Message: 2563

I was reminded that the soundcard interface is not a complex circuit and most people can easily build their own for a fraction of the cost of a Rascal or other commercial interface.

A simple schematic can be found here:
http://www.mcminnarc.com/digital/digital.html

The audio goes through transformers to provide step-up/down and isolation - this helps to reduce the risk of RFI, ground-loops, or hum pickup. You don't need isolation transformers as long as the rig and computer are grounded properly (rig to a good RF ground, computer to grounded outlet).

This same interface can be used for things other than just packet. You can use it for PSK, RTTY, SSTV, etc.

A blank page is all I get! Is the URL etskywarn.org

OK, after several second (20 or 30, sometime a minute or more) the page did load. I worked for an ISP for several years. In my opinion, the home page has too much to load quickly. Make the home short, just basic info. Link to the other info from there. Every few minutes the page wants to reload. When it does, the page goes blank and takes up to a minute to reload. What program did you use to do the site? Looking at the IP address, is this running from a computer at home? The IP is listed as a comcast IP. That may explain the problem.

Joe mentioned this problem on the net last night and a couple of others tried it. I was one that tried it.

What I saw was very interesting. Sometimes the page loaded fine (2-3 seconds), other times it would go to the grey screen and sit for several seconds (like 30 or more) before the page was presented. I noticed that at least one time when the page took a long time to load that the "Live Morristown Radar" image did not load.

2569. Kantronics KPC3+ 128k for sale with Icom interface cable. $125

Yahoo group: EastTNAPRS
Date: 2007-01-04 20:11:02 UTC
From: John
Topic: 2569 Message: 2569

Hello all this is John... K4UAE and I have for sale my Kantronics KPC3+ TNC with an interface cable made for Icom RJ-45 radios. I used this setup both here in the shack with an Icom IC-2720, and mobile with two radios (Icom IC-2100H, and IC-207H) Works great!!! Will sell all including a CD with manual on it for $125. I will be at the Morristown hamfest selling in the boneyard or inside (depending on space) This saturday. E-mail me for any other info or if you may be interested in the TNC. I hope this is ok to post here. If not then please forgive me. I'll even throw in a Serial cable if needed.

Topic: 2573 Message: 2573

I took my motorcycle up to the hamfest in Morristown today.

On my motorcycle, I'm running a TM-D700 at medium power (approx 10 watts) into a 1/2 wave antenna. I'm using a path of WIDE1-1,WIDE2-1. It seems to work really well for most of the areas that I ride into.

Looking at the log when I got home, I see that my packets were initially heard by either WA4RYW-7, KA4TAR-7, AF4MS, WX4MRX, or KI4HDU-2.

Today's route was covered pretty good; the only gap that I see is north of I-40 up to about US25.

2574. WX4MRX digi upgrade

Yahoo group: EastTNAPRS
Date: 2007-01-07 03:57:44 UTC
From: William McKeehan
Topic: 2574 Message: 2574

In an effort to improve the communications between Bristol and Knoxville, I suggested that we try configuring WX4MRX as a WIDEn-N digipeater (as opposed to just a fill-in digi).

Moe had someone change the settings yesterday afternoon/evening on WX4MRX. Note that this requires more than just checking the WIDEn-N buttion in the digipeater setup screen.

From what I can see, it's doing the WIDEn-N as I would expect.

Time will tell if this is a good thing or not. So far, I don't see any problems with it, but I also do not see any thing new from out of the area.

Anyone else notice the change? Good or bad?

Hi William and the Group,

You failed to state "Which" US 25 'E' or 'W'. I will assume you ment 25E. Yes that area even has poor voice repeater coverage at best in certain areas, depending upon which machine or Digi you are trying to use.

Sorry about that; I had coverage on 25W in Dandridge, but lost it as I turned on to 113 to head North to 25E in White Pine. The dead area was basically between 25W and 25E. Coverage resumed once I started on 25E.

Yes, we are still having the net; every Sunday night at 8 PM local time (Eastern). The repeater is WB4GBI's 146.940 (http://www.wb4gbi.com/greentop.html).

As for the path to use, I can hear WA4RYW-7 and WA4KJH-7 direct. From Johnson City, if you can't hit either of those digi's, you may go via WX4MRX,WA4RYW-7 to get to me.

I hope you will forgive me changing the subject but was curious if someone knows who is using APRS on 146.850. He has now changed his identity to say Steve with some weird coordinates. Must be mobile because signal keeps changing. This was reported to me by phone in that I have traded automobiles and don't have a working radio in my new ride.

If he's putting out valid coordinates with his beacons, then one would have his location and could go and get the problem resolved. Can you provide times? Is it currently happening this Tuesday AM?

Gary;

For your information;

These packets were received at my location on 146.250MHZ RPTR Input Freq.
The Signal was near full scale and is toned to enable repeater operation.

I an located 4 miles south of downtown Maryville

Roy, Have you tried to listen to the same signal using a lesser antenna? Such as a rubber duck?

Can everyone on this group do as Roy has done and switch your APRS station to 146.250 FOR RECEIVE ONLY for a brief period and see if you can hear the station in question. This should give us a good idea of the general location for the transmitter. Please post the results back to this list.

For more on DF'ing with APRS, see Bob's page here:
http://web.ew.usna.edu/~bruninga/dfing.html

William;

I connected the antenna to my Icom IC-746PRO
The signal is S9 with the PreAmp on

Yes, they are still on APRS, but a local IGate needs to be configured to put
them out to RF for them to be visible to anyone not connected to the internet.

With that information, Xastir calculates that the distance from your station to the suspect station is less than 3.5 miles.

I've never played with DF'ing before, so this is yet another learning experience for me.

I'm guessing that the 3.5 miles is just a rough guess. If the station is putting out a lot of power or has a high antenna location, then it could be significantly further away than that.

I drove around some tonight in Blount County, all east, north east of Maryville, and if I had to make a guess, I would say out by Friendsville or north west of Maryville near Lousville somewhere. It got too late to keep driving around, but all indications are that this station is transmitting on 5 watts or more and has a decent location.

Tom will report his findings in the morning as he drives up Pellissippi Pkwy. Tom I think this would be a good advantage point to determine how far west of Maryville this signal may be.

Everybody needs to listen on 146.250 and provide signal reports from their location. Tell us what you are using for an antenna, a radio and gives us the signal strength of this station and your location. We can use as many of these readings as possible. Thanks

Sorry for the delay in getting back to you. I sold the one TNC and have another but am going to hang onto it for now. Thanks and again I apologize for the delay in time getting back to you. To answer your question.... with this TNC and cable then you would use it with the 706MKIIG and a GPS (if you want realtime updates of your position while moving) otherwise for a fixed location enter the position in an no GPS. You would need some form of APRS software to use also. I personally prefer Uiview... but there are many others out there.

Roy, and all on the group... I too was receiving these packets yesterday afternoon on the input (146.250) about an S9+ on my fixed station... rig is an Icom IC-2720, antenna GP-3 comet about 30'. I have the beam antenna and attenuator ready to do some dfing. Will be Friday afternoon before I can. But I'll check here in the yard when I get home today to try to get a bearing from my location. We should coordinate on a 220MHz freq. or some other means to discuss this during the hunting. Well off to work for the second half of Wed. I hope this helps some.

John, what is your location? Can you check the signal from an HT with a rubber duck and let us know how strong the signal is?

Also, I didn't hear anything this morning on 146.250 MHz. Is it gone?

I really enjoy DFing. I used to track down old burnt out TV
amplifiers that would cause intereference to the local 440 machines.

Looks like an unregistered version on WinAprs. More than likely a
legitamate ham who installed the software and placed his name "steve"
in the required fields but don't know the other parameters. Probaly
don't have a clue that it's beaconing on his favorite repeater.

You might could scan this database for a "Steve" in the local area.
http://hams.mapmash.com/mapOneZip.php?hist=zipmatch:37804&zip=37804

Good luck, I am interested to see how this turns out. Wish I was
closer, would enjoy helping.

Regards

2604. Re: Weekly net

Yahoo group: EastTNAPRS
Date: 2007-01-10 14:57:50 UTC
From: William McKeehan
Topic: 2577 Message: 2604

This is an interesting arm-chair expirement for me; as always, I'm learning.

Someone tell me if I'm wrong in what I'm thinking.

Here are the facts as I understand them.
1 - WA4BDS can decode the station at his house with a high gain antenna - it's at an S9 level with the pre-amp on.
2 - WA4BDS can not decode the station with his D7 at his house.
3 - KE4WFJ can decode the station with his D7 at his house.
4 - K4UAE can decode the station at his house using a high gain antenna it's at an S9+ level.

So far, all of the reports are from people with omni antenna's.

So to begin with, I'm trying to identify location(s) where a transmitter could be located that could result in these reports.

If I begin to draw concentric circles around each of the stations above, each circle further away from the listening station will indicate a reduction in S level; the further away you are, the lower the S level on the receiving station. The thing that I do not know is how big to make each circle. That will depend on the power/HAAT/gain of the transmitter, right?

Aparently there's some calculation that can give an approximate range, but so far, that's giving me three circles that do not intersect.

It appears that I'm missing something. Anyone have a pointer to some discussion on how to do omni df'ing on the web?

I suppose I should provide all the signal reports that I received on my drive around the east, north-east side of Maryville last night.

All of these reports are from a larsen antenna and D700 in my car:
S7 - Alcoa Hwy near John Sevier Hwy
S7 - Alcoa
S8 - downtown Maryville (on Broadway)
S5 - E. Broadway from Washington to Wildwood
S7 - Wildwood Rd
S7 - Nails Creek Rd
S5 - Burnett Station Rd
S3 - Chapman Hwy between Burnett Station & Tipton Station
S4 - Tipton Station
S6 - Martin Mill between Tipton Station and Stock Creek Rd
S9 - in my driveway just off Stock Creek Rd

All of these reports are from my HT with a rubber duck inside my car:
S1 - downtown Maryville
S3 - in my driveway just off Stock Creek Rd

I haven't driven to the west side of Maryville to include any signal reports from that side of town yet. That was my next plan.

Plotting all of this and the other reports that I've seen on a map, I would guess that the transmitter is somewhere in south Knox county.

This is in disagreement with your thought about West Maryville, David.

My logic is we're getting stronger reports from that direction (KE4FGW's Home - S9, KE4WFJ's home - S9, K4UAE's home - S9).

I didn't start listening to 146.250 until after I got on Hwy 129 from south Knoxville while on the cell phone with Roy. It was not full scale there. My first reading was after I was passing by Sevier Heights Baptist church. It was getting better the closer I got to Maryville.

Hmm, ok, I have not heard it at all today.... I have been listening and
not heard anything. Makes me wonder... does the person subsribe to this
list!?? I sure hope not.... I would hate to think that is a ham doing
that. Bu then again who would buy all the equipment needed to do that
just to be a horses rear!!??? Hmm, anyway I'll continue to listen. I
have the equipment ready to go out in the yard as well as mobile
Thunting.... I'll get more info if/when I hear it again by using the
little hand held receiver and yagi/attenuator.

Between David and myself, David is the CLEAR winner for experience in DF'ing. I don't know how much he's done, but I know he's done some and that's more than me. I figured I'd jump in and try to start figuring this one out - that's how I learn thing, just jump right in. I'm glad that there are a number of hams around who are around to bail me out when I get in over my head (which is frequently!).

As far as I know now, the transmissions have stopped. In a way, I'm sad about that, I would like to have got involved in some searching just to learn how to do it. But on the other hand, that repeater sure carries a lot of traffic and a packet burst during a conversation can get annoying.

I've done quite a few fox hunts.

I was involved in hunting down the Winegard antenna oscillating preamp interefence problems that Chattanooga and all over was experiencing back in 2000.

Burried on this website are some of the news articles about the problem back then.

http://www.bext.com/_CGC/2000/postings.htm

FCC Says TV Antennas for RVs Causing Interference
Posted: Feb 13, 2001
The FCC reports "a rash of interference problems created by oscillating pre-amplifiers which are built into Winegard TV reception antennas, used primarily on RV's, campers, and motor homes." The problems generally show up in the 400 - 500 MHz range, and have caused interference to public safety systems, amateurs, and others, at distances of several miles.

According to the FCC, Winegard recognizes the problem, and estimates that there may be as many as 40,000 defective units out there!! The FCC says Winegard has agreed to replace any defective units at no charge. Users should contact the factory in Burlington, Iowa, at (319) 754-0600. This includes RV owners, as well as RV dealers and repair shops which may have new, but defective, units still in stock.

The FCC says Winegard is also planning to send service technicians to larger campgrounds, rallies and dealers around the country, actively looking for defective/radiating units in operation or on the dealer's shelves, and replacing them, again at no charge to the customer, regardless of the age of the unit.

2615. New poll for EastTNAPRS

Yahoo group: EastTNAPRS
Date: 2007-01-11 16:20:41 UTC
From: EastTNAPRS@yahoogroups.com
Topic: 212 Message: 2615

Enter your vote today! A new poll has been created for the
EastTNAPRS group:

Would you like to participate in a fox hunt in the Blount/Sevier/Knox county area?

If yes, what date(s) would work for you?

o No
o Yes - January 20
o Yes - January 27
o Yes - February 3
o Yes - February 10
o Yes - February 17
o Yes - February 24
o Yes - March 3
o Yes - March 10
o Yes - March 17
o Yes - March 24

To vote, please visit the following web page:
http://groups.yahoo.com/group/EastTNAPRS/surveys?id=1765454

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

If there is some interest, I would like to setup a fox-hunt exercise.

Let me know your thoughts - anyone have a rabbit that could be used? I would like something similar to this week's experience - i.e. not extremly low power, at least 5 watts output with infrequent transmissions like a packet burst every 30-60 seconds. Now that I think about it for a bit, any TNC could be used for this type of rabbit.

I'm game. I love fox hunts. I'll even be the fox for this or any future fox hunts we have, if need be. For the first fox hunt though, I'd like to hunt if I can.

I don't have a directional antenna either. I'm thinking about building one of these:
http://home.att.net/~jleggio/projects/rdf/tape_bm.htm
to try - we'll see if I actually get it built.

In addition to that, I would like to try to DF the fox/rabbit using APRS and an "Omni DF" approach first. See here for some details on omni DF'ing:
http://web.ew.usna.edu/~bruninga/dfing.html

I would love to do some more fox hunting...!! It has been a long long
time since I did such. The Chatanooga hamfest used to sponsor a hunt and
give away a brand new hand held as a prize to the winner. I have the
portable yagi (arrow antenna) as well as the attenuator to use also.
Lots of info availabel on the web about T-hunting.. check out the

I just wanted to say, for those of you who do not think you have the right equipment for a fox hunt, all you simply need to get started is an HT. We can show you some methods that you can use with just an HT and still participate in a fox hunt. The beam antenna and attenuator sure do make fox hunting nicer and allot easier. But you can do it with just an HT and some basic techniques to get you started. Once you learn about some of the methods involved, you can perfect your inventory and buy equipment as needed.

http://www.arrowantennas.com/

The two basic items that make fox hunting allot nicer is the beam antenna and an attenuator. The Arrow antenna is a nice portable antenna and is a great tool for fox hunting. It's a little pricy, but you can build you very own beam antenna for fox hunting as well. In fact you can build the attenuator too. But several methods and techniques can be discussed to get you started in fox hunting with just an HT.

I fox hunted before starting out with the mobile Larsen antenna on my car. I've used paper clips too all the time.

2623. Re: New poll for EastTNAPRS

Yahoo group: EastTNAPRS
Date: 2007-01-16 00:24:22 UTC
From: William McKeehan
Topic: 212 Message: 2623

Well, we've only had 3 people respond to the poll. But all 3 have indicated that January 27th will work for them.

In addition to that, I have a volunteer to be the fox/rabbit.

So let's plan a hunt on January 27. If it turns out to be fun and we have more interest, we may schedule another later on.

Questions to be answered:

1. What time do we want to start?
2. What general location (i.e., downtown or out in the woods)?

I'm proposing that we use a cooperative approach to this first hunt (i.e., we all work togather). Does everyone agree with this?

Feel free to promote this outside of this group. If we end up with alot of participants, we may split up into multiple teams.

Thoughts?

I can mention this at the meeting tonight.

I would suggest that we keep the first hunt pretty simple. We can use the first hunt as a teaching lesson and demonstrate some techniques used in fox hunting. We could allow this hunt to build up everyone's skills and to encourage future fox hunts by showing some success on the first one. I would suggest something with almost 100% duty cycle using 3 watts of power or less that would be located up to 10 miles away from the gathering point or starting / meeting point. This way the event wouldn't take all day and can be found rather quickly. I think who ever plants the fox should have his or her choice on the hiding locations. The whole county could be fair game for that matter.

Surface winds are currently forecasted to be on the high side for Saturday....Sunday is forecasted to be much better...however, that could change as we get closer to the end of the week.

Other than high surface winds, there should be almost clear skies but in the 30s.

Flight path is showing a landing site NE of Atlanta along the I-85 corridor...see attached map. Attention Atlanta area Balloonatics - how many of you would be able to track this weekend??

Based on 1300 ft/min ascent...1100 ft/min descent (approx what it was last UAHHC mission):

Ranger, GA - 10 miles east of Calhoun, GA

We've landed there before.

I'll do a final prediction around midnight tonight.

Launch from NSSTC building across from UAH campus ... meet between 8:00 - 8:30 am...inflation at 9:00 am CST....launch shortly thereafter.

Roy and I talked about this at the meeting. A few others were interested as well. Roy and I think that a 10 AM meet to start out somewhere in Blount County would be good. Perhaps we can do lunch somewhere after the fox has been found. We could do some training at the meeting location starting at 10 AM while the fox goes out to hide. I discussed using a power level of less than 5 watts and allowing the fox to go where ever he desires so that only he knows where he is located. I suggested keeping it within 10 miles or so of the meeting location. I think everyone is looking forward to this foxhunt.

The "where" seems to be the only unanswered question. Does anyone else want to come up with any suggestions on where to meet at? I'd suggest the center of Blount County near Maryville somewhere.

2631. [Fwd: SHC Flight 002]

Yahoo group: EastTNAPRS
Date: 2007-01-21 03:56:22 UTC
From: David Hoffman
Topic: 2631 Message: 2631

Looks like they had lots of fun today with their balloon flight. I believe the Tenn chaser they refer to is Don, WA4YYM. Good job Don.

David Hoffman - KE4FGW

---------- Original Message ----------

Preliminary report;

The flight today went great!! We had a great launch, the flight predictions were very accurate and the GPS coordinates from the payload got us right to the landing spot (along with some directions from a Tenn. chaser). The payload ended up about 25 feet up in a very thick pine thicket. Some might even call it a very very thick thicket! With Jason?s rope tricks we had it down in no time.

The launch was at 9:47am. The payload was recovered on the east side of the Chattahoochee Natl. Forest. We got to the site around 12:15 and it was recovered and packed away in the van by 1:00pm. Things went very smooth all day.

Thanks to all the participated!!

2634. Event: Fox Hunt this Saturday

Yahoo group: EastTNAPRS
Date: 2007-01-23 03:36:10 UTC
From: David Hoffman
Topic: 2634 Message: 2634

What: Fox Hunt
When: Saturday, January 27th, at 10 AM
Where: Blount County Public Library
Why: To learn about some techniques used in fox hunting and then go on an actual fox hunt.
The Fox: Well this will be a transmitter located somewhere in Blount County

We will start out by demonstrating some of the techniques used in fox hunting for about 15 to 30 minutes starting at 10 AM at the library. We will then put to use some of what we learned to actually go hunt a fox. We will track and find the fox as a group so that everybody gets to see and learn what to do in the process.

I have a small study room booked that will seat six and/or have standing room for around 10 at the Blount County Library. It will be Study Room B. When you enter the library, go past the check-in desk and turn right. Travel the semi staggering hallway past a line of internet computers and on past the Reference Desk. Just beyond the Reference Desk are some small study rooms. Study Room B is in the middle of three study rooms in a row.

I've updated the data and photos on my website for last December 23rd's HiBall-10 flight....just click on the link for HiBall-10 on the homepage.

I've added a YouTube link with the launch video that was filmed by Gary Dion N4TXI. I think you'll enjoy watching my one-finger liftoff.....only 10 oz of positive lift.

2636. STRAWBERRY PLAINS HALF-MARATHON

Yahoo group: EastTNAPRS
Date: 2007-01-23 19:08:45 UTC
From: William McKeehan
Topic: 2636 Message: 2636

I've mentioned this event on the Sunday Night nets a couple of times, but I don't think I've mentioned it on this list.

The METERS organization will be providing communications support for the Strawberry Plains Half-Marathon. The event will be on February 17, 2007. This will be a perfect opportunity to use APRS in a Public Service Event.

Anyone interested in helping out?

2641. Fox Hunt

Yahoo group: EastTNAPRS
Date: 2007-01-28 02:37:30 UTC
From: William McKeehan
Topic: 2641 Message: 2641

Well Guys, today's fox hunt was a great success!

We had a total of 7 people to participate in the chase plus the fox.

WA4BDS - Roy (Fox)
KE4FGW - David (primary instructor)
KE4WFJ - Tom (experienced DFer)
K4TJY - Ron (experienced DFer)
KI4GBV - Jon
WB4E - Hal
- Emily (right name?) Hal's daughter.
KI4HDU - William

Three in the group were experienced DFers and had specialized equipment.

We spent about 45 minutes at the library discussing techniques that could be used to DF with just an HT as well as some of the other specialized equipment used in DFing. They had examples of an Arrow beam antenna, a VHF Loop (this turned out to be a very nice tool to fine tune the initial direction from the beam), Attenuators and pre-amps. All-in-all, a very good primer in DFing.

After that, we took to the parking lot to get a reading on the fox. Yes, a group of 7 people with strange antenna's and radio's in the parking lot will draw some attention :-).

This time, we were cooperative in the search, traveling basically in a pack and helping each other figure out where the fox was. As we got closer, we split up to zero in on the fox. A new fox hunter (Jon, KI4GBV) was the first to find the fox. Everyone else followed shortly behind that...except for ME - I was the last one to find him. I had it narrowed down to about a 1/2 mile radius around the fox, but without anything other than my HT I could not get any closer without a visual on the fox. Thankfully the guys gave me a hint and helped me in (really, I think they just got tired of waiting one me!).

Counting the time we spent stopped to compare readings among the various participants and the time we spent in the parking lot at the library in the beginning it took about 90 minutes to find the fox.

I had a great time and I think everyone else did as well.

Anyone interested doing another hunt in March?

2644. Kantronics KPC3+ 128k for sale with Icom interface cable. $125

Yahoo group: EastTNAPRS
Date: 2007-01-28 13:39:11 UTC
From: John
Topic: 2569 Message: 2644

Hello all this is John... K4UAE and I have for sale my second Kantronics KPC3+ TNC with an interface cable made for Icom RJ-45 radios. I used this setup both here in the shack with an Icom IC-2720, and mobile with two radios (Icom IC-2100H, and IC-207H) Works great!!! Will sell all including a CD with manual on it for $125. The firmware on the TNC is v8.3 to all those interested. I'll even throw in a Serial cable if needed. E-mail me with any other questions etc...

Thanks
73 de K4UAE

One thing that was discussed briefly was using APRS in DFing.

As far as I know, there are two programs that support this: APRSDos and Xastir.

For a couple of screenshots to see Xastir doing this, see:
http://www.eskimo.com/~archer/xastir/SAR.html

Scroll down to the section called "Direction Finding".

I think on the next hunt I'll bring the truck and laptop so I can try this.

Just one of the many reasons that I like Xastir.

2646. New poll for EastTNAPRS

Yahoo group: EastTNAPRS
Date: 2007-01-28 15:14:03 UTC
From: EastTNAPRS@yahoogroups.com
Topic: 212 Message: 2646

Enter your vote today! A new poll has been created for the
EastTNAPRS group:

Select a date for the next fox hunt in the Blount/Sevier/Knox county area.
For the Saturday dates, the start time would be around 10:00AM.
For the Sunday dates, the start time would be around 1:30 PM.

o Saturday, March 3
o Sunday, March 4
o Saturday, March 10
o Sunday, March 11
o Saturday, March 17
o Sunday, March 18
o Saturday, March 24
o Sunday, March 25
o Saturday, March 31

To vote, please visit the following web page:
http://groups.yahoo.com/group/EastTNAPRS/surveys?id=1776524

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

Ron, I was certainly happy to see you there! You had some interesting gadgets to show us and your DFing was right on the money!

Anyone know of any Hamfests, public service or club events in March? I'd like to schedule another hunt sometime in March and would like to avoid conflicts as much as possible.

Most all equipment I used was from http://www.arrowantenna.com

75db fox hunt attenuator
4mhz offset attenuator (for real close in work)
vhf loop antenna (uhf available)
3-element handheld beam

I changed the poll today to allow multiple answers. So pick dates
that you are available and we'll try to take the most popular.

------------------------------------------------------------------------------

Well, it is now up and running on White Oak, 8 miles NW of Cleveland.

It is hearing stations as far away as 90 miles direct, and is hearing most
digi's that far away.

Hope W4KCO-3 can be of good use. Keith has put a good amount of money in it,
and has the support of Cleveland area amateurs.

From: William McKeehan
Topic: 3 Message: 2655

I would like to see the feedback on the recommendations that I have placed in this file.

If you disagree (I imagine that there should be some disagreement), please tell me what you would recommend and why so we can discuss it on this group.

Once we all agree on the recommendations (or have some concensus), I'll start distributing it to everyone that joins this group.

They are using the same trackers and probably the same setup parameters
that are used for the America's Challenge race. They do not report
altitudes during that race by rule. I'm thinking they just gave this
balloon one of those trackers without reconfiguring it. N5GAS and K5GAS
are the calls for the Albuquerque Gas Ballooning Assoc. This flight should
make the Carolina coast by tomorrow evening if they can keep their
altitude around 15,000' or higher. Lower and they'll turn more northeast
towards the Great Lakes. 73 de Mark N9XTN

2659. FIRST GAS BALLOON RECORD ATTEMPT

Yahoo group: EastTNAPRS
Date: 2007-01-31 18:43:08 UTC
From: David Hoffman
Topic: 2659 Message: 2659

Looks like they had to land: http://www.savannahsix.com/

FIRST GAS BALLOON RECORD ATTEMPT
January 2007

From Danni Suskin, 9:18 p.m. EST, 30 January:
I have spoken with Andy. He is at 12000 ft, 3 bags ballast left. He will land first light - he is estimating near Enid, OK - that's about 50 miles north of Oklahoma City. Retrieval is arranged - I have spoken with Mark in Oklahoma City - his trailer is ready, they have food and dry clothing for them and are ready and eager to go. He will retrieve them and the equipment no matter where they are. The equipment with stay in OK, they will fly home. They sound a little bummed, but ok.

From Don Day, 30 January, 9:00 p.m. EST:
Just got a call from Danni, who just spoke with Andy. They are down to 3 bags of ballast and cannot keep the balloon at the altitude needed for the record tonight, so Andy has decided to land in the morning, I am working a trajectory for Danni so he can find someone and get them in place tomorrow A.M. Will send that traj on soon. Too bad, but it has been a heck of a ride!

Projected track for Wednesday morning 31 January

From Don Day, 1705 mst, 30 January
Just talked to Andy. Flying at 14,800ft., heading 95, 44 mph. All is well. 6 bags of ballast left, but little else to throw out ballast wise (they will be a little hungry the rest of the way). Andy and Sam crossed the CO high country in spectacular fashion! Flying just below 18K, Andy and Sam endured -10 to -15F temperatures as well as snow flurries as they flew above some of Colorado's tallest peaks (some over 14K). They reached speeds of nearly 60 mph. They did encounter some bad rotor action on the east side of the Sangre De Cristo mountains (last major mountain range) but where able to ballast out (ie, dinner and breakfast) of it. Troy Bradley was able to observe Andy and Sam passing just east of I-25 between Walsenburg and Colorado City, CO. New trajectories continue to show promise. If they can maintain high altitude through tonight and on Wednesday, they have a decent chance at the record! Speeds tonight will be between 35 and 45 mph. At the moment, I am not expecting any significant weather problems overnight or tomorrow and there are no mountains to fly over for until the Smokeys. Thanks to Tim, Danni, John, Bert and Troy in getting everyone ready for Andy/Sam's flight over the mountains.

2660. Net Announcements

Yahoo group: EastTNAPRS
Date: 2007-02-01 22:13:28 UTC
From: William McKeehan
Topic: 305 Message: 2660

I am planning to start sending out APRS notices for local voice nets.

Here's the current list of things that I have:
http://mckeehan.homeip.net/javaprs/announcements.php

You should seee the SMARC Net and the Blount County ECS ARES Net
announcements tonight.

The formats may seem a little strange, but it is designed to let the
basic information be seen on a TH-D7 or TM-D700 so this information
is available to the mobile user.

If you have other nets to include in this list, please send them my
way.

I need the name, frequency, day of the week, start time, approximate
Latitude/Longitude for the net (not necessarily the repeater).

Also have a look at the packets that go out tonight and provide any
feedback you may have about how I've got things setup. Notices should
go out every 10 minutes for an hour before the event and thirty
minutes after it starts.

Thanks!

Hi William,

The repeater is close the W4ACA digi but if you want to put it over
the Clinton Area that would be a good location to be seen or Oak Ridge
would be fine....

The regular freq is 146.880 but it took a lighting hit lst year and is
still DOA at the moment so we use the back of....

As a matter of introducing myself, I am KE4IDH. I am participating with Hamilton County ARES as their training coordinator.
I actually live in the southwest corner of Bradley County. I also have an interest in APRS for tracking at events. One interest is related to emergency communications/disaster/incident response and how ARPS as well as general packet can be used for that purpose.

I have a receive only set up using WinAPRS and AGWPE software. As soon as I get my interface built for keying the transmitter (and deciding which radio I want to use) and learn a bit more about what I am dong, I will set up the transmitter portion.

I work at Erlanger, so I have an I interest in encouraging hospitals that purchased amateur equipment with Homeland Security money to have a group of amateurs who can occasionally exercise that equipment.

What would you recommend as a good central location for the icon to appear for this net? Seymour?

I knew about this net, but did not add it to the list because of that and I did not know if that repeater has a tone or not.

Hello Dewayne, welcome to the group. I used to live in Chattanooga years ago. Back then, I'd tried several times to encourage the group to use APRS in many events. There were several who got APRS running but we never did anything with it. Good luck on using APRS in such events. I bet the interest has changed.

I now live in Blount County. With William's help, the moderator of this group, we've seen quite a bit of APRS activity in this area. In fact, we've been using APRS in many public service events lately. It has become a great tool on several occasions for several events involing bicycles as well as foot races.

Welcome to the group. I hope you get allot out of it. It's a great place to ask just about anything related to APRS and ham radio.

2670. Pin outs?

Yahoo group: EastTNAPRS
Date: 2007-02-04 04:15:37 UTC
From: John Dollar
Topic: 2670 Message: 2670

Anyone have the pin outs for an Icom V800? I am connecting it to an Open tracker and I am lost at the mic end. The tracker side is easy enough, kpc3 type. Just dont know what wire does what on the radio end.

Thanks for any input and info!

Regards,
John

Hey,
Can we get this posted on the yahoo website when
finished? I liked the format.
Also, when i pasted it into Excel, moused over the time, the
time was shown as
9:00 PM, etc... cool! William, this was great!

It will probably continue to live at the URL below. The table is built dynamically from the database that I'm using to generate the objects, so if it's there, it will go out on the air.

2676. Poll results for EastTNAPRS

Yahoo group: EastTNAPRS
Date: 2007-02-10 08:23:45 UTC
From: EastTNAPRS@yahoogroups.com
Topic: 254 Message: 2676

The following EastTNAPRS poll is now closed. Here are the
final results:

POLL QUESTION: Select a date for the next fox hunt in the Blount/Sevier/Knox county area.
For the Saturday dates, the start time would be around 10:00AM.
For the Sunday dates, the start time would be around 1:30 PM.

CHOICES AND RESULTS
- Saturday, March 3, 1 votes, 5.26%
- Sunday, March 4, 3 votes, 15.79%
- Saturday, March 10, 1 votes, 5.26%
- Sunday, March 11, 3 votes, 15.79%
- Saturday, March 17, 1 votes, 5.26%
- Sunday, March 18, 3 votes, 15.79%
- Saturday, March 24, 2 votes, 10.53%
- Sunday, March 25, 3 votes, 15.79%
- Saturday, March 31, 2 votes, 10.53%

2677. Google Maps

Yahoo group: EastTNAPRS
Date: 2007-02-13 21:19:31 UTC
From: William McKeehan
Topic: 2677 Message: 2677

I've been playing over the past while (a month or more) with google maps. I finally have something that's approaching usable for me.

Have a look:

http://mckeehan.homeip.net/aprs/aprsmap.php

It shows the stations that I have heard at my IGate over the past hour and their "track" over the past two hours.

Clicking on one of the stations will open a window that shows details of their most recent packet.

I also have a station list that just lists each of these stations.

This is very much still a work in progress...let me know what you think about it.

You are correct, I'm using the DB feature of javaprssrvr to populate a table, then using PHP or Perl to query and format the data and HTML/Javascript to display the data.

I will happily provide the code; you can get it here:
http://mckeehan.homeip.net/aprs/aprs_googlemap.tar.gz

If you don't see any stations on the map, give it a minute or so and make sure you allow JavaScript to execute on this page.

2686. Moving to Kansas City

Yahoo group: EastTNAPRS
Date: 2007-02-21 22:45:19 UTC
From: Travis J. Maclay
Topic: 2686 Message: 2686

Hey guys,

This has been in the works for quite some time, but it's now official and wanted to share it with you guys.

Mandy (my wife) and I will be moving to Overland Park, KS (suburb of Kansas City) next week to join the staff of First Family Church. I will serve there as the Minister of Media - a similar role to what I do at Sevier Heights here in Knoxville.

I've enjoyed learning, experimenting, APRS'ing, launching and recovering balloons with each of you. Wish I could have been more active in recent months, but it's been rather busy. We've enjoyed the friendships we've made with many of you and look forward to seeing what the future holds.

I wish each of you the very best.

Blessings!
Travis Maclay

David and the group,

Thanks for the email. I am a bit embarrassed that it has taken me so long to respond. Things have been a bit busier than usual the last few weeks.

Our local ARES group is interested in APRS for events as well any other useful purposes. As we further develop our ideas, plans and pull together equipment I am sure that we will be looking for more input.

Hello Dewayne, welcome to the group. I used to live in Chattanooga years ago. Back then, I'd tried several times to encourage the group to use APRS in many events. There were several who got APRS running but we never did anything with it. Good luck on using APRS in such events. I bet the interest has changed.

I now live in Blount County. With William's help, the moderator of this group, we've seen quite a bit of APRS activity in this area. In fact, we've been using APRS in many public service events lately. It has become a great tool on several occasions for several events involing bicycles as well as foot races.

Welcome to the group. I hope you get allot out of it. It's a great place to ask just about anything related to APRS and ham radio.

No problem Dewayne. I've been kind of busy lately myself.

You'll have to tell everybody down there Hello from me. Dewey, Shawn, and all the Charlies, especially Charles Goodner. I saw Boots about a month ago, tell him I said Hi. Say Hello to AD4F for me too.

We'll be happy to answer whatever comes up as you explore APRS. We have a great croud in here.

2693. Fox Hunt: Sunday, March 18 at 2 PM

Yahoo group: EastTNAPRS
Date: 2007-03-07 03:22:00 UTC
From: William McKeehan
Topic: 2693 Message: 2693

Well guys, it's a little later than I wanted to get the word out, but let's have a fox hunt!

We will have it on Sunday, March 18 starting at 2 PM. We will meet at the library in Blount County (N35 45.4512, W083 58.3786; if you need directions, shout on here and we'll share).

David, KE4FGW, is checking on a room for us in the library in case we want to go in and have a bit of discussion - we did that last time, covering some of the basic equipment needed, etc., so depending on who all shows up, we may do it again.

Once again Roy, WA4BDS, has volunteered to be the fox. The fox will be on 2 meters to allow people that only have a 2 meter HT to participate, other than that, we have not worked out the details of the fox. It will probably be within 10 miles of our starting location, but that's about all that's known at this point. Suggestions for the fox are welcome.

All it takes to participate is an HT, so if you're free that afternoon, come join us for some searching good fun. (And don't worry about being the last person to find the fox - remember I'll be there, so you've got a good chance at not being last!).

We are considering dividing up into teams to make this a bit of a competition. Depending on how many people show-up. Other ideas for how to keep this interesting are welcome.

If you have the equipment, the following would be great to have:
area map
compass
hand-held beam antenna
loop antenna
attenuator
a paper-clip
some aluminum foil
Chime in here you experienced folks and help round-out this list.

Other suggestions/questions?

William
KI4HDU

Topic: 2693 Message: 2695

How a clear plastic overlay for your map. A grease pencil to plot your bearings on the overlay. And a protractor to accurately draw those lines. Maybe a clipboard to keep the map and overlay together as one unit. A GPS is real handy. An off band radio to communicate with the group (fox will be on 2m - hounds on 440). The 440 will also be useful for close in work using the third harmonic of the 2m frequency. HAPPY HUNTING!!!

Ron Russell - K4TJY

Subject: The Oak Ridge 88 machine

Good Afternoon. It is a beautiful day in Oak Ridge. The 146.880 machine located near Cross Mtn at Lake City is back on the air. This I believe is the first and only solar powered machine in Tennessee. We have listened to Al Gore and gone Green Power. I really think we did it because we could not afford to take over maintaince on the power lines. However, It is owned by the Oak Ridge Amateur Radio Club. It may or may not be toned at 88.5. Let's see if we can wear it out after it's long down time.
There is an ARES net each Monday night at 7:00pm local time. Everyone welcome to check in.

Love one another. In the same way I loved you, you love one another. John 13:34 Jesus' last commandment

Here are a couple of others that Ron, K4TJY, found

http://www.handi-finder.com/
http://www.marshwildman.com/handy.htm

Looks like a pretty simple device to build and inexpensive.

After David asked the question, I went to the home page and looked. I did not see the link either. After seeing this note, I checked again and found it; it's in the "Latest Website News" section which scrolls, as I scrolled down past that box, the news about the pictures was not in the box, so I missed it.

Thanks for the direct link!

2709. DFing with Xastir

Yahoo group: EastTNAPRS
Date: 2007-03-19 01:13:52 UTC
From: William McKeehan
Topic: 2709 Message: 2709

I used Xastir in the fox hunt today. Some of you may notice my "DF objects", first, second, third and fourth.

To give you an idea of how these are used, have a look at the pictures I added to the Photo's section of this group; one shows a long distance view, the other closer to the fox (WA4BDS is the fox).

I enter a location (or click on the map), and bearing, it draws the lines for me (I tell it how wide in degrees to draw the lines).

It worked pretty well except that the "fourth" report was an error. I'm not sure if there was a reflected signal that was DF'd or what happened, but in general, it worked and having Xastir draw the map made my life easy.

More on the fox hunt in a bit.

I spotted, in the pictures of the 710, a small jack like the GPS jack on the 700, located on the side of the face plate. I don't like that move. That means that there will two cable to the face plate now, instead of one, if you are using a GPS. This was my only observation so far that I saw when I read this article this monring.

I would like that move, if they provide power out for the GPS as well.
Generally the GPS unit sits near the radio head, so that would reduce the
cable length/mess for me...

I personally would like to see the GPS built inside the radio as an option. I'd like to have an external GPS hooked up only for those times when I want to see the GPS like on events etc. But otherwise, use an internal GPS with the antenna going into the main unit. From the looks of that little jack, it looks just like the 3 conductor one that we have now on the 700. That's a bad spot for the GPS plug, on the left side of the remote head unit. Looks like I'll have to modify this radio as well to fit my needs.

I would REALLY like to see a version of the TH-D7 HT with a built-in GPS. That's not as important in the D700 because I like having the GPS where I can see it.

Atleast with the GPS in the head unit, it may be as simple as splitting the cable that feeds the head and getting the GPS input at the radio.

i don't know if having the gps in the portable rig would be such a good idea as my eagle is a power hog. it goes through a set of 4 double a's in 4 hours. it 's got a few years on it and is a rather bulky, older technology hand held unit. however, all new cell phones all have gps built in since 2006. so maybe the newer stuff is power less hungry? anyway, i disabled my cell's gps to extend battery life, unless i use it for a 911 call. the eagle's cord can also carry 5v power from the tnc to power the GPS as well as the carry the serial output from the GPS to the TNC. it uses one cord for both. i've never had much problem with my kenwood th22at, the kpc-3, and the eagle in a small engineer's bag when hiking or on the bike. if you have an external gps unit, you can have all the advantages of your speed, location, altitude, maps, etc. as well as output to your rig.
the TAPR.org website used to have some very small gps projects. i mean tiny. some projects such as the MIC-E microphone had a tiny PIC tnc board you could put into your mobile rig's mic, sending a packet location burst when you keyed up. it seemed several years ago that there was some hams that were also into law enforcement that had use for very tiny "trackers". we now know that they are in common use today thanks to amateur radio tinkerers. TAPR has lots of shareware, and the latest versions of APRS for those of you that aren't aware of the site. TAPR also has several special interest groups (SIG) for different uses of APRS. so, maybe with the new tiny micro technology the gps could be used in the ht's without being such power hogs? that site might be a good place to place your idea as a Christmas APRS wish list for Bob B., wb4apr. he reads those APRS SIG posts and has input into what kenwood does with their tncs' configuration. he used one of my ideas in the APRS dos version. i told him i used a beam antenna and would like to see azmuth and distance to a station when i clicked on it. he put it in there. some of the other stuff i wanted turned out to be already in there. i just could find it. most of what we see in APRS today has been a suggestion from someone in the past on the TAPR APRS SIG. the problems and improvements were hashed out there. at one time he used to change APRS versions every week or two to make improvements and remove bugs. you might put a post on there and see if someone can find you a micro GPS unit that can fit into your rig? also, you might want to check with tmd 700/710 owners to see what level signal is required for the rig to decode properly with it's tnc. beware, the last time i was on the SIG i was getting 200 plus messages a day via email!

---------- Original Message ----------
Subject: [UTARC Chat] Meeting tonight & Icarus One Flight Date
From: "Dan Bowen" <dbowen1@...>
Date: Tue, March 20, 2007 10:20 am

Icarus One will fly on the evening of Saturday, March 30, 2004, to be the first Zero Pressure UTARC balloon flight. This flight will be designed to float at around 28,000 ft for an indeterminate amount of time. Due to it's design purpose of being lightweight and long-duration test of the balloon envelope, the payload will only carry a CW/RTTY HF transmitter on 20m, similar to the HF transmitter on UX-9. This flight will contain solar cells to augment the power of the onboard batteries when the balloon reaches daylight.

We have recently made two important breakthroughs that will enable us to attempt transatlantic flights. One is the development of a simple, yet strong and reliable method for heat-sealing (joining) polyethylene plastic sheeting, and the other is the demonstration of version 2 the Distributed Tracking and Relay Client. Icarus One will fly with a 3-chamber zero-pressure balloon, to be built by you, UTARC members!

We will need HF volunteers along the eastern US to run the UTARC DTRC software which will automatically capture and forward our RTTY telemetry to us. Please get the word out, it will be available for download from http://balloon.utarc.org next week.

More details to follow, as well as web page updates.
Thanks,
Dan Bowen

2717. Fwd: UTARC UX-10 Launch Press Release

Yahoo group: EastTNAPRS
Date: 2007-03-23 15:33:08 UTC
From: William McKeehan
Topic: 2717 Message: 2717

UTARC UX-10 Launch Saturday Night, March 31, 2007

Who: The University of Tennessee Amateur Radio Club (UTARC)
What: High Altitude Balloon Launch
When: Saturday night, March 31, 2007
Where: Launch from Island Home Airport, Knoxville, Tennessee USA
Why: Test flight of onboard software and hardware enhancements and beta test of downlink software for receiving stations on the East Coast of the United States. Preparation for future trans-oceanic attempt.
Contact: Dan Bowen, K2VOL - dbowen1(at)mac.com

QST:

The University of Tennessee Amateur Radio Club (UTARC) will be launching a high-altitude weather balloon on the evening of March 31, 2007. Time TBA. The codename of this flight will be called "Project Icarus".

UTARC will launch from the Island Home Airport (KDKX) with the following specifications:
* Zero pressure balloon
* 14.060 MHz RTTY transmitter (45.45 baud)
* Solar panel
* GPS
* Measurements of temperature, current, and voltage

Not only will this be the first flight using zero pressure balloons, it will also utilize software that listeners across North America can download onto their computer and monitor the flight as it goes overnight across the Eastern United States.

We appeal to adventurous hams and shortwave listeners in the radio community to join our project as remote stations for Mission Control. Many HF operators and listeners will already have the appropriate station equipment setup: an internet connection and HF digital modes capability. Locations across North America east of the Mississippi would be most appreciated, but any station that might be interested in trying to receive the signal are welcome. We will provide special software that will link your radios to the UTARC Mission Control Server, allowing UTARC to receive telemetry as it goes out of range of the East Tennessee area to parts unknown.

This software is called the Distributed Tracking and Relay Client, or DTRC. It is designed to allow you to help the UTARC Balloon program by becoming a remote telemetry receiver for balloon flights, connecting your radio to UTARC through the internet. The DTRC is a RTTY decoder program that automatically forwards received data to UTARC. The software will be made available the week before launch.

If you wish to assist UTARC and would like to try using the DTRC software, please send an email to dtrc (at) utarc.org. Once the software is released for download, users will be notified via email.

For more information on this flight and to check for the latest updates on the balloon launch, please visit the UTARC web site at http://balloon.utarc.org.

2720. Knoxville Marathon APRS challenge

Yahoo group: EastTNAPRS
Date: 2007-03-27 02:23:48 UTC
From: William McKeehan
Topic: 2720 Message: 2720

We have had many events where we used the position reporting portion of APRS to track lead/tail and SAG vehicles; we use APRS messaging daily to exchange information and just to chat.

The APRS system was designed to support rapid, reliable exchange of information for local, tactical, real-time events or nets. Having more people that are APRS capable increases the value of APRS - it's not very valuable if you can only use it to communicate with a few people; you need to get information out to everyone rapidly; for many cases, APRS is the perfect tool for this job.

All of that leads me to this....

Once again, APRS will be used during the Knoxville Marathon (at the request of the served agency, I may add). It will only be of limited use because most of the volunteers are not APRS capable; we only have 3 volunteers that are APRS users - all of which will be using APRS during the event. (BTW, I would love to see more of you guys active in these type of Public Service Events, there will be several more opportunities through the year.)

One improvement over last year is that NCS wants to have APRS at their station this year; that will bring information to their finger tips that they did not have last year. I was very happy to learn that NCS wanted this capability.

But what I really want is see our local use of APRS expand beyond simple position reporting.

There is one area where I would really like to see APRS used for the marathon. APRS would be ideal for reporting the bib numbers of runners registered for the full marathon who give it up at the 1/2 way point. For this year, this information will be transmitted via voice - it will be enough traffic that it will probably be passed on a second frequency. Using APRS would allow this information to be provided error-free without congesting the voice frequencies while letting the NCS accept the information when they are ready for it.

This would require an APRS operator with the ability to operate "portable" and send the bib numbers via APRS messages to NCS and/or the finish line APRS station. It would probably require a portable computer/tnc/radio setup that could run for several hours (6AM - 1PM) without external power (got a generator?). If you are interested in this, let me know.

This type of creative use of APRS could draw more people into APRS and make it more valuable for future events.

2721. Sunday Night Net

Yahoo group: EastTNAPRS
Date: 2007-03-27 02:35:05 UTC
From: William McKeehan
Topic: 348 Message: 2721

Well guys, once again, things on this list and the Sunday night net is slowing down.

Over the last hour, I have heard 65 stations/objects via RF at my home location. Needless to say, the amount of APRS traffic has grown dramatically over the last couple of years that this group and net have been in existence. I think this group and the net are having the effect that I wanted them to have.

There are 82 members in this group. The files and links sections have a vast amount of information. At this point, if you want to get and APRS station up and going, this group should have more than enough information to get you headed in the right direction.

I hope to see things pick back up as spring gets underway and people settle into their summer schedule.

Feel free to invite others to join the group.

Feel free to ask questions here or on the voice net.

Feel free to post to this net about things that you are doing with APRS.

Feel free to use this group to announce events where you will be using APRS.

And please, check into the net when you can. There are people our there that listen to the net, giving them something to listen to will build their excitement and get them involved in APRS.

Check into the net via APRS as well as via voice; I like to hear from APRS stations and this gives you the chance to test your APRS equipment and tests my ability to get a response message back to you.

Watch the event Sunday and tell me what you saw on the net Sunday night.

2723. new set up not working

Yahoo group: EastTNAPRS
Date: 2007-03-28 12:58:34 UTC
From: Jay
Topic: 2723 Message: 2723

Hi everyone,
I have used a scanner to recieve and internet to send for about a year.
this week I bought a radio, Icom v-8000, and a sound card interface,
Mfj-1279m. After hooking everything up I cant get computer to key the
radio I have double checked hook ups and I am sure it must be in my
computer set up or UI veiw set up but I cant figure it out. Any help
would be greatly apr.

Does your receive work with this new setup?

When you transmit a packet with UI-View, does the transmit light on the front of the MFJ-1279M come on?

2727. Re: [EastTNAPRS] new set up not working

Yahoo group: EastTNAPRS
Date: 2007-03-28 17:46:38 UTC
From: William McKeehan
Topic: 2723 Message: 2727

I have had a very different experience with the sound card stuff. I run a couple now and they both seem to perform at least as well (if not better) than the TNC's I've played with.

Adjusting the soundcard took a bit of time, but once I got those settings figured out, it's worked like a champ.

Question #1
As for using "packet" mode, I don't see that the IC-V8000 has a special connector for packet, so I suspect that the connection between the MFJ-1279M and the radio uses the microphone jack (thus the Modular version of the 1279). And the radio only does FM, so there should be no adjustment necessary there.

Question #2
Always a good thing to check, even on factory supplied cables. I've received cables from the factory that did not work before.

Question #3
Again, a good thing to look at.

I look forward to hearing Jay's input.

2728. Re: [EastTNAPRS] D700 Emergency function and Ui-View.

Yahoo group: EastTNAPRS
Date: 2007-03-28 18:05:48 UTC
From: William McKeehan
Topic: 2724 Message: 2728

One great website to start looking for answers to questions like this is the APRS Capabilities overview site:
http://www.eskimo.com/~archer/aprs_capabilities.html

Looking at that list, it looks like only see Kenwood radio's (TH-D7 and TM-D700), APRS Dos and Xastir will respond to Mic-E Emergency packets. In addition, APRS+SA and Xastir will respond to the word "EMERGENCY" in someone's status text (well, specifically, the words ?ALARM?, ?ALERT?, ?WARNING?, ?WXALARM?, ?EM? in the TO: field, or ?EMERGENCY? anywhere in the line).

I can tell you from personal experience how Xastir respond; it pops-up a dialog box showing the station's emergency beacon, their direction/distance from my station and their status text. I then have the option of clicking a button to zoom in on that station.

Not APRS, but tracking with a digital signal over RF none the less...
--
William McKeehan

The Distributed Tracking and Relay Client is ready for public download, thanks to Mike Coffey, KJ4Z's hard work. The DTRC will allow you to decode the Radio Teletype (RTTY) signal from our balloon missions and automatically relay the received text back to UTARC. Forward this email and news to any hams interested please!

Our next mission is on Saturday March 31, 2007 at 10PM. Please monitor the mission and mission status pages on launch eve and during flight.
http://www.utarc.org/wiki/index.php/Icarus_II
http://www.utarc.org/wiki/index.php/Icarus_II_Status

Get DTRC at:
http://www.utarc.org/wiki/index.php/DTRC

**Beta Testers: Please delete any old DTRC folders and replace them with this new folder.

Thanks Everyone!
Dan Bowen

2735. Re: new set up not working

Yahoo group: EastTNAPRS
Date: 2007-03-28 22:09:36 UTC
From: Jay
Topic: 2723 Message: 2735

Ok lets see if I can
answer all of this first off the receive works great. I use AGW
packet engine ver. 2005.127 U I view ver 2.03. in comms setup
hostmode=AGWPE that blocks all other settings on this screen. in
station setup I have unproto port = 1 and unproto address =
aprs,wide. the sound card interface passes data to and from the
interface and computer via3.5 mm stereo jacks to sound card audio out
and line in ports. It connects to the radio via a mod plug to radios
mic plug in.A rs 232 cable connects from a serial port on the
computer to the interface , I think this is used to key the radio.
NOTE: I dont know how to check this serial port for activation or
operation. Im using a older but very stable Gateway computer running
Windows ME. OK here it gets sticky I dont know if I can explain this
but here goes;;; inside the interface there are three leds with three
jumper block with three pins each. the manuel says to send info from
your computer in the program you use and one of these lights will
blink then you install a jumper accordind to if you want that info to
go to the radio or the cw jack on the back. two of these leds are
lit constantly. HELP PLEASE
ki4mzg

2743. Re: new set up not working

Yahoo group: EastTNAPRS
Date: 2007-03-28 22:09:36 UTC
From: Jay
Topic: 2723 Message: 2743

Ok lets see if I can
answer all of this first off the receive works great. I use AGW
packet engine ver. 2005.127 U I view ver 2.03. in comms setup
hostmode=AGWPE that blocks all other settings on this screen. in
station setup I have unproto port = 1 and unproto address =
aprs,wide. the sound card interface passes data to and from the
interface and computer via3.5 mm stereo jacks to sound card audio out
and line in ports. It connects to the radio via a mod plug to radios
mic plug in.A rs 232 cable connects from a serial port on the
computer to the interface , I think this is used to key the radio.
NOTE: I dont know how to check this serial port for activation or
operation. Im using a older but very stable Gateway computer running
Windows ME. OK here it gets sticky I dont know if I can explain this
but here goes;;; inside the interface there are three leds with three
jumper block with three pins each. the manuel says to send info from
your computer in the program you use and one of these lights will
blink then you install a jumper accordind to if you want that info to
go to the radio or the cw jack on the back. two of these leds are
lit constantly. HELP PLEASE
ki4mzg

2753. Re: new set up not working

Yahoo group: EastTNAPRS
Date: 2007-03-28 22:09:36 UTC
From: Jay
Topic: 2723 Message: 2753

Ok lets see if I can
answer all of this first off the receive works great. I use AGW
packet engine ver. 2005.127 U I view ver 2.03. in comms setup
hostmode=AGWPE that blocks all other settings on this screen. in
station setup I have unproto port = 1 and unproto address =
aprs,wide. the sound card interface passes data to and from the
interface and computer via3.5 mm stereo jacks to sound card audio out
and line in ports. It connects to the radio via a mod plug to radios
mic plug in.A rs 232 cable connects from a serial port on the
computer to the interface , I think this is used to key the radio.
NOTE: I dont know how to check this serial port for activation or
operation. Im using a older but very stable Gateway computer running
Windows ME. OK here it gets sticky I dont know if I can explain this
but here goes;;; inside the interface there are three leds with three
jumper block with three pins each. the manuel says to send info from
your computer in the program you use and one of these lights will
blink then you install a jumper accordind to if you want that info to
go to the radio or the cw jack on the back. two of these leds are
lit constantly. HELP PLEASE
ki4mzg

From: Bob Thomas
Topic: 2724 Message: 2768

In my humble opinion, sending an emergency beacon is like sending SOS and we all know that is taboo unless there really is a serious emergency. some here may disagree, but i won't send it out unless it's needed. i received one of these several years ago on my dos aprs screen. some here may remember it as well. the screen turned red, then the computer started beeping like it was in death mode. it turned out that a very prominant aprs guru from atlanta was in gatlinburg trying out his emergency beacon on low power with his thd-7. i was only a step away from contacting authorities with his location when i made contact with him. his beacon was picked up in the local network, then made it's way here to flag pond. for some reason, he wasn't happy with my proper response to his emergency beacon. i agree to being very careful, but i would never try to test it on any frequency, unless it was an actual emergency. i wonder what would happen if this went through via internet links? as far as subscribing to other aprs sigs goes, be careful. i didn't like 200+ emails a day from the one i used in the tapr group. thanks for the link below.

bob, ks4ng

Subject: Re: [EastTNAPRS] D700 Emergency function and Ui-View.

One great website to start looking for answers to questions like this is the
APRS Capabilities overview site:
http://www.eskimo.com/~archer/aprs_capabilities.html

Looking at that list, it looks like only see Kenwood radio's (TH-D7 and
TM-D700), APRS Dos and Xastir will respond to Mic-E Emergency packets. In
addition, APRS+SA and Xastir will respond to the word "EMERGENCY" in someone's
status text (well, specifically, the words "ALARM", "ALERT", "WARNING",
"WXALARM", "EM" in the TO: field, or "EMERGENCY" anywhere in the line).

I can tell you from personal experience how Xastir respond; it pops-up a
dialog box showing the station's emergency beacon, their direction/distance
from my station and their status text. I then have the option of clicking a
button to zoom in on that station.

2772. Re: new set up not working

Yahoo group: EastTNAPRS
Date: 2007-03-28 22:09:36 UTC
From: Jay
Topic: 2723 Message: 2772

Ok lets see if I can
answer all of this first off the receive works great. I use AGW
packet engine ver. 2005.127 U I view ver 2.03. in comms setup
hostmode=AGWPE that blocks all other settings on this screen. in
station setup I have unproto port = 1 and unproto address =
aprs,wide. the sound card interface passes data to and from the
interface and computer via3.5 mm stereo jacks to sound card audio out
and line in ports. It connects to the radio via a mod plug to radios
mic plug in.A rs 232 cable connects from a serial port on the
computer to the interface , I think this is used to key the radio.
NOTE: I dont know how to check this serial port for activation or
operation. Im using a older but very stable Gateway computer running
Windows ME. OK here it gets sticky I dont know if I can explain this
but here goes;;; inside the interface there are three leds with three
jumper block with three pins each. the manuel says to send info from
your computer in the program you use and one of these lights will
blink then you install a jumper accordind to if you want that info to
go to the radio or the cw jack on the back. two of these leds are
lit constantly. HELP PLEASE
ki4mzg

From: Jay
Topic: 2723 Message: 2779

I downloaded the fix but still no change, thanks Moe I thought you had it thats kinda the way this acts. the three leds I mentioned before ,after reading more I see they are for: #1=RTS , #2=TXD , #3=DTR . when connected to cpur #1 and #3 stay lid all the time. this sound card comes with shareware programs Tx in these programs does not work on them either. I checked and rechecked the mic jumper set up. I thought this would make a good ,cheap and easy set up but it is looking like it is beyond my ability to get up and going. computers are my weak area. thanks KI4MZG Jay

hostmode=AGWPE that blocks all other settings on this screen. in
station setup I have unproto port = 1 and unproto address =
aprs,wide. the sound card interface passes data to and from the
interface and computer via3.5 mm stereo jacks to sound card audio out
and line in ports. It connects to the radio via a mod plug to radios
mic plug in.A rs 232 cable connects from a serial port on the
computer to the interface , I think this is used to key the radio.
NOTE: I dont know how to check this serial port for activation or
operation. Im using a older but very stable Gateway computer running
Windows ME. OK here it gets sticky I dont know if I can explain this
but here goes;;; inside the interface there are three leds with three
jumper block with three pins each. the manuel says to send info from
your computer in the program you use and one of these lights will
blink then you install a jumper accordind to if you want that info to
go to the radio or the cw jack on the back. two of these leds are
lit constantly. HELP PLEASE

FYI, I only partially agree with that response.

I do agree that the Mic-E data format has a 3-bit Mic-E message identifier encoded in the Destination Address; this message identifier can be an emergency message code.

I think I can make any TNC send a Mic-E formatted packet, but will agree that most software does not support sending Mic-E packets.

Mic-E is "a" standard APRS format.

From: Bob Thomas
Topic: 2724 Message: 2786

In my humble opinion, sending an emergency beacon is like sending SOS and we all know that is taboo unless there really is a serious emergency. some here may disagree, but i won't send it out unless it's needed. i received one of these several years ago on my dos aprs screen. some here may remember it as well. the screen turned red, then the computer started beeping like it was in death mode. it turned out that a very prominant aprs guru from atlanta was in gatlinburg trying out his emergency beacon on low power with his thd-7. i was only a step away from contacting authorities with his location when i made contact with him. his beacon was picked up in the local network, then made it's way here to flag pond. for some reason, he wasn't happy with my proper response to his emergency beacon. i agree to being very careful, but i would never try to test it on any frequency, unless it was an actual emergency. i wonder what would happen if this went through via internet links? as far as subscribing to other aprs sigs goes, be careful. i didn't like 200+ emails a day from the one i used in the tapr group. thanks for the link below.

One great website to start looking for answers to questions like this is the
APRS Capabilities overview site:
http://www.eskimo.com/~archer/aprs_capabilities.html

Looking at that list, it looks like only see Kenwood radio's (TH-D7 and
TM-D700), APRS Dos and Xastir will respond to Mic-E Emergency packets. In
addition, APRS+SA and Xastir will respond to the word "EMERGENCY" in someone's
status text (well, specifically, the words "ALARM", "ALERT", "WARNING",
"WXALARM", "EM" in the TO: field, or "EMERGENCY" anywhere in the line).

I can tell you from personal experience how Xastir respond; it pops-up a
dialog box showing the station's emergency beacon, their direction/distance
from my station and their status text. I then have the option of clicking a
button to zoom in on that station.

2788. Re: Knoxville Marathon, 4/1/2007, 12:00 am

Yahoo group: EastTNAPRS
Date: 2007-04-02 02:47:15 UTC
From: William McKeehan
Topic: 2767 Message: 2788

The use of APRS at the Knoxville Marathon today was a great success.

The race officials, NCS, and other volunteers were happy to be able to follow the race by monitoring the APRS displays.

We only had two stations on the air, but they seemed to get the job done - one running lead/trail and a display station at the finish line with the race coordinators.

Now, imagine with me if you will....if everyone on the course had APRS.

Knowing the position of the Water stops would not have been too important, but there was a lot of information that could have been passed using APRS.

It would have been good to have another mobile tracker to follow the tail while the lead is on the course.

It may have been good to also have other APRS trackers shadowing the emergency crews to help coordinate their locations.

Having a station at the split telling which full marathon runners took the 1/2 marathon route.

Each water stop telling the bib number of the front runner for various categories.

Using APRS for these type of informational messages would have kept the voice frequency open for other traffic while providing more information to the race officials and NCS. It would also let NCS receive the message without asking for repeats, would have let NCS receive/respond to the information when they were ready for it, etc.

There are lots of potential benefits to using APRS at these events.

For those of you who could not make the event today, I hope you at least got to enjoy watching my motorcycle zooming around the map in Knoxville.

I look forward to seeing more APRS stations active in public service events in the future.

Subject: [aprssig] Why APRS mobile?
From: "Robert Bruninga" <bruninga@...>
Date: Thu, April 12, 2007 10:32 am
To: "'TAPR APRS Mailing List'" <aprssig@...>

> How come you want to run a TNC mobile ?
> Why not just use a tinytrack or opentracker ?

Because the essence of ham radio is two-way communications.

Because the essence of APRS is situational awareness. Having a channel that is the be-all-end-all of information on all ham radio activities going on in the immediate area.

Trackers are great assets at public service events where the hams need to track all kinds of vehicles that often do not have a HAM on board. These devices are able to be quickly installed at the start of the event and collected afterwords. I have nothing against trackers at all. There are many many applications for them and everyone should have a few...

But it makes little sense in a ham radio network concept to encourage active ham radio operators to be driving around transmitting only without listening, without reciving any local info, without any ability to receive messages or be called in case needed, basically without participating in the network they are using.

APRS is about receiving, displaing and exchanging tactical real-time useful information amongst a network of active ham radio operators that are doing something on ham radio. Of ccourse it is nice to have something to receive, so someone has to transmit too. So nothing wrong with trackers, but hams should be encouraged to install two-way communications where possible so that they are a useful asset to the network, instead of just a noise source with no means of being contacted.

Just my 2 cents.

The Hamilton County ARES group and Marion County amateurs are working to provide communications for the 3 State 3 Mountain Bike Ride on May 5. This ride begins and ends in downtown Chattanooga.

We would like to increase our APRS abilities as well as encourage any one interested, especially those with APRS equipment needing exercise, to participate with us. Many of you are well ahead of our learning curve, and we would like to learn from your expertise and suggestions.

This invitation is open to anyone who would like to participate whether or not he/she is an ARES member or APRS user or not.

If you would like to learn more or participate with us, you can learn more at our Hamilton County ARES website by following this link.

http://www.ares-tennessee-hamilton.org/Events/ThreeStateThreeMountainBikeRide/tabid/72/Default.aspx

The Chattanooga Bicycle Club, sponsor of this event has a website at www.chattbike.com <http://www.chattbike.com/>

Thanks,

Dewayne Siddon, KE4IDH

William McKeehan

---------- Original Message ----------
Subject: [aprssig] APRS event philosophy?
From: "Robert Bruninga" <bruninga@...>
Date: Fri, April 13, 2007 2:57 pm
To: "'TAPR APRS Mailing List'" <aprssig@...>

> But, in most events, I'm not sure everyone needs to know
> where everyone else is. ... We need key people to know
> where everyone is, however.

My appologies to the sender, but I will take that sentence out of context and launch onto my stump for a few paragraphs...

I have seen that kind of statement almost every time I have observed "traditional Ham comms organizers" accommodate APRS into their operations. They are clearly still thinking inside the traditional HQ-Knows-all box. They think of APRS as a vehicle tracking system and think that one big map display is all it is. Only HQ needs to know what is going on. Then they point to APRS later and say "it didn't help much. The voice nets were still overloaded with logistics issues and questions as to where everything was. The big screen was just fluff and cute, but not very useful..." Well DUH!

When I suggest that there should be a laptop at every radio position so that all communicators have access to the situational awareness that APRS brings, they say, "no, we don't need that, they can look at the big screen." Well,,,Duh... (footnote, in original APRS, you could connect a half dozen or more laptops to the single TNC via 2-conductor zip cord and pushpins at every desk in just minutes.)

The problem with ONE big screen is that it has to be zoomed out to see the big picture, making it usually impossible to see the detail that any particular operator needs to answer his immediate communication issue. Each communicator in an EOC or at a HQ, needs his own zoomable, layered APRS resource at his operating position so he can zoom, select, add objects, message, query, click, check, review, replay, update, move, log, annotate, announce, etc...

APRS was all about objects and the ability of ANY operator to update the virtual situational map in real time with all objects over which he had knowledge so that everyone could always see the latest everywhere. APRS was designed to support dozens and dozens of manually placed objects as well as those few RF equiped GPS objects so the the tactical picture was complete, and not just a side show.

Problem is, Uiview in particular has a very poor implementation of objects and chokes the net if more than a few objects are updated from any one console. Hence, people don't use APRS objects, no one sees them, and we still operate inside the box of a big screen side-show with little true benefit to the "comunicators" that are doing the "real" work.

And because of the "only HQ" needs to see where everything is, we have not offloaded "info" from the voice nets where still everyone has to ask HQ for where something is.

At least those with D7's or D700's or HAMhuds can see that XXX is YYY miles from them and either "approaching" or going away... Or can see bulletins and announcments on their radios. Or with their attached GPS display, can see where everything is. And using the techinques I have explained elsewhere, they too can MARK places on the map and inject OBJECTS onto everyone else's maps too.

We need to think outside the "only HQ knows all" and "APRS is a vehicle tracking system" if we are going to truly contribute to events. Everyone with a radio has the potential to be an APRS asset and that includes receiving and interpreting the information himself that he needs to perform his function best.

> That's the value of the "dumb" tracker. It's cheap, so
> it's widely deployed. Once it's permanently installed,
> it's nearly foolproof. And, people know it works because
> they can see their station on Findu.

But most events, communications needs are two-way and FINDU is usually for the public at home to watch, not for the guy on a corner with a cop, having to ASK HQ where the lead vehicle is when he should be able to see that himself on his own APRS radio or display or GPS.

> So they are ready for emergency communication. Granted,

> I've read far too many posts about balloons, special vehicles,

> searchers, etc, equipped with portable trackers that didn't
> work.

Yes, because they lacked a means for 2-way communications so someone could tell them to fix it. Or this chatter had to be conduced on the very voice network that APRS was supposed to be helping, not burdening. In ANY event, especially where trackers are used, the COMMS plan has to provide for a dedicated UHF Voice frequency for all these "APRS" issues to be worked out. These tracker-only stations need to have 3 radios.

1) One radio for the voice net they are supposed to be supporting for the function they are supposed to be doing at the event

2) Another radio (or band) for their APRS tracker

3) Another radio (preferably UHF) for the APRS voice channel for talking back to all the APRS operators and trackers that do not have APRS message capability.

It could be argued that a good two-way APRS station might be cheaper and more robust than the sum of all those other requirements. Of course, having said that tongue-in-cheek, even an event full of APRS 2-way communicators better have a UHF APRS coordination channel anyway because of all the OJT that has to be prformed on the air due to lack of commonality and prior experience with their toys.

> Okay, I'll yield the soapbox to someone else. :)

Thanks. I'm done too.

Soapbox off.

This sounds like a challenging event. Unfortunately, I will not be able to
come down and help out with it, maybe some others on this list will be able
to.

Do you have any plans for APRS or just going to use it to track SAG vehicles
if they happen to have APRS?

William, thanks for the reply.

We would like to be able to track the SAG and other support vehicles as well as, trying to find a way to track the beginning, middle, and end of the riders.

Of course all this will depend on the equipment and other resources available.

2799. Dogwood Arts Festival Bike Ride THIS WEEKEND

Yahoo group: EastTNAPRS
Date: 2007-04-25 13:03:50 UTC
From: William McKeehan
Topic: 2799 Message: 2799

I know this is short notice, but I thought some of you may like the practice.

David, KE4FGW, is organizing the communications team for the Dogwood Arts Festival Bike Ride this Saturday, April 28. The event starts at 9:30 AM in front of West Bicycles in Farragut and is expected to end around 3:00 PM.

More details available at this website:
http://westbicycles.com/newsite/spring_century_new.htm

If you know of anyone that would be able to help, David could really use the assistance.

2800. RE: [EastTNAPRS] FW: 3 State 3 Mountain Bike Ride

Dewayne, I have talked with Shawn Stoddard about this and have offered him my assistance with APRS on this bike ride. I'd like to see how many folks from the Knoxville and surrounding areas would be willing to help you all out with your bike ride, especially with the APRS aspect.

APRS was a huge asset to us when we did the Cherohala Challenge in June. In fact, if any of your team wants to come up and help us out as well as see APRS in action during the Cherohala Challenge, you all are more than welcome to. The Cherohala Challenge is a 115 mile long bike ride traveling through the one hundred plus curves of Hwy 129, "The Dragon", and up the "Cherohala Skyway" to over 5300' in elevation. The Cherohala Challenge occurs on June the 16th, 2007.

2804. Re: [EastTNAPRS] Setting up a digi real soon

Yahoo group: EastTNAPRS
Date: 2007-04-26 18:46:43 UTC
From: William McKeehan
Topic: 2803 Message: 2804

I'm always happy to see more stations on the air, and a digi in an area that could use some extra coverage is a great step (it generally helps to get others in that area involved with APRS).

The only "issues" that I'm aware of with putting up a fully WIDEn-N compliant digipeater is that the digi will not respond to the "OLD" settings (i.e., RELAY,WIDE). Actually, that is by design. The old settings allowed packets to hop back and forth between the same two digi's; the new settings eliminate that problem.

I'm sure you've seen this, but WB4APR's discussion on the topic can be found here: http://web.usna.navy.mil/~bruninga/aprs/fix14439.html

I'm not sure what they are doing in the Tri-Cities area; I don't travel up there enough to know. Maybe some of them will jump in the discussion here and let you know. If they do not (and do not respond to other communication attempts), then I would assume they are on some older settings (either RELAY,WIDE or WIDEn-N in UIFlood as opposed to UITrace). Many people got involved with APRS long ago and while the digi's are still up, they may not be actively involved with APRS now.

The Knoxville ares is generally running WIDEn-N; although WA4KJH-7 remains operational responding to RELAY, WIDE, TRACE and TN. (Right now, WA4RYW-7 is temporarily off of the air; he is the big WIDEn-N in Knoxville).

From: Bob Thomas
Topic: 2805 Message: 2805

stephen,
the opposition was that they didn't or wouldn't change out the old style tnc's they had up(wa4kjh-7 is one i think). it also kept a lot of "out of their area" stuff from passing through their already crowded knoxville area with posits they weren't really interested in seeing. they were getting their "pages full" of mobile and out-of-state stuff. i think that's the sort of problem we have up here with some of our other older local digis. someone is working on a new digi in the knoxville area that will eliminate the bottleneck so that should get us all on the same page... hopefully across the state of tennessee like it used to be. i really don't understand why bottlenecks have to exist for such a long time on a national network frequency. i am guilty myself and admit it took a long time for me to change my old setup. it would be too simple to propose a "local group aprs frequency" for crowded metro areas with a gateway node stack or two to allow them into the national network frequency... been down this road before. i think it would be a good idea for tennessee to have two aprs frequencies.. (1.) 144.390 and (2.) an unused one such as 145.??? for local events, etc. that would allow for all those pre widen-n nodes, etc. to use the old setup where they all digied off each other on the local network. i'll add the group to this reply so they can add some perhaps better enlightenment?

G R E A T find !!!!!! [:D]

I just finished installing Ubuntu v7.04 <http://www.ubuntu.com/> (linux) as a dual boot on my windows system to try to install and learn xastir <http://www.xastir.org/> for that very purpose. Might still pursue that (sometime, maybe, or probably not) but why fix something that's not broken - especially with this upgrade. Guess I'm just a die-hard windows kind-a-guy. Thanks for the find.

To: "TAPR APRS Mailing List" <aprssig@...>

Hello All,
We have a half iron man race coming up in Macon, GA on June 3rd. I am still trying to get people in our local clubs to help with getting some aprs trackers and digis together, but I have not had much response. I wanted to ask on the big list if you are in the area of Middle Georgia if you would be willing to let us use some of your APRS gear.

In total I am still in need of at least 2 trackers and at least 2 more digis. We will be in a hilly area and I know that we have to cover the area in order for our trackers to work well. Please respond to me at ae4xo@... and we will chat.

Thanks!

That's the same weekend as the American Diabetes Ride from Oakridge to Harragote and back.

I haven't heard a thing locally about this event, so I'm not postive on the date.

For those that might want to understand a little bit more about the X1J4 nodes. The link below gives a little more insite.
http://www.packetradio.com/pdfzips/2000PacketHandbook.zip

Once you learn what you have to work with, and how it operates. things get really simple.

Scott, I think might answer the question you had IRT MFJ1287B and Node capabilities. (EPROM)

Good Morning METERS members,

It is with great sadness that I inform you that Jerry Moore AF1P is a Silent Key. He was a good man - generous with his knowledge and his time and always willing to help. As you know, Jerry was the METERS Public Service Event Coordinator, a member of the Nomination Committee, and Acting Member-At-Large.

Jerry died last night of a heart attack. Please remember his wife, Mary, and his family in your thoughts and prayers.

73,
Tyra/AI4KG

I wonder...why do you not participate in Public Service Events.

I can think of a variety of reasons that people may not participate in these events, but I'd like to hear from you.

There are 85 members in this group. On the last 2 Public Service Events in the Knoxville area, only 2-3 people from this group participated.

Let me hear from you. Why do you not participate in these events.

No judgement, just curious.

Do you not like the people who organize the events? Do you have health issues that keep you from being able to participate? Anything.

Feel free to respond to me directly if you do not want your response in a public forum.

Thanks!
William

Thanks for the reply.

I can relate to time being a problem. Time limits only let me help out for a short while at the Dogwood Arts Bicycle Ride (aka, Crybaby 100) and it's going to keep me from participating in at least one event this year (the Cherohala Challenge).

I do remember the first time I met you was at the MS-150 a few years ago.

BTW, if my experience is anything to judge by, you'll be busy with Joshua for the next 18 years (or more) :-).

I rode down to Chattanooga this past weekend to help out with an event they had down there. I put about 400 miles on the motorcycle that day. Leaving home at 4AM, I was worn out by the time I got home that afternoon. Unless you just enjoy working events like this (and being worn out), I'd not advise traveling that far to do it.

As for you loosing your mom, I've not lost anyone that close to me yet, so I can't even imagine what you're going through. I do remember my mother dealing with her dad getting sick years ago and I remember it consumed her (and she was only one of 7 brothers and sisters who shared in taking care of him).

Again, thanks for the response. I'm getting the kind of information that I wanted to hear from this question.

By the way, for anyone else out there thinking about responding, a perfectly acceptable answer is that you just don't enjoy public service events. There are many aspects to HAM radio and you don't have to like them all - for example, I don't care about DX or CW.

From: Jay
Topic: 2821 Message: 2828

William,
With me it comes down to two things, one; what do they need and what do I have to offer, and two; is it an event that is interesting to me. When an event is coming up most of the time only a general "anyone interested contact this or that person" I end up thinking well I dont have anything to offer and don't take the time to ask if I could be of help.I do have voice mobile on several bands although no mobile aprs, I can't even keep this base aprs running ,@^%^@^^@^& *%()#% #!!! , but thats another story. The other thing ,and I know this sounds selfish but alot of events you work really doesn't interest me. Where the lead runner or bike is during a race or ride somehow doesn't seem an important thing to me. But stations along the route that could aid medical personel to a person in need of help would be something that I would be willing to help with.

Things I do now are: being close to the national park , my wife and I moniter wilderness protocol frequencies and have many times given assitance to ham hikers however its only been just minor requests for information or to relay info to a family member at home via a phone line. We also have twice helped stranded 4 wheel drive riders alone and stuck out in the woods. One of those was stuck for 14 hours before I heard him calling on a cb channel, which by the way is a good reason to keep an 11 meters radio up and running on the desk.We have helped in some local traffic accidents and given local directions to out of town hams on simplex and repeaters many times.
thanks 73 Jay KI4MZG

Another wonderful response!

Thanks for the input Jay. Responses like this really give me a better picture of what I can do to encourage more participation in public service events from those that may be interested. Explaining what type of needs there are for a particular public service event would give people a way to know if they would be interested in helping or not. Great input Jay...thanks again!

You'll have to tell me more about the wilderness protocol frequencies that you monitor and how you do that. I've read a bit about it, but have not figured out how to get myself to monitor those frequencies; I don't have enough radio's :-).

Since shadowing the lead and transmitting their position is one thing that I have done at several events (and really enjoy doing), I thought I would take a moment to explain a few reasons about why it is important.

(Note: importance is relevant, this is clearly not life or death).

Knowing the location of the lead/tail for an event helps:
- police know when roads need to be closed and re-opened;
- medical personnel know where they can position themselves to best respond to a medical emergency;
- event officials know when supplies/personnel need to be at down-stream water/rest stops;
- event officials know when to expect the runners to begin crossing the finish line;
- provide a "preview" of the course to event coordinators so they can make adjustments if need be (for example, if there's a particular area where a dog or debris in the road is causing problems for event participants, being there with the lead I would see this early and be able to let net control know about it and they could in turn let the event coordinators know so the situation would be handled before the bulk of the runners/riders get to the area).

Is this as important or exciting as responding to a house fire (for example)? Not even close, but to the event coordinators, it is valuable.

William

William,

We really appreciated your help with the ride at Chattanooga and do understand that it was a really long day for you. You?re and David?s help allowed us to learn a bit more about APRS and its (and our) capabilities. I really don?t think we would have learned as much or had as successful event as we had without both of you.

I?d also like to comment that my participation in these events is limited by time available as well as planning ahead to fill my truck?s gas guzzling? tank.

Thanks, again and I hope that sometime in the near future I can return the assistance.

The last two words of this statment " to me" is what I was trying to say. I did not mean to say that what you do at these events is not of any importance. I am mostly lazy and for me to really get involved in something it has to be something that I think sounds interesting to me. Your response to this statment, however told me much more about what a service you do for these events. I dont respond to calls for most of these events in part because I dont know if I have anything to offer. If before an event there was a post explaining what services you were going to try to provide to the event staff and what you think you would need from others to make the event work would really help me if not everyone that has not ever helped with things like this. For example if you said you needed lets say, 5 people with 440 mobile capability and 3 people with mobile aprs for an event on sunday . If I had one of these set ups and the day off I would likly show up because going into the event I would feel like I had something to offer that you needed. keep up the good work William 73 Jay KI4MZG

I totally understand that what you were saying. I just saw that line as an opening to explain why I do it and how some can see it as important.

I'll certainly take your feedback and use that to improve future requests for assistance.

Thanks again.

2834. Wilderness protocol

Yahoo group: EastTNAPRS
Date: 2007-05-10 13:32:54 UTC
From: Jay
Topic: 2834 Message: 2834

This is a system that everyone should know at least a little about
however it seems to me very few do.
Wilderness protocol is basicly a band plan suggestion that stations
that are able to should monitor simplex calling frequencies at
specific times for emergency or priority trafic.
The primary frequency is 146.520 and secondary or back up frequencies
being 52.525,223.50, 446.00, 1294.50. Stations then break into three
groups according to times they can monitor:
#1 stations listening on one or more frequencies for five minutes every
three hours starting at 7 am local time , as in 7:00-7:05 am then
10:00-10:05 am ext. until 10:00-10:05 pm local.
#2 stations that can monitor every hour for 5 minutes.

#3 those monitering continuously

We monitor 146.520 on a radio here 24 - 7 and keep a scanner monitoring
446.00. I try to refrain from rag chewing or calling during the five
minutes at the top of each hour.
Our being close to the Smokey Mtn. and all the hiking trails makes
this area a perfect fit for this system. If you have ever been out of
town without a repeater directory and no manuel to your ht then you
know how hard getting a reapeater can be with tones and offsets to
be programed. simplex, although at the expence of coverage area
simplifies this problem, and in an emergancy to a hiker or backpacker
or just someone visiting the area needing assistance of some kind
this can save time and trouble.
Before my latest problem on my aprs station, which I am working on
fixing now, I have been atemping to come up with an aprs map of the
Smokey Mtns. with enough detail ,as in roads ,trails and landmarks
that would help in an emergency to locate or help direct someone
that has lost there way.
Thanks as always 73

This sounds like a great idea for many of us in this area to be doing, especially with our proximity to the park.

I'd like to hear some of the stories about the times that you've heard people calling on those frequencies and how you've been able to respond and help. In looking at things on the internet I got the impression that "emergency" calls on those frequencies were very infrequent, sounds like you've had a different experience.

William, you have touched on the very reason that I think very few people attempt to help with this. It is not very exciting and rarely do you get to really help someone. I have however had the chance to help a few people , although not really life and death situations. I have severl times placed phone calls for hiking and camping hams to family members but these were just " I'm going to be late" or " I'm ok see you tommorrow" kinda things. Last year after some strong storms in middle and west Tennessee I had a man contact me on echolink. he had a daughter in Tennessee and had not been able to reach her , he was near Washington DC and although he had been trying her phone from there and hadn't got through, I tried her number and she answered first try. She was fine and I relayed a nice conversation for them. As I mentioned before Twice I helped stranded 4 wheel drivers both of these calls came to me via cb band . once I just contacted the young mans friends and then helped direct them to him, btw he was just using one of those handheld emergancy cb radios. The other time the man was stuck on a rock in Payne Hollow. by the time I heard his call at midnight he had been there 14 hours with the help of a few freinds, two four wheel drives and a four wheeler we got to a very thirsty tired fellow. He was about 350 lbs + and said he didnt think he could have walked out. He told us that he had contacted several people that day that offered to help him for a fee. My wife relayed info to us that night via 146.520 while keeping him on the cb. through her and some horn blowing we found him easily. Most of the time all you do by practicing this type of service is nothing but when you do get a chance to help someone the feeling is great. Another up side to this is your freinds get to know where they can always go to find you.

73 and thanks again Jay

i agree, this sounds like a great idea for those of us that may not live in the park's vicinity, but live next to or close to the appalachian trail as well. i usually listen to 146.52. most hikers now use cell phones. we have a team here in unicoi county called the unaka mountain search and rescue that consists mostly of hams. i've been used as relay station, net control, and have helped in some of their searches when ask for help. my wife and i are the only hams in the southern end of our county and have hiked, hunted, or fished most of the area and know it well. there are several areas in east tennessee that are considered "wilderness areas" by me, meaning that they are so remote that phones or public service frequencies are of little or no use. this is a great idea. one of the neat things about aprs is that we become more familiar with the geography of our local areas.

It seems to me , although I haven't tried it yet, if aprs was incorporated into this along with a fair knowlege of local landmarks, geographical features, area trails along with the right trail and road maps would really help in a rescue situation. You could locate a point with log. and lat. or quickly get log and lat of a location by just pointing on a map spot by trail or geographic information.I can picture a location much better by seeing it on a map no matter how familiar I am with the area and I think it would also able you to more easily locate resources in the area that might not be thought of otherwise and could greatly help in a search and rescue.

From: Robert Thomas
Topic: 2834 Message: 2840

yep, you're right, and i have done just that. i once used topo maps to get rough coordinates for a rescue. the landmark was two cival war graves that were facing each other, but wasn't on the maps. i just happened to know where it was, asked if it was nearby, then relayed the info to a rescue chopper. my aprs maps confirmed my estimates were close. the chopper stopped directly over the rescuers' heads, but couldn't see them for the trees. you can add stuff to aprs dos maps, make your own, etc. using a gps unit, you can plot trails, landmarks, etc. it's been a while since i've played with the aprsdos maps. i remember they were text based files and it was simple to add stuff into them. it would be a good idea to have local landmarks' coordinates listed in a notebook for easy reference. aprs is good for "foxhunting", too. aprsdos has azmuth, so with a good map, known reference points, you can easily triangulate and plot a transmitter. that's how gps works, but electronially. the gps receiver triangulates it's position from multiple satellites using simple trigonometry priciples. the process works in reverse, too. i'll leave that to your wildest imaginations to figure out what for and who does it. and if you need help, ask hans solo, yoda, ob1, r2d2, darth vader, and 'ol ben ladin and the taliban wookies...hee hee!

2842. Public Service Events: What is a SAG?

Yahoo group: EastTNAPRS
Date: 2007-05-14 02:15:39 UTC
From: William McKeehan
Topic: 2842 Message: 2842

In thinking about some of the discussions this past week, I drafted the following to help those of you who have not participated in some of the public service events understand what a SAG is and does. I presented this on the net tonight. I hope to follow-up in the coming weeks with some details on other stations used in public service events.

I will be one of the SAG vehicles for the Tour de Blount this weekend; keep an eye out for KI4HDU-7 as I mobile along.

William
KI4HDU

What is a SAG?

During bicycle related public service events, there is often a need for SAG vehicles.

SAG is an acronym for "Support And Gear." It is a vehicle that picks up or otherwise assists riders who have had to stop riding, either due to fatigue, injury, or mechanical failure.

The reason for putting an amateur radio operator in the SAG vehicle is to allow constant contact between the SAG vehicle and event officials. The routes often cover areas where cell phone coverage is non-existant.

The SAG vehicle may have a set agenda or route that may change due to the nature of the event or at the directions of the event officials. Also, being mobile on the route, a SAG vehicle may be used to relay a message between the event officials and others on the route (rest stops, etc.).

What is expected?
A SAG vehicle will move along the route in the same direction as the riders. Keep your eyes open for any "down" riders. Stop and check on any that you see. Offer assistance when you can and call in for additional support when you can not (i.e., if the rider needs medical attention or transportation that you can not provide, etc.).

Follow the route. Even if you know a faster way to reach the location, you want to ride along side the riders as you travel unless specifically instructed otherwise.
NOTE: Sometime the route takes the riders on bike paths or other places where SAG Vehicles cannot travel. Do your best to parallel these areas, until you can get back on the actual route.

What equpiment is needed?
A vehicle. If the event is a bicycle event, you should have the

capability of carrying at least one bicycle and one rider. It is nice to have some identification visible on your vehicle, like flags or signs, to help the riders distinguish your blue ford from the others in the parking lot.

Radio equipment. Generally, communications will take place on a 2 meter repeater. A mobile radio with 40+ watts of power output with a vehicle mounted antenna is recommended. Depending on the area covered by the event, a dual-band 2m/70cm may be necessary. There are times when you will be away from your vehicle (such as when assisting riders); during these times, it's nice to have an HT that you can take with you to continue to monitor the net.

Often times, the event coordinators will provide a collection of tools and equipment (such as hand pumps and tubes) for the SAG vehicles.

How can APRS help?
If you are a SAG with APRS, first, NCS can follow your location easily. If a participant is in need of a SAG, NCS can direct the closest station to the participant with very little time spent trying to identify which SAG that may be. Second, if you have APRS receive/display capability in your vehicle, you can see where the other SAGs (and maybe even the lead/tail of the event) are located thus allowing you to position yourself better (i.e., keep SAGs spread evenly over the route).

If you happen to go out of range of the repeater, you may still be in range with APRS. The NCS station could send you APRS messages to communicate (i.e., asking you to QSY or asking you to respond to a participant in need, etc.).

The NCS could send APRS Objects to indicate where a SAG needs to go (i.e., the location of a participant needing assistance) allowing you to easily identify the location and drive to it.

2843. Re: Public Service Event participation

Yahoo group: EastTNAPRS
Date: 2007-05-14 02:25:50 UTC
From: William McKeehan
Topic: 2821 Message: 2843

I came across a good article in the April 2007 edition of QST magazine. On page 80, in the Public Service section, they have an article about the Maricopa County's Simulated Emergency Test (SET). They use a public service event (specifically, an MS 150 bicycle ride) as their SET.

The event is a learning tool because they "actually handle real emergencies, exercise real traffic and protocols and use our personal abilities to make a difference in the lives of participants." They go on to say "you pretty much have to know your equipment."

They use APRS trackers on all of their key vehicles and manage a net with 50 to 100 participants.

"Public service events provide a unique opportunity to exercise your EmComm skills."

"Having a moving map display and messaging capabilities within the EOC gives the County Emergency Management the chance to see how managed Net operations are so incredibly valuable when you have real time tracking views of the event."

I thought the article was a good one, and I came upon it in a timely manner given our recent discussion.

As for myself, I work all day on Saturday and Sunday, and am therefore unavailable for any public events, Sorry.

William,
I am located outside Murfreesboro, TN but joined this group because A) I am an APRS enthusiast who is rejoining the ham world after 3 years away due to work shifts and B) this group seems active and a place where I can pickup a lot of good information about the state of the art and C) because you have events that I am interested in driving a distance to participate (balloon launches, perhaps a fox hunt here and there).

For me distance and the cost of travel is a real factor as is my present more liberal but still restricting work schedule, but I WILL be there from time to time because you guys are a group I want to become better acquainted with.

Anyway, when you count the 85 I assume I am in that number and wanted you to know that the breadth of the membership geographically is having at least a limited affect on participation.

I agree with others that the better we can be informed about the needs and desires of the events' sponsors, the more likely we will see a need we can feel and be motivated to action.

Keep up the communication of opportunities. I am sure I'm not the only one wanting to participate but needing to know more about the opportunities.

Sounds pretty cool; being able to help someone can feel great!

Three questions. Where is Payne Hollow? Which CB frequencies/channels do you monitor? Do you also monitor FRS/GMRS?

An event that I worked a couple of years ago was Rally Tennessee (http://www.rallytennessee.com/2007/index.php). That's much closer to you than we are.

I'm not positive if they still use Amateur Radio for their communications; they had problems getting volunteers and were looking at commercial communications options.

There are generally public service events in just about any geographic area that you find yourself; If you have a group of operators that are interested, you can begin by offering your services to some events in the area. Once you establish a name for yourself, you will have event coordinators who come looking for you when they need your abilities.

This happened to the Blount ECS group; specifically, last year people saw APRS in use at the Knoxville Marathon and came to the Tour de Blount to ask about the technology and find out if we would be available for their event.

This tells me the service is valuable.

Givn that public service events are great emergency communications training opportunities, they seem like great events for ARES organizations.

William, Payne Hollow is a local group of trails here in blount county that kinda borders part of the foothills parkway. It runs between Rocky Branch road and buterfly gap road. It at one time was used alot for four wheel drive riding but I think is private now and not open to riding although I think some still go in there. As for cb frequencies it seems around East Tennessee geographical areas use different channels. Blount County is most active on channel 33 but if you have children around or don't like rough talk I don't recomend monitoring here. Of course channel 9 would be a choice but I find if someone needs help they will go to any channel they hear activity. I have thought of including frs gmrs into this but I really don't know alot about avalable base radios and antennas to get enough coverage to be of any good.

There are many applications for using APRS in Search and Rescue operations. The NWAPRS group has a pretty good web page (although somewhat dated): http://www.nwaprs.info/sar.htm with some good pointers on APRS in SAR operations. And there are some groups groups deedicated to using APRS in SAR (i.e., http://health.groups.yahoo.com/group/SAR_APRS).

If I were home more often and had some free time, SAR is something I would like to get more involved with.

The Tour de Blount is this Saturday, May 19. Starting at Heritage High School; I assume that we will meet around 7 AM and will be busy until 2 or 3 PM.

Detailed evebt route maps are available here: http://www.foothillstriders.org/

The Blount ECS group (http://www.blountec.org/joomla/index.php) will be coordinating communications. Their meeting is this Tuesday night, May 15 at 7 PM at the Blount EOC. The Blount EOC is the building right across the street (Louisville Rd) from the Wal-Mart in Alcoa.

They have a net that meets on Thursday nights at 9 PM on the 146.940 repeater.

Time for me to plug Xastir!

Xastir's map functions are HUGE. You can use APRSDos, WinAPRS, UI-View, NOAA Shapefiles, USGS geoTIFF topo maps, shape files (i.e., publically available Tiger data), GNIS (i.e., publically available USGS Geographic Names Information System), etc. I frequently convert GPS tracks into maps for use in Xastir (that's one reason I like to pre-run event routes).

William,
I will have to sit the Tour de Blount out, I have to work Saturday, however I will try to help at the next event I can. I would be interested to take part in one of these events now. Ok you peaked my interest. I would like to know what frequencies you will be operating on saturday , I can listen in at work.
I still havn't found out why my agw packet engine won't see my seriel port so when I get time I think I'll atempt to make a printer port to seriel port cable and run it that way. I really should just replace this old computer with a newer one but I hoped I could get by with this cheapie just for aprs .
thanks Jay

I've not been able to make any of the recent meetings, so I'm a bit out of the loop about the details of this event. I suspect that they will use the 146.94 repeater as the primary machine, but at this point I will not know for certain until the morning. The ride will start at 8 AM.

I encourage everyone that can not participate but may be interested in working future events to listen to the net (or a portion of the net) tomorrow. You'll get an idea of what kind of traffic is passed for these events.

2858. Upcomming Public Service Events

Yahoo group: EastTNAPRS
Date: 2007-05-18 19:43:16 UTC
From: William McKeehan
Topic: 2858 Message: 2858

We've talked a lot about Public Service Events on this list recently. There are a couple of opportunities that I know of in the next month or so.

One is July 2-3; the American Diabetes Ride from Oak Ridge to Harrogate and back. I'm not sure what's going on with this one or what they need, maybe someone will jump in and let us know.

The second is July 16; the Cherohala Challenge. This is a 115 (and two other shorter routes) that starts and ends in Tellico Plains (at the High School). Rick Coffey, KF4QVI (at) charter.net, is coordinating communications for this ride and is in need of SAGs (5 additional SAGs would be helpful). This event is challenging for the radio operators as well as the riders. It covers some beautiful country.

I'll let you know more details as I have them.

I find that looking at the data after an event is often helpful in figuring out what to change for future events.

I've uploaded some gif's that I made with Xastir based on FindU data. These gif's show the tracks of the various APRS stations on the course today.

Have a look and share any thoughts you may have:

Looks like the lower end of the route has some serious coverage issues. I guess we never had a working tracker on the metric route between Coning at McGhee and where it merged with the century. It also appears at least my setup had some problems in the Rocky Branch Rd area (which I went thru at least three times) and the Dupont section of Sevier County (which I covered twice).

Thanks, Williams, for letting me borrow your equipment. Next year, we'll get the net control APRS antenna further out from the building.

73,
Hal Weeden

There was very little coverage beyond Look Rock. The road drops behind the ridge at that point. Everyone continued to have poor coverage until we got up near Rest Stop 3 (Hwy 129 @ Six-Mile). I wonder if a digi in the Look Rock area would help cover that area.

I was rather surprised at the lack of coverage in the Dupont area. All I can figure is that we were too close to the digi there.

As for th Rocky Branch area, it appears to be in a good valley with hills on each side of it, so that may have contribued to it not being covered.

Field Day 2007 will be held June 23-24, 2007 which is just a few weeks away.

Just demonstrating APRS will get 100 bonus points:

7.3.10. Non-Traditional Mode Demonstrations: A maximum of 300 bonus points (100 points for each demonstration up to three) for setting up a demonstration of a non-traditional mode of amateur radio communications. This includes modes such as APRS, ATV, and SSTV.

Anyone have any plans or Field Day this year?

William

I have already mentioned something about APRS with SMARC. They are interested. I wanted to get with you and Roy and see what you all thought about doing something for SMARC on field day. Something like we did last year should work. Or we can make it something else to get the points for them.

I want to do something for SMARC again this year with APRS.
We have a little more equipment this year. Maybe some contacts with
other field day sites could be planned. Looks like we used 145.01 Mhz
last year for our APRS demo. There is some packet activity on that frequency
and a little APRS shouldn't bother them on Field Day.

This year David gets to do the Field Day write up for our points.

This year David has been somehow appointed to run the 40-80 meter station. I want to leave that to the operators of that band and not so much coordinate it. I'm playing it by ear right now. I do not want to baby sit the station though, just setup and allow SMARC to use my camper and generator for whatever station they need it for.

I will be happy to participate with the APRS stuff in any way you think I can help out though.

Bobby, I've done that on several occasions for METERS over the years. The last one was right after one of the EMCOM testing sessions last year.

Perhaps it's time to have another session though for this year.

The METERS organization represents a fair number of Amateurs and I would like nothing more than seeing all of them active with APRS (and packet for that matter - that would make passing information for the Hospitals much easier).

I contacted METERS last year and offered to do a presentation/demonstration at one of their meetings. I was told that they would contact me and setup a date; I've not heard anything about it since then.

My schedule has changed since then and it would be difficult for me to attend one of their meetings right now, so I'm not sure when/if I would be able to do a presentation for you guys.

Field Day may be a good opportunity; who is coordinating the Field Day activities for METERS?

It doesn't use the internet. That is a common misconception - that Winlink relies on the internet. Fact of the matter is that what makes it special is that it works without the internet, but can use it when it needs to. Winlink is internet independent.

Msg to the SM, as I understand it needs to be in NTS format. Nothing in Winlink prevents msg from being put into that format. It's just text.

2877. RE: [EastTNAPRS] Field Day Time Again

Yahoo group: EastTNAPRS
Date: 2007-05-23 20:35:05 UTC
From: Bill Farnham
Topic: 2863 Message: 2877

To more completely answer William's question, the following is from page 13 of the full Field Day 2007 Package from ARRL:

http://www.arrl.org/contests/forms/fd-2007-packet.pdf

"Many new modes of communication are being introduced into the amateur?s ?bag of tricks.? To encourage this experimentation, you may earn up to 300-bonus points by setting up demonstrations of a ?non-traditional? mode of communication. You may earn 100 points each for up to three different demonstration stations. This would include as APRS, ATV or one of the modes that is not covered by the three categories of QSOs ? CW, Digital and Phone. Be careful choose this mode. The digital category already includes such things as RTTY and PSK31, so they don?t qualify for Also you can?t do the same demonstration three times for 300-points. It must be three separate demonstration modes.

Many people ask about amateur radio email and the demonstration bonus. For 2007, on a trial basis, you [can use] radio email, such as Winlink, to pass the formal traffic and messages in and out of your site and count it for one demonstration bonus. Remember that in order to claim the bonus and NTS message credit, any radio email traffic or out of your site must be via amateur radio RF. Also, keep in mind that when performing the radio email demonstration can not have another digital transmitter on the same band simultaneously."

It's not at all unusual for both the sending and receiving sides of a Winlink email to both send and receive their messages via RF. So long as it is done by RT, there's no problem with Field Day rules whatever, and it does meet the criteria for being a non-traditional and digital mode.

Hope that helps!

From your location and with the same equipment, you should be able to connect
to KF4YMC-1's PBBS on 145.05 and demonstrate that mode...I guess "traditional
packet" is not something "non-traditional", so no bonus points there, right?

That certainly makes it very clear that WinLink counts and it appears that the only requirement is that the message originates on RF.

I like it when they make things clear like that.

Thanks for the research Bill!

Folks,
I wanted to pass this along to everyone so we could start getting set up for this event. It typically takes 2 hours or so for this event and last year it conflicted with the Cherahala Challenge so we couldn't work it. I told Larry we would be glad to help this year.
For this event we need at least 3-4 folks. More is always better. The bar-b-q afterward is tasty and they have some live music and other activities as well. It's always a fun event.
If you will be able to help out on this ride please let me know ASAP so I can start putting together a roster for the run.
Thanks
Rick

APRS paths

The following is a reply to a post made on the TinyTrak group regarding the use of the "path" statement. I forgot who was responsible for this reply to give them proper credit, however it is very informative. de kd5om

APRS paths are the result of a number of inter-related issues. Here is some background and information on APRS digipeating and path selection.

Digipeating is much more critical to APRS than to conventional packet because APRS heavily involves packet data transmission to and from moving vehicles. [Traditional packet was overwhelmingly used between fixed locations, typically with better antennas and more power.]

*** WHY DIGIPEATING IS MORE ESSENTIAL ***

Signal levels that you may consider adequate on voice WON'T BE on packet, because data transmission is an all-or-nothing proposition. --ALL-- of a packet has to be received PERFECTLY to recover --ANY-- data from it. The kind of noisy, scratchy, not-completely-hard-quieted, operation so many people inflict on voice repeaters, especially with underpowered handhelds, JUST WONT WORK on data transmissions. A pop, a momentary burst of white noise, flutter, or multipath-induced phase distortion that you don't even notice on voice WILL be fatal to a packet transmission.

With APRS, the problem is even worse than with conventional [connected] packet because it operates in a non-connected mode. With traditional packet, a station receiving a defective packet will automatically send a request for retransmission to the sending station (or the sending station will automatically retry if the receiving station doesn't acknowledge in a reasonable time). With APRS there is no ACK/NAK (Negative Acknowledgement) handshaking process. The sending station just blasts out packets and never knows if the receiving station(s) successfully received them. All that happens is that the receiving station ignores the packet if it is defective in anyway. [This is the price you pay for the one-to-many broadcast-like nature of APRS, compared to the one-on-one nature of traditional connected packet.]

Signals to/from mobile units can and do fluctuate in strength by 15-20 dB as the mobile moves over even a short distance. For reliable data transmission, you must have massively excess signal strength over the intended path. Enough excess signal that even with a 20dB drop, the signal will remain noiseless and hard quieted. [Note that the instruction manual for the Kenwood D700 acknowledges this fact by stating that you can't expect reliable packet operation until the S-meter reads full scale.]

{{FUNDAMENTAL UNAVOIDABLE FACT OF PACKET LIFE: Roughly speaking, a given antenna installation and transmitter power will produce about 1/2 to 1/3 the
RELIABLE range on APRS packet that it produces on FM voice.}}

*** APRS DIGIPEATER USAGE ***

To increase the reliability of transmission from mobile units (i.e. likelihood that a packet will "get through"), APRS uses two categories of digipeaters:

1) "Public" digipeaters in high locations (typically hilltops, the tallest building in town, water towers, etc); i.e. similar to the placement one would choose for a voice repeater. This type responds to the alias call sign of "WIDE".

2) Personal home stations typically running digipeater duty alongside other activities (such as being an APRS client and/or Internet gateway). This type
responds to the alias call sign "RELAY".

The assumption is that there are far more home stations then wide-area digis. Therefore a mobile is much more likely to be heard successfully by a nearby home station than by a much more distant WIDE. On the other hand, even a minimal home station is likely to have a better and higher antenna system than anything on a mobile. Thus the home station's likelihood of successfully transmitting to even a fairly distant WIDE is much greater than a mobile's. This is especially true for an area situated in a geographic low spot where mobiles have trouble "getting out".

*** How APRS Paths Used ***

A transmission path of "RELAY, WIDE" is requesting the helping hand of nearby cooperating home stations as the first step into the APRS network. [Normally, WIDE digipeaters will also respond to the alias "RELAY" so if a WIDE hears you directly, it can also serve as the first hop.]

If you want multiple digipeat hops, you specify something like "RELAY, WIDE, WIDE". As in conventional packet, each digipeater in the chain "crosses off" the call sign it responded to. This example shows results as a user tries to use three wide area digipeaters in succession. The path string will change like this as the packet propagates from digi to

digi:

RELAY,WIDE,WIDE,WIDE {as sent by the user }

*RELAY,WIDE,WIDE,WIDE {as repeated by the first digi}

*RELAY,*WIDE,*WIDE,WIDE {as repeated by the second digi}

*RELAY,*WIDE,*WIDE,*WIDE {as repeated by third digi)

The path is now "used up" and no further digis will repeat this packet. This kind of path will work with any kind of TNC pressed into duty as digipeaters.

Because all APRS digipeaters use the same generic call signs, the re-transmission process can happen in several geographic directions simultaneously if several digis are within range of the one transmitting. A widening circle of digipeats involving more and more digis on each hop will spread outward from the user in all directions. This phenomenon, known as "UI-FLOOD", is sharply different from the directed linear sequence of digis, each identified by a unique call sign, used in traditional connected packet.

If you know them, you CAN use explicit call signs in APRS paths instead of the generic WIDE. This is one approach to reducing unnecessary retransmissions, especially in your home territory where you know the digi call signs.

In order to shorten the path strings to allow more packets per minute, APRS introduced a new convention. You add a fake "SSID" to the WIDE "call sign" in the path, indicating the number of hops desired. Each digipeater that processes the packet decrements the value of the "SSID" but doesn't cross it off as "used up". When the SSID decrements to zero, further digipeating stops. This type of WIDEn-N digipeating path looks like this for the example above:

RELAY,WIDE3-3 {as the user transmitted it]

*RELAY,WIDE3-3 {after first RELAY digipeat}

*RELAY,WIDE3-2 {after first WIDE digpeat - note WIDE IS NOT crossed off, just changed}

*RELAY,WIDE3-1 {after second WIDE digipeat}

*RELAY,WIDE3 {after third WIDE digipeat -- all used up, no more digipeats}

Note that the path string is half the length of the one before

Sometimes you may want to know what actual digis a signal passed through. The generic call signs conceal the identity of individual digipeaters. To see the actual call signs, you substitute the call sign "TRACE" for "WIDE" Now, each digi will insert it's own (real) call sign

in the path before forwarding it.

The example now looks like this:

RELAY,TRACE3-3 {as the user transmitted it]

*RELAY,TRACE3-3 {after first RELAY digipeat}

*RELAY,*digicall1,TRACE3-2 {after first WIDE digpeat}

*RELAY,*digicall1,*digicall2,TRACE3-1 {after second WIDE digipeat}

*RELAY,*digicall1,*digicall2,*digicall3,TRACE3
{after third WIDE digipeat -- all used up, no more digipeats}

Note that the path string gets longer after each digipeat. Normally, TRACE is only used for testing and discovering the APRS environment in a given location; not for routine use.

[Actually I have simplified the path examples for purposes of discussion. In reality, the very first WIDEn-N digi (but no subsequent ones) is supposed to insert it's own real call sign (marked as used) into the path in front of the WIDEn-N phrase before forwarding it. This allows users many WIDEn-N digi hops away to determine the general location the packet originated from.]

Note that these advanced paths require that the "call sign" actually be changed by each digi that processes it. This process of "call sign substitution" is unique to APRS and requires special APRS awareness in TNCs. Currently only the Kantronics KPC3+/KPC9612+, and TNC2 clones with UI-DIGI firmware, can do this "standalone" without a computer attached).

Increasingly, as APRS grows, WIDEn-N digipeating is becoming the standard everywhere. However, some areas are still covered by older "dumb" digis using pre-APRS-aware TNCs. [The sole advantage of traditional WIDE-only mode is that any 20-year-old junker-clunker hand-me-down TNC can do it.] In these areas, you will be forced to use the longer, less-efficient WIDE,WIDE,WIDE type of path.

As a traveler outside of your home area, you may not know whether WIDE or WIDEn-N digipeating is in use in a given area. This is especially true of simple trackers that transmit but don't receive -- you have no way of monitoring what the locals are using. Even if you do know, you may not have the means (computer and configuration program) with you, to reprogram your tracker to the correct path.

A good compromise path for travelers into "terra incognita" is RELAY, WIDE, WIDE2-2. In areas with dumb digis you will get two hops - dumb digis will ignore the "call sign" WIDE2-2. In areas with smart WIDEn-N digis, you get up to 4 hops - smart digis WILL normally respond to the non-SSID'ed "WIDE" as well as to WIDEn-N.

I can be emailed at: You will need to type my email address into your email software.

2897. Re: [EastTNAPRS] APRS paths

Yahoo group: EastTNAPRS
Date: 2007-05-28 13:01:16 UTC
From: William McKeehan
Topic: 2895 Message: 2897

I'm not sure how old that message is, but over the years, APRS paths have changed a great deal.

The latest push by WB4APR (and adopted by a wide range of digi owners) is to totally eliminate RELAY and WIDE. If you go to Memphis (and many areas) and run a path of RELAY,WIDE,WIDE2-2, your packet will get zero digipeats.

By the way, if you happened to be in an area (such as our area) where you were able to get something to digi on the RELAY and WIDE portion, that path would have your packet going 4 hops. In my opinion, that is an excessive path. Assuming the frequency was quite when you sent a packet out with that path, your station would be seen in Southern GA, West TN, East NC, and up into Indiana and Ohio. The biggest problem with a path that long is that the more hops a packet goes, the less reliable it is. So if someone tried to send you a message, odds are it would take a lot of retries and would occupy a lot of available RF.

See WB4APR's page: http://web.usna.navy.mil/~bruninga/aprs/fix14439.html for more discussion about these topics.

> digi:
>
> RELAY,WIDE,WIDE,WIDE {as sent by the user }
>
> *RELAY,WIDE,WIDE,WIDE {as repeated by the first digi}
>
> *RELAY,*WIDE,*WIDE,WIDE {as repeated by the second digi}
>
> *RELAY,*WIDE,*WIDE,*WIDE {as repeated by third digi)
>
> The path is now "used up" and no further digis will repeat this packet.
> This kind of path will work with any kind of TNC pressed into duty as
> digipeaters.
>
>
> Because all APRS digipeaters use the same generic call signs, the
> re-transmission process can happen in several geographic directions
> simultaneously if several digis are within range of the one
> transmitting. A widening circle of digipeats involving more and more

> digis on each hop will spread outward from the user in all directions.
> This phenomenon, known as "UI-FLOOD", is sharply different from the
> directed linear sequence of digis, each identified by a unique call
> sign, used in traditional connected packet.
>
> If you know them, you CAN use explicit call signs in APRS paths instead
> of the generic WIDE. This is one approach to reducing unnecessary
> retransmissions, especially in your home territory where you know the
> digi call signs.
>
> In order to shorten the path strings to allow more packets per minute,
> APRS introduced a new convention. You add a fake "SSID" to the WIDE
> "call sign" in the path, indicating the number of hops desired. Each
> digipeater that processes the packet decrements the value of the "SSID"
> but doesn't cross it off as "used up". When the SSID decrements to zero,
> further digipeating stops. This type of WIDEn-N digipeating path looks
> like this for the example above:
>
> RELAY,WIDE3-3 {as the user transmitted it]
>
> *RELAY,WIDE3-3 {after first RELAY digipeat}
>
> *RELAY,WIDE3-2 {after first WIDE digpeat - note WIDE IS NOT crossed off,
> just changed}
>
> *RELAY,WIDE3-1 {after second WIDE digipeat}
>
> *RELAY,WIDE3 {after third WIDE digipeat -- all used up, no more
> digipeats}
>
> Note that the path string is half the length of the one before
>
> Sometimes you may want to know what actual digis a signal passed
> through. The generic call signs conceal the identity of individual
> digipeaters. To see the actual call signs, you substitute the call sign
> "TRACE" for "WIDE" Now, each digi will insert it's own (real) call sign
> in the path before forwarding it.
>
> The example now looks like this:
>
> RELAY,TRACE3-3 {as the user transmitted it]
>
> *RELAY,TRACE3-3 {after first RELAY digipeat}
>
> *RELAY,*digicall1,TRACE3-2 {after first WIDE digpeat}
>
> *RELAY,*digicall1,*digicall2,TRACE3-1 {after second WIDE digipeat}
>
> *RELAY,*digicall1,*digicall2,*digicall3,TRACE3
> {after third WIDE digipeat -- all used up, no more digipeats}

>
> Note that the path string gets longer after each digipeat. Normally,
> TRACE is only used for testing and discovering the APRS environment in a

2898. New poll for EastTNAPRS

Yahoo group: EastTNAPRS
Date: 2007-05-29 20:57:46 UTC
From: EastTNAPRS@yahoogroups.com
Topic: 212 Message: 2898

Enter your vote today! A new poll has been created for the
EastTNAPRS group:

Should we continue the Sunday Night Net?

o YES!
o If you want to.
o Yes, but let's change the date/time
o No.

To vote, please visit the following web page:
http://groups.yahoo.com/group/EastTNAPRS/surveys?id=1856693

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

2899. Sunday Night Net

Yahoo group: EastTNAPRS
Date: 2007-05-29 21:01:21 UTC
From: William McKeehan (KI4HDU)
Topic: 348 Message: 2899

Well, it's time once again for me to re-evaluate the Sunday Night nets.

Lately, there has not been nearly as much participation as there was a year ago. Check-ins are down to a handful and the number of questions has been very minimal.

So the poll is open...vote and let me know if you still see value in the Sunday Night net.

William,

I have been checking into the net when I have opportunity. I find the discussions very informative. My participation is limited to monitoring and tracking events due to recent health considerations. Perhaps the Sunday evening net could be retained on an ad hoc basis in support of area events.

Hi everyone,
Although I am guilty of not showing up on sunday night nets very
often , it seems to me that the net is such a valuable source for help
and information that it would be a shame for it to end. The net seems
thrive most when someone is first starting to set up aprs. Summer sees
a drop in net check-ins on every net I have listened to. Everyone on
here and on the net has helped me so much and I would like to know that
the same kind of help would be there for the next person thinking about
getting into running aprs.
thanks, Jay
KI4MZG

2903. UTARC UX-14 balloon launch 6/9/07

Yahoo group: EastTNAPRS
Date: 2007-05-31 13:04:18 UTC
From: William McKeehan
Topic: 2903 Message: 2903

FOR IMMEDIATE RELEASE
May 29, 2007

Who: University of Tennessee Amateur Radio Club (UTARC) and the Radio Amateur Club of Knoxville (RACK)
What: UTARC UX-14 High-Altitude Balloon Launch
When: Saturday, June 9, 2007 - Time: 9:30 AM Eastern Time
Where: Knoxville Hamfest and Electronics Exposition, Kerbela Temple, 315 Mimosa Avenue Knoxville, TN
Why: Demonstration of technology used to launch and recover high-altitude balloons as well as to videotape flight for replay later at the Hamfest if recovered in time.

The University of Tennessee Amateur Radio Club (UTARC) in cooperation with the Radio Amateur Club of Knoxville (RACK) will conduct a high-altitude balloon launch on Saturday, June 9, 2007 during the 41st Annual RACK Hamfest at the Kerbela Temple in Knoxville, Tennessee. Launch is currently scheduled for 9:30 AM Eastern Time.

The payload, nicknamed ?Eye in the Sky? will contain a video camera that will record the entire flight from lift-off to landing and recovery. This payload is planned for return to the Hamfest in time for replay to the attendees.

Along with a video camera, a 2-meter transceiver and 70cm beacon will be placed on board for tracking in real-time. A GPS receiver will provide telemetry to the transceiver and to an APRS (Automated Position Reporting System) controller that will send coordinates back to ground stations working to intercept and recover the payload after its decent from altitudes exceeding 50,000 feet (weather and prevailing winds permitting).

ABOUT UTARC: The University of Tennessee Amateur Radio Club is celebrating it?s 60th year of operation. UTARC has been launching high-altitude balloons since May of 2005 and their missions have been featured in Make magazine, or publications and the tech web site Slashdot. This launch will be the 14th balloon launch for UTARC. Their balloon missions have taken them as high as 116,000 feet. The payload radio transmissions have been heard as far away as Vancouver, BC and the Caribbean. This year?s balloon launch will mark the 2nd year UTARC has launched from the Hamfest.

ABOUT RACK: The Radio Amateur Club of Knoxville is celebrating its 41st year of hosting the RACK Hamfest, an annual gathering of amateur radio operators and electronics enthusiasts to buy, sell, and trade amateur radio equipment and participate in seminars dedicated to the amateur

radio hobby. The Radio Amateur Club of Knoxville was founded in the 1950s and has served the residents of East Tennessee in times of emergency and public service during its years in operation.

ABOUT THE RACK HAMFEST: The 41st Annual RACK Hamfest and Computer Exposition will be held at the Kerbela Temple in South Knoxville near Baptist Hopsital. This year?s hamfest marks the 2nd consecutive year that the hamfest has been held at Kerbela Temple. Along with the hamfest, the Tennessee section of the American Radio Relay League (ARRL) will conduct its state convention at this year?s event. Various forums including demonstrations of satellite communications, astronomy, HF communications, and youth activities are scheduled.

More information on the web:
UTARC: http://www.utarc.org
RACK: http://w4bbb.org

For additional information, please contact Greg Williams, UTARC, at 865-588-9252; or David Bower, Hamfest Director, at 865-690-8360 (e-mail at d.bower@...)

Greetings all! We would respectfully ask that you pass the word via email, radio netss, BBSs or by other means about the upcoming 3rd Annual MCARC Athens Tennessee Hamfest on July 21st. Thanks for your help, and info appears below!
Scott Duckworth, NA4IT

3rd Annual MCARC Hamfest
Sponsored by The McMinn Co Amateur Radio Club &
Athens City Parks and Recreation. An ARRL sanctioned event.

WHEN: July 21st, 2007, 7:00AM-12:00 Noon (canceled if rain)
WHERE: Athens Regional Park, Athens, TN
WHAT: Outdoor Amateur Radio Trader's Fest
TALK IN: 145.310 (-) 141.3 WA4PNI repeater

Directions: Take exit 49 off I-75, turn east towards Athens, TN.
Go approximately 1 mile. Athens Regional Park will be on your right.
Follow the signs to Hamfest area.

LIMITED UNDER ROOF SPACES! $10 EACH

TAILGATE SPACES $5 EACH! BRING YOUR OWN TABLES!
DEALERS MAY ARRIVE AT 6:00AM TO SETUP!
ALL SETUPS MUST BE AMATEUR RADIO RELATED! NO FLEA ITEMS!

ADMISSION FREE TO BUYERS!

BREAKFAST FOR SALE (BISCUITS, COFFEE, ETC!)
FROM 6:30-10:00AM BY THE MCARC WOMEN'S AUXILARY!

CAMPING, MOTELS, RESTAURANTS, ATTRACTIONS, STORES NEARBY

CONTACT NA4IT, SCOTT DUCKWORTH (423)263-1989 OR EMAIL kg4fzr@... or
visit www.mcminnarc.com FOR INFO OR TO RESERVE SPACES.

2914. Fwd: Potential APRS PCs?

Yahoo group: EastTNAPRS
Date: 2007-06-07 13:51:06 UTC
From: William McKeehan
Topic: 2914 Message: 2914

That $199 Eee PC sounds very interesting - that would be ideal for me I think.
The Palm Foleo looks interesting, but at $499, I would probably just get a
regular laptop.

Watch for word wrapping in the URL's below.

What are the differences in the TT3 Firmware and the SOTT Firmware? Is there a website that discusses the SOTT?

There is a tinytrak yahoo group and the source files for SOTT are there. I think the guy who designed the Tinytrak 1 wrote the software. The 16f628 is made by Microchip. They do free samples on this chip and others. The original Tinytrak used a 16F84A Later models use the 16F628A, but there is some features different between the 2 versions, Sonething to do with Mic-e . To buy the 16F628A, the cost is around $3 to $4 dollars for the chip.

Last night I burned the old version of SOTT to a 16F84 chip. I am
running it this morning as KG4UJC-4. I have most of the parts to
build a tinytrak from scratch. The only part I don't havean exact
replacement for the the 10mhz ceramic resonator (crystal) for the
microcontroller. I have some 4mhz and 20mhz. I can build with on of
those and see what happens. If they don't work, then I'll order some
10mhz ones.

2923. New Digi

Yahoo group: EastTNAPRS
Date: 2007-06-13 18:36:31 UTC
From: Roy Pollard
Topic: 2917 Message: 2923

We have a NEW digi KE4OTZ-7 WideN-N and TnN-N.

Hopefully the new digi will improve the coverage in Blount County and the surrounding areas.

Many thanks to all our Digi Owners/Operators for their needed service.

Roy

This is very good news. I hope that the digi will provide much needed coverage in Monroe county and the South end of Blount County.

Thanks for the work Tim and Roy!

If anyone else is interested, I think digis could be well used in the Campbell/Claiborne/Union county area and one in Cocke county.

2927. IRLP/APRS package almost ready

Yahoo group: EastTNAPRS
Date: 2007-06-16 04:41:18 UTC
From: Ed Dial
Topic: 2927 Message: 2927

I’ve replaced all the damaged hardware that I have found, and am currently loading the software and OS on the new hard drive. If everything comes up OK (I can’t fully test everything until I get the software up) I should have the node ready for the hill by next week (maybe the week after considering Field Day).

I don’t think these mini-itx boards were meant for hostile environments.

In case anyone is new to the group, this is the WA4RYW-7 digipeater and the 5700 IRLP/Echolink controller for East Tennessee.

Looking at the packets from KG4UJC-2 for the last 30 hours or so, I see you at first up in what looks like the BSF area, then things seemed to go crazy. The data is reporting that you were traveling at 463mph, 664mph and 916mph with positions around Cleveland, TN then south of Dalton, GA.

The packets are all Mic-E packts, which could be corrupt or the Tracker that you are using could be generating bad packets..

I think I know what happened. The 9v battery running the tinytrak pcb
got weak. It metered 7.2 volts with no load.

916 MPH! ..... and pulling a camper. No bad!

I will have some 10 mhz resonators for building a clone on the
tinytrak come in this week. I'm also looking in to a gps modual that
is said to be "hacker friendly". It outputs nmea format.

There may be some overlap in coverage (as there is with W4ACA), but both digi's will cover different areas - for example, I can't hear or be heard by KE4OTZ-7 but I can by WA4RYW-7 and sometimes W4ACA. I do not think the overlap is significant, but only testing will show.

I think a digi in the Claiborne County area would be a great addition to the area...I'll do what I can to help that effort.

2940. Cherohala Challenge

Yahoo group: EastTNAPRS
Date: 2007-06-18 20:33:09 UTC
From: Jay
Topic: 2940 Message: 2940

My wife, ki4ofi and myself helped last saturday with the Cherohala Challenge. This was our first time helping with an event like this and we just wanted to post some of our afterthoughts. We were located at the rest stop at the Tennessee, North Carolina state line on US-129, everything worked almost flawlessly. We found two meters voice to be a "challenge" from that location but aprs worked perfect. At one point I had to restart computer and was without aprs for about ten minutes or so and during that time I realised how much aprs helped me see just what was happening. Without it I felt blind but with it I could, at a glance see everything that was happening.
I didnt get a track on the day, I would love to see that. during my tests on thursday before the ride I found n4neq-3 was the only station of use in the area I was going to be during the ride , but I would like to know what worked Saturday.
We really enjoyed the day seeing what our radios could do, meeting alot of great people and helping out. we're looking forward to the next time.

Thanks, Jay,KI4MZG and Jackie,KI4OFI

2941. Re: [EastTNAPRS] Poll results for EastTNAPRS

Well, this poll leaves me with mixed feelings.

Based on the discussion that happens on the net and the lack of response that I received on this poll, I think the net may have ran it's course.

Does anyone have any suggested topics for discussion on these nets?

Does anyone want to act as the Net Control Station for a few months (or longer) to bring some new life to the forum?

William,
As I have said before I really would like to see the net continue.
Although I know someone else being net control would help you out,
you have devoted alot of effort to aprs in this area, I think the
answer to new life on the net is new people wanting to get involved
with aprs or at least interested in knowing more about it.
As for topics I have about 1,000,000 topics and questions most of
the time but I sometimes get to feeling that I get to being a problem
child ,if you will, always asking dumb questions.
It seems to me the best nets were when someone was on just getting
started and the topics were more down to basics. I would also like to
remind you two weeks ago the net ran till 10 pm.
sugestions; maybe a rotation of the net control duties, all other
nets do
like you keep fishing for, a topic to quickly go over each week if
no one has a question.

maybe some anouncments on other nets during the week with a brief
run down on what aprs is and the net info
aprs seems to be something everyone wants to know about, when other
hams see my station its always the aprs set-up that they want to know
about.
Thanks as always
Jay

I'm glad to hear that you had a good time and saw a glimpse of how much APRS can add to events such as this.

Tell us a bit about your setup. Did you use a laptop or desktop machine? What did you use for a monitor? Did you find you needed to shield the monitor from the sun (if so, how did you do that)? Did you carry a generator up there or was commercial power available or did you run on batteries? Did you use a mobile radio with antenna mounted on the vehicle or an antenna on a push-up pole? etc. Lots of questions as you can tell....

William,

I would not mind being net control on some nights. Maybe something to help promote the group and APRS in the area would be a workshop of some sort. Building some tinytrakers, setting up agwpe and ui-view? As you know, I've been playing with a tinytrak clone design. I just ordered a GPS module for tinkering with. This time of the year nets do slack off some, people on vacation, yard work, loose track of time because of daylight savings time (still 24 hour in a day! Where's the savings?). Hands on stuff might get some new people interested in APRS. Maybe get in touch with the company that makes the tinytrak kits and see if we could get a group discount on a bunch of kits to do a workshop.

From: David Hoffman
Topic: 2940 Message: 2945

This from Angie. I do't believe they are yet on this group, so I passed your email on to them. Here is their reply...

Greetings Jay & Jackie,
I am Angie KG4DSP, Ricks(KF4QVI) better half!!!
I was one of the net controllers for the Charahala ride on Saturday.
Thank-you both so very much for helping out!!!
I would like to invite you to our meeting this coming Tuesday (tomorrow night) at
7:00 p.m. at the Blount county EOC across from Walmart. We will talk about the ride as well as future events that are set to occur in the near future.
Please join us if you can.!
Thanks again,
I look forward to seeing you,
Angie Coffey kg4dsp

I don't normally post to many of the groups that I belong to but, this thread got me excited. I would really like to see a workshop or just someone that would be willing to give a firsthand demo of what APRS is all about. I have a general understanding but have no idea of what kind of equipment is needed or how to set it up.
I live in the west end of oakridge, but would be willing to a short road trip to learn more.
I am in a odd work schedual at the moment but with some time i can usually change it around.

From: Christopher George
Topic: 2927 Message: 2947

Regarding LARC, They already had a digi, it was donated to the club (to Mike Patterson KF4FTD, to be specific) by Rosemary Bowie (She's a Ham, don't remember her call) after Ken Bowie's KC4YDQ's passing, I never saw what the problem was up there except POLITICS!!!! After a few bumbles at the repeater site, by club members unmentioned, the club ended up purchaseing a new digi and antenna for Ken, as they had tore up the antenna and disconnected the coax, with the digi still banging away. And yes this is all fact, as I have first hand knowledge of the facts. I was there whilst all this was going on.

I now stay out of LARC politics, I'm a paid up member till Jan 2010 or maybe it's 2009, I paid ahead, as it is too hard for me to make the meetings any more. I was on the Board of directors for 3 years then Treasurer for 2 years while all this was going on up there. It could be that Rosemary didn't want the digi back up, or at least with the SSID of KC4YDQ-7, I don't remember which it was. More than likey, it was the fact that the Mike & Mike Show (KF4FTD and KF4JOZ) didn't have time to change the E-prom to the new format and change the call. Just a little history of the facts, as I am also the Club Historian and have been so for over 10 years.

All Flames are welcome.

Christopher A. George
KU4LV
LARC Hamfest Chairman/Club Historian

2948. Re: Cherohala Challenge

Yahoo group: EastTNAPRS
Date: 2007-06-19 14:06:34 UTC
From: Jay
Topic: 2940 Message: 2948

William,
When I started to do this event I was going to just use 2 meter and 440 voice then I started looking at what I would need to also run aprs. I picked up an older compaq lap top for $40 and used a deep cycle battery and an inverter for when the lap top battery got weak. I used one of my Icom v-8000 radios and a MFJ sound card interface and ran UIview. I already had a Comet repeater antenna and 20 foot pole so I just made a cheap and easy plywood stand for it and was in business. The radio and sound card interface I ran on another battery. I made a jumper to hook up to my truck in case the battery voltage got low but I never needed it . With everything running at 8:00 am I checked battery voltage at 12.57 V on the radio battery and 12.60 V on laptop batery and at around noon before I started shutting down they read , 12.51v and 12.22V not a bad drop I didnt think for four hours of light use. I was really suprised how easy and smooth everything went .

Thanks again
Jay

I start 3rd shift that weekend, so i dont know how much free time I
will have that i will be awake.
Do you know if anyone is seting up APRS at the red cross in oakridge
or anywhere near the area.

Hello all,

Just to let you know that I have uploaded the interactive weather summary page.
http://home.comcast.net/~actnares/html/ETweathersummary.htm

Currently the page is set to Auto Refresh every 5 minutes.

I am working on a couple of versions of the base page but I wanted to get this out for public viewing to get some feed back on it. The new page will refresh individual sections at different rates but this is still in the testing phase. I am also working towards a APRS station under lay map for the weather radar but that is still a little away at the moment.

Please feel free to let me know what you think about.

The gps module came today. Playing with it now. I'll let the group know how it works. I also got the 10 mhz resonators today for the tinytrak clone. That resoled the communication problems with the board.

Question for you... which do you like better?

The old one http://home.comcast.net/~actnares/html/ETweathersummary.htm

or the new one I am playing with now
http://home.comcast.net/~actnares/test/ETweathersummaryreva.htm

BTW, feel free to pass this around up there... If enough people like it I can make version that has the radar links closer to you area for people to see and us...

Reminder from: EastTNAPRS Yahoo! Group
http://groups.yahoo.com/group/EastTNAPRS/cal

Summer Solstice 8k
Saturday June 23, 2007
6:00 pm - 10:00 pm
Location: Mill House Restaurant in Walland

Notes:
Contact Rick, KF4QVI at charter dot net, if you would like to help out.

This years race will be held on Saturday, June 23rd, at 6:00 p.m. from the Mill House Restaurant in Walland, TN. It's been fantastic having you out on the course in the past, particularly to monitor where the runners have been located on the course. As in years past, anyone supporting this event will be treated to our post-race barbeque dinner!

2965. Sunday night net

Yahoo group: EastTNAPRS
Date: 2007-06-26 13:07:31 UTC
From: Jay
Topic: 469 Message: 2965

Hi everyone,
I was just wondering how hard would it be to do an entire net
using nothing but aprs message. I see alot of two party exchanges
on aprs but never seen a group of say 6-8 atempt to chat as a group.
Would it work if it had to? Whats your thought?
Thanks, 73 Jay KI4MZG

2968. APRS station for sale

Yahoo group: EastTNAPRS
Date: 2007-06-27 02:23:14 UTC
From: ke4cqw
Topic: 2968 Message: 2968

Hi all,

The HF bug has really taken hold of me now.... LOL

With that being said I looking to sale one of my APRS stations.

☐æ Complete APRS Station
a) Yaesu 2200 2 meter FM mobile with microphone & manual
b) AEA PK 96 TNC with DC wall plug
1. With Wiring for radio interface to radio and computer (LESS
USB adapter cable)
c) Dell LS 400 Pentium 3 Laptop
2. 16 gig hard drive
3. Windows 2000 Pro
4. 128 meg of ram
5. AC power cord
6. Fully functional battery @ 3 hour of usage on battery powered
operation
7. Leather computer carrying case
8. Car mountable laptop stand

I am asking $200 for the whole thing as is, I do not want to split it
up.

I can be reached at etskywarn@... or 865-934-7503 for more
information.

Thanks alot, 73 Moe

It's funny you should say that about the HF bug, Moe. I came home from Field Day on Sunday evening and set the FT-817 up that I have. I was still hearing callsigns in my sleep that night. I've been tuning around on that radio every night since.

David;

A 75 Meter link would have been very useful
between the two Net Control Stations
on the Cherohala Challenge.

It would be interesting to try.

The biggest issue that I see that would prevent this from working is that there is no easy way to send a message to "all" via APRS.

You can send a bulletin. I do that with every net to announce the net starting, check-in time and net close.

I guess you could also send to a "message group" and everyone would need to be setup to receive messages to that group.

I don't think there's an "ack" mechanism for multiple recipients using either of the above methods, so it would be hard (impossible) to know who (if anyone) had received your message.

In the past, I've tried using bulletins to send out announcements that were made during the net and I've tried to use APRS to collect input for discussion topics, etc.

If you have some ideas on how this may be accomplished, I'm more than willing to give it a try.

2975. Re: Sunday night net

Yahoo group: EastTNAPRS
Date: 2007-06-27 13:55:36 UTC
From: Jay
Topic: 469 Message: 2975

I just thought net control could send everything out as an
anouncment message on a very generic path so the most people would
recieve it then those on the net reply using a path out of there area
that would lead to the same wide range coverage directed to net
control. We would maybe have to forget about acks.
It seems to me that this would not just be fun but would be a good
chance to see how well we could use aprs in a real emergency and keep
everything running smooth. As most net questions or comments would
excede a single aprs packet net control could asign a symbol, such
as "*" or "#" to place at the end of your comment so net control and
everyone would know your finished. This would help stop over lapping
messages . Kinda a "roger symbol" lol.
Anyway these are just thoughts to ponder, thanks everyone.

2976. path poking

Yahoo group: EastTNAPRS
Date: 2007-06-27 19:43:00 UTC
From: David Hoffman
Topic: 2976 Message: 2976

I was poking around looking at the APRS activity in the Chattanooga area
and spotted this:

K4KR-2>APT311,W4KCO-3,WIDE1,WIDE2,WIDE2,WIDE2,WIDE2,KY,WIDE3*,qAO,WA4YYM:/233629h3452.51N/
08516.24W>167/042/A=000711

What a path! Here's a couple more:

K4KR-2>APT311,W4KCO-3,WIDE1,WIDE3,WIDE2,WIDE2,TRACE,KY,WIDE2*,qAO,WA4YYM:/053317h3451.92N/
08516.28W>169/004/A=000679

W4YI-1>APT311,W4KCO-3,WIDE1,NT4UX,W4KCO,WIDE3,WA4KJH,KY,WIDE2*,qAo,KG4FZR-7:/222329h3501.6
7N/08510.80W>277/000/A=000770

These beacons appear to have been around the state and back.

I thought LAW-3 was good for WideN-n and WideN-n was suppose to reduce
dups? So what's with these large paths?

David Hoffman - KE4FGW

It looks like K4KR is someone who does not understand what he's doing or he's trying to figure out a way around the limitations imposed by the newer WIDEn-N digi's which restrict you to using WIDE3-3 at most.

As for the WIDEn-N reducing dups, that just means the same digi will not repeat the same packet.

For example, if you send out a packet using this path:
WIDE1-1,WIDE2-2
and W4ACA hears you direct, he will digi as such:
W4ACA,WIDE1*,WIDE2-2
then KE4OTZ-7 will hear it and digi it back as:
W4ACA,WIDE1,KE4OTZ-7*,WIDE2-1
Then W4ACA will hear that packet from OTZ, but will not digi it again.

Under the old system, that path would be similar to RELAY,WIDE,WIDE; with this old path (assuming all digis were still old style), then W4ACA would digi again on that last WIDE, so it would go something like this:
RELAY,WIDE,WIDE
W4ACA*,WIDE,WIDE
W4ACA,KE4OTZ-7*,WIDE
W4ACA,KE4OTZ-7,W4ACA*

That's my understanding anyway.

That makes sense. And with these types of paths, that's why this beacon
gets so far and is digi'ed by so many. wow.

2979. WX Alerts via APRS

Yahoo group: EastTNAPRS
Date: 2007-06-29 13:24:34 UTC
From: William McKeehan
Topic: 2979 Message: 2979

All,

Over the past week, we have had an opportunity to evaluate how WX warning/alerts are being IGated from the internet to the local area and how well they are propagated in the local area.

The first thing that I noticed was that the WX warnings that I was IGating out (using the path of via WA4KJH-7) were not getting digipeated by WA4KJH-7 at all. I checked my station and found that it was able to reliably communicate with and get digipeated by WA4KJH-7 for everything except these WX warnings.

So I disabled my system from IGating all WX warnings.

After doing so and listening, I have found what I believe to be the reason that my packets were not getting digipeated.

There are at least two other stations in the area (which WA4KJH-7 can hear) that are IGating these WX warnings to RF. The two stations that I have seen are not using any path.

I believe that the result is that only stations who hear one (but not both) of these two direct gets the WX warnings. Since WA4KJH-7 heard both of them and mine (at approximately the same time), WA4KJH-7 does not hear any of the 3 clear enough (it's just like a double on a voice repeater) to digi them.

What we need to do is coordinate these gating activities; this coordination is part of the purpose of this group.

Once WA4RYW-1/7 goes back on-line, that IGate should be the ONLY one to IGate these WX warnings. Until then, we need to decide who is going to be the ONE to IGate these WX warnings and we need to make sure that whoever does it uses a path that gets the message out to a wide enough area.

Thoughts?

Last night's net was light again.

7 check-ins, 3 via APRS message.

Announcements:
- Carter Mill 10K run, Saturday July 7; contact David Hoffman, KE4FGW if you are interested in helping.
- MCARC Hamfest, Saturday, July 21; www.mcminnarc.com for more information

---------- Original Message ----------
Subject: [aprssig] Great Plains Super Launch - July 6/7, 2007
Date: Mon, July 2, 2007 1:15 pm

The seventh annual Great Plains Super Launch will be held in Grand Island, Nebraska, on July 6 and 7, 2007. This gathering of amateur radio high altitude balloon enthusiasts will feature a launch of around 10 APRS-equipped balloons on Saturday morning at around 8am CDT (1300 UTC).

In addition to APRS, the flights will include ATV, simplex repeaters, CW/voice beacons, and possibly SSTV. Frequencies from 20m to 2.4 GHz will be in use. A PSK31 beacon will be on 14.065 MHz, so distant reception reports are encouraged. We hope to have Igate coverage for all three 2m APRS frequencies.

All the details, including frequency assignments, are at http://www.superlaunch.org .

I run a path of Wide1-1,Wide2-1 in my mobile in the Maryville &
Knoxville area and it
works very well for me.

2991. Carter Mill 10K APRS data

Yahoo group: EastTNAPRS
Date: 2007-07-10 19:32:23 UTC
From: David Hoffman
Topic: 2991 Message: 2991

I was looking at some of the APRS data recorded from my APRS station in the Carter Mill 10K event and discovered that I actually had some beacons from one of several of the balloon flights from the Great Plains Super Launch in Grand Island, NE. That's more than 850 miles away. Did anybody else receive any data from any of the balloon flights this past weekend as well?

David Hoffman - KE4FGW

```
Compare the lines below for N9XTN-11 with what's on findu:
http://www.findu.com/cgi-bin/raw.cgi?call=N9XTN-11&start=120

These below look like they are being IGated to RF by KF4ERV.

Topic: 3002 Message: 3005

Hello Stephen, welcome to the group.
Just this summer I got to help out on a bike ride and really learned
alot about going mobile with aprs. I really enjoy aprs and have found
alot of great people here, always willing to help me out . Looking
forward to seeing more from you .

Ten years ago today I registered aprs.net. For a week or two before that I had been testing APRServe, with consolidated data from San Francisco, Atlanta, and Miami, but the switch over to aprs.net marks the official birthday of the APRS Internet System. What a decade it has been! Thanks to all the (far to many to name) hams whose contributions have grown the system to what it is today.

3008. The 'period' on repeater objects within APRS

Yahoo group: EastTNAPRS
Date: 2007-07-18 14:17:33 UTC
From: David Hoffman
Topic: 3008 Message: 3008

It doesn't look like the period will be going away on repeater objects. Bob describes the correct way to trasmit these objects in his document titled, "APRS Local Repeater Info Initiative".

http://www.ew.usna.edu/~bruninga/localinfo.html

The problem with the period in the frequency on these objects arises on certain models of the Garmin GPS. Appearently Garmin could not process the period when receiving waypoints from the D700 to display on the GPS. What this would do is cause a popup a dialog box on the GPS and freeze until answered. The GPS would wait for it's user to answer the dialog box which essentially 'locked' up the GPS making it useless until answered. Not all Garmin models are effected by this. Looks like Garmin may have corrected this issue later on with it's software.

David Hoffman - KE4FGW

Please copy this to the District list.

District 7 Skywarn Team,

The arrangements are still incomplete for the Funeral of Mark Coley N4XTZ. The family is in need of 1,600.00 before any arrangements can be made. If you would like to make a donation on behalf of the Skywarn team, please contact Brandon Monroe the District Coordinator for directions. I will contact Morris Baker Funeral Home and set up an account for donations. Any donations will be paid to the funeral home directly. Please do not send donations directly to the team.

Thanks for the help.

Brandon Monroe
District 7 Coordinator

3012. WB4APR in East Tennessee

Yahoo group: EastTNAPRS
Date: 2007-07-20 18:03:43 UTC
From: Don E. Robinson MD
Topic: 3012 Message: 3012

BTW,
I wonder if anyone else besides me had the chance to talk with Bob Bruninga WB4APR (the father of APRS) as he traveled through East Tennessee last weekend (SUN) ? I had noticed that he was in Nashville earlier in the day, then talked with him as he was going up I-81 north of Knoxville. He had sent out a bulletin asking for repeater info and I responded via APRS and then we connected over the 34/94 machine. He was extoling the virtues of the new Kenwood D-710. The Kenwood people (at Dayton) were hoping that the new rig would roll out at the national ARRL convention at the Huntsville Hamfest, but I have not seen any official announcement to that effect. Bob also wanted people to put frequency information in their status text so voice communication can be facilitated between stations.

He did manage to check-in to the EastTNAPRS net Sunday night, so we got to chat very briefly.

So the D710 is a replacement for the D700? I've not seen any details about it yet. Did Bob have any details about the D710?

When these objects are received, does the GPS stop sending position information to the D700? or does the display just "pause" and wait for you to press enter?

I got to have Bob and his wife as guests at my house on Wednesday as he headed south. He had forgotten a bag at a motel here in Dandridge on a previous trip, and he had looked me up on APRS and asked me to pick it up and hold on to it for him.

Got to see the D-710 in operation, and I would have to say it is very very slick. I'm seriously considering getting one when they are released.

Hello to the Group
As some of you know I'm just getting into APRS.
I have a 706MkIIG I managed to get up and running.Using a Kantronics
kpc3 +.

The big problem is I also have a Icom 746 (non-pro) I cannot get it to
transmit a packet tone.All it will do is transmit a dead carrier.
I have sent CAl tones from my 706 and listened to the tone it sends.
What comes out of the 746 is nothing like that.I am using a second
kpc3+ for this radio
Please if anyone can give me any tips.

3019. Re: [EastTNAPRS] HELP !!! Icom 746 and Aprs

Stephen;

On my 746Pro it has both FM and FM digital modes.
Also SSB & SSB Digital modes these modes affect how the 6 pin
data connector signals are handled..

So check & see if you also have digital modes if you are using the 6
pin data connector.

Roy thank you for your reply.
No the 746 non pro doesn't have digital modes as far as I can figure.
I rewired the cable to the radio from TNC and now at least I can
recieve Packet tones.However I lost transmit. The TNC xmit light
comes but will not key radio.I'm running out of possible combo,s to
wire it.I will take any and all suggestions from any and all TNX

I got to have Bob and his wife as guests at my house on Wednesday as he headed south. He had forgotten a bag at a motel here in Dandridge on a previous trip, and he had looked me up on APRS and asked me to pick it up and hold on to it for him.

Got to see the D-710 in operation, and I would have to say it is very very slick. I'm seriously considering getting one when they are released.

Chris
K4MGY

I have talked to him before at Dayton Hamfest and e-mailed him, but had never worked him on the air. Quite a thrill to work the inventor of my favorite mode in ham radio.

> it
> yet. Did Bob have any details about the D710?
> --
> William McKeehan

Several embellishments to the D-700 mostly on APRS side. Also allows input
from the ARRL Travel Plus for Repeaters to load repeaters, PL tones etc when
you are planning a trip. See the back of the latest QST for a look at it.
May be available at the Huntsville Hamfest!

From: rickycarnes2001
Topic: 3012 Message: 3026

I got to talk with Bob just as he was getting on I81. We talked a few minutes. Discussed his new radio and the packet it was sending. His new radio also displays what frequency he has his second frequency set on. Like we were on 146.940, that is what was sent out on APRS along with his question for the local repeater freq. Sounds like it is going to be an improvement on the D700.

---------- Original Message ----------
Subject: [aprssig] SiRF Star III receivers for $50
From: "Scott Miller" <scott@...>
Date: Tue, August 7, 2007 5:27 pm

The new SiRF Star III-based receivers from Deluo work great - they're way more sensitive than the older Sony units - but apparently the factory screwed up on the latest shipment and put male mini-DIN connectors on them rather than female.

This means that they won't work with any of the adapters, but the receivers are still perfectly good. I've got around 50 on hand right now, and instead of shipping them back for rework I negotiated a price reduction on them and I'm selling them at the discounted price of $50 each.

If you don't mind a little soldering to get it to a usable connector, this is probably the best deal you're going to find on these things. For tracker purposes, you can wire up a female DB9 with green -> pin 2, red -> pin 4, and black -> pin 5.

If you're one of the few customers that got one of these before the mistake was discovered, let me know (and include your order number) and I'll give you a credit for the price difference.

The Tater Valley Pedal Masher
Saturday September 8, 2007
All Day
(The next reminder for this event will be sent in 8 days, 23 hours, 49 minutes.)
Location: Washburn school in Washburn TN

Notes:
The Tater Valley Pedal Masher is planned for Sept 8th 2008. Anyone is welcome to help, but having a portable / mobile APRS system would greatly add the event in communications and tracking.... the ONLY requirement is a 2 meter radio to work communications.

The race will start and end at Washburn school in Washburn TN, Please see http://www.knoxrevolution.com/century.htm for more information.

If you are interesting in working as a SAG or as a fixed rest stop station please let me know via my direct email at n4cqw@...

Jay;

Yes.

The map can be calibrated with points near the upper left and lower right corners of the map.

Your accuracy can be checked by comparing a point near the center of the map as it is
displayed by Ui-view with its known location.

The Tater Valley Pedal Masher
Saturday September 8, 2007
All Day
Location: Washburn school in Washburn TN

Notes:
The Tater Valley Pedal Masher is planned for Sept 8th 2008. Anyone is welcome to help, but having a portable / mobile APRS system would greatly add the event in communications and tracking.... the ONLY requirement is a 2 meter radio to work communications.

The race will start and end at Washburn school in Washburn TN, Please see http://www.knoxrevolution.com/century.htm for more information.

If you are interesting in working as a SAG or as a fixed rest stop station please let me know via my direct email at n4cqw@...

3049. Boy Scout Raft Race on the Hiawassee River

Yahoo group: EastTNAPRS
Date: 2007-09-09 03:20:09 UTC
From: Dewayne Siddon
Topic: 3049 Message: 3049

On Saturday, Sept 15.

I have been advised that there are 43 rafts that will be on the river Saturday afternoon. The river event starts at 1:00 pm and will begin at Reliance, TN and end near US higway 411. We need several more volunteers to help track these rafts and also to help with setting up a demo station after the raft event. For the demo station(s) we need to present a good overall view of what ham radio can do, long distance communications and local. HF, ARPS, and possibly Echolink or IRLP if a node is accessible from the campground. If you would like to help with this on Saturday afternoon, please let me know as soon as possible.

Thanks,
Dewayne Siddon
KE4IDH

Sorry about the net last night.

I had something come up yesterday afternoon and I was unable to be around a radio at net time and given the short notice was unable to arrange for someone else to take the net.

See you all next week.

3056. Re: [EastTNAPRS] Boy Scout Raft Race on the Hiawassee River

Yahoo group: EastTNAPRS
Date: 2007-09-10 15:24:39 UTC
From: Carl Siddon
Topic: 3049 Message: 3056

David, thanks for offering.

The event starts at 1:00 pm on Saturday on the Hiwassee river between Reliant, TN and highway 411.

We will be tracking the rafts as they go down the river. They have also asked for a demo station to be set up at the campground for a while after the river event.

I have surveyed the site using Google Earth and yesterday drove along both sides fo the river. There are many good observation spots and the APRS signals seem to be getting into and out of the area fairly well. I have the ability to set up a temporary mobile digi if needed.

The 147.18 repeater is on the mountain just above the river and and also seems to not have a great many dead spots along the way.

My thougts are that we would set up a 'tracking command post' type situation, probably near Highway 411. This would have and APRS tracking display as well as two way APRS communications if needed. Also, we would be using the 147.18 repeater for voice. The APRS tracking would be very useful so that we would not have to guess at where the report was coming from. This would be via 2 Meters on a land based station. I would not want to risk a station by placing it on a raft.

The river event is sheduled to be over by 5 pm. If I get enought equipment and power, I will set up a low powered demo station with APRS for demo as well as HF, VHF/UHF.

Our LIfe Force helicopter dispatch has been known to monitor amateur repeaters and APRS data during past events when we have had need for their respose, so I plan to give them a heads up about the event later today or tomorrow.

I hope you can help out, Right now, I really need at least 3 more.

Thanks,

Dewayne, KE4IDH

Well chances are very good right now that I can help you all out. A temporary digi could be setup along River Road near the bend in the river, just south of Spring Creek Rd that could look out at Hwy 411 through the mountains and also look in the direction of Reliance, TN.

I have complete temporary digi equipment, APRS radio and portable power that I can use as well. So stick me where ever I can help out at.

Thanks, and I will add you to the list. Right now I'm not sure that we will need a temporay digi, but if you want to bring it just incase, please do. The spot that I found on Spring Creek Rd was near where the railroad and Power lines cross the road.

Thanks again,

Dewayne, KE4IDH

I had picked a location out just south of there trying to clear the southern most tips of Chestnut Mountain along the banks. This depends of course on where the finish line communications will be located along Hwy 411 there.

I'll just pack whatever I think I'll need in any position so whatever position you give me, I'll be ready for it.

Anything in that general area should work. Anyway, we can choose what works for us that day.

There seems to be a boat ramp driveway at the Highway 411 bridge. I believe that that is where they will come out, but I could be mistaken.

Thanks again,
Dewayne KE4IDH

3061. For sale or trade a TMD-700 Kenwood APRS Radio with a Garmin GPS V mapping gps.

Yahoo group: EastTNAPRS
Date: 2007-09-11 23:08:41 UTC
From: ke4cqw
Topic: 3061 Message: 3061

I have for sale or trade a TMD-700 Kenwood APRS Radio with a Garmin GPS V mapping gps unit.

I would like to sale the Kenwood TMD-700 with the Garmin GPS V for $600 cash (US Postal Money Order) or trade for a Yeasu FT-857 or a FT-857D radio.

The cash package deal will include all the radio components (Microphone, remote head control, mounting brackets with hardware, manuals and cables etc.), the GPS V will include the city source cd and manuals. Also are included are the complete cable harness to interface the gps to the radio, the cable to interface the radio to a computer (for programming) along with a serial to USB adapter cable. To make the whole system more functional I am also going to include the mapping software to make the whole system functional with UI-View 32 which normal has to be purchased separately to make UI-View totally functional with mapping. Buyer will also include 1/2 of the cost for shipping and insurance of the package.

The trade for a FT-857 is the same as the cash deal but I am looking for a high quality radio in excellent shape. It should include all radio components (Microphone, manuals, control head, remote mount if equipped, mounting bracket with hardware and power cord etc). Each will pay shipping and insurance for the package.

The trade for a FT-857D is the same as the cash deal but I am looking for a high quality radio in excellent shape. It should include all radio components (Microphone, manuals, control head, remote mount if equipped, mounting bracket with hardware and power cord etc). Each will pay shipping and insurance for the package. With the D model the DPS 2 and the remote head mount should be included and I am open to discuss additional equipment or cash to make up the price difference in the newer version of the radio

I can be reached at n4cqw@... More information can be found here http://home.comcast.net/~actnares/html/ETd700.htm

Would you believe that one of my all-hazards weather radio falls under this recall? I have done anything yet. The manufacture did send me an email about three weeks ago on this.

From: William McKeehan
Topic: 3 Message: 3077

Guys,

In my continuing effort to help people understand what you may be asked to do when working public service events, I have posted a new file to the groups "Public Service Information" folder in the file section. This file was created by a collaboration with several people with significant input from David, KE4FGW, and Roy, WA4BDS.

Have a look at the file and let me know if you have any questions/comments/updates.

Thanks!

William,

You might want to send these reminders out one day earlier. I subscribe to the daily digest, so I don't see these messages until Monday. I'm not saying that I'll show up every week, but I might check in occasionally if I had the reminders.

73,

Hal Weeden

From: William McKeehan
Topic: 3081 Message: 3081

There is a new version of FindULog to address the recent change in the findu website.

The application can be found at http://welcome.to/uiview

or if you just want the link to download it's:
http://www.apritch.myby.co.uk/findulog102.zip

For those of you who may be unfamiliar with this utility, it is a conversion routine which downloads data for the specified callsign from www.findu.com and creates a log file suitable for playback in UI-View.

3091. [Fwd: [aprssig] APRS at JOTA and other SCOUT events]

Yahoo group: EastTNAPRS
Date: 2007-10-09 19:49:18 UTC
From: William McKeehan
Topic: 3091 Message: 3091

This has implications beyond just JOTA, have a look and play with it.
--
William McKeehan
KI4HDU
http://mckeehan.homeip.net

---------- Original Message ----------
Subject: [aprssig] APRS at JOTA and other SCOUT events
From: "Robert Bruninga" <bruninga@...>
Date: Tue, October 9, 2007 3:43 pm
To: "'TAPR APRS Mailing List'" <aprssig@...>

New for JOTA 2007!

Consider taking APRS to your JOTA scout event this year. We have enabled a global CQ function that will allow any APRS station out in the field, to call CQ to all other similar stations all over the world.

APRS is a two-way tactical real-time communications system. It is an excellent demo that can be interesting to scouts while they are waiting their turn to operate one of the regular HF JOTA stations.

This year, a system called CQSRVR has been written by Pete, AE5PL, which
will receive logons from field stations and turn around and send out those CQ's to all other SCOUTS stations. When they see these, then they can do the normal APRS messaging between individual stations anwhere on the globe that is in range of an Igate.

See the web page:
http://www.ew.usna.edu/~bruninga/aprsjota.html

It is operational now so you can practice. Just send an APRS message to CQSRVR and include the two keywords CQ SCOUTS as the first two words at the start of your message. Remember the limitation that a SPACE character must follow the two words to separate them from the rest of the text of that message. And example might be to send this message to CQSRVR:

CQ SCOUTS CQ from Annapolis, Maryland, USA

Hopefully, all other SCOUT stations will see your message and will respond to your actual call to make the contact.

I have sent this message to scoutradio@yahoogroups already...
But if you know of any other scout and ham radio distribution points, you might consider mentioning it.

Good luck!
Bob, Wb4APR

3097. AA4UT-11 Tracking

Yahoo group: EastTNAPRS
Date: 2007-10-21 03:49:15 UTC
From: Hal Weeden
Topic: 3097 Message: 3097

Try this link for tracking the latest UTARC balloon launch. The time range may have to be adjusted depending on when you look at this. I really like the track it is showing on the screen. Unlike Findu, this link is updating automatically.

http://aprs.he.fi/?call=aa4ut-11&mt=m&z=11&timerange=3600

Subject: [Balloonatics] UAH balloon flights
From: "Jason kg4wsv" <kg4wsv@...>
Date: Tue, October 23, 2007 12:42 pm
To: Balloonatics@yahoogroups.com

Upcoming UAH balloon flights:

UAH Space Hardware Club flight SHC004

Saturday, October 27 (Nov 3 weather date)
Launch at 8:00am central (team meets at 7 to begin launch prep)
primary and backup APRS trackers on 144.390, callsigns KI4ZUW-11 (23 sec time slot) and KI4NML-11 (48 sec time slot)
FM CW beacon KG4WSV on 146.640
payload is imaging, balloon will be allowed to burst (no cutdown)

UAH EE Senior Design, 2 flights

Saturday, November 3

First launch at 10:00am (team meets at 9 to begin launch prep), prep for second launch begins after first balloon is in the air.

All APRS trackers on 144.390. ATV on one paylod (see below). FM/CW beacons may be attached, distribution and frequencies TBD.

Both balloons will contain 2 payloads, one to release early (<20k') one to cut down higher (60k+) payloads are imaging and basic measurements.

A Team
payload Alpha, early release: KI4ZLT-11
payload Omega, second release: KI4ZLW-11

One Team
payload 1, early release: ATV on 434MHz, APRS KI4ZGB-11
payload 2, second release KI4ZGB-12

3100. [Fwd: [aprssig] findU updates]

Yahoo group: EastTNAPRS
Date: 2007-10-24 03:30:21 UTC
From: David Hoffman
Topic: 3100 Message: 3100

For those of you who haven't seen this yet and use findu, you may be interested in this.

David Hoffman - KE4FGW

---------- Original Message ----------
Subject: [aprssig] findU updates
From: "Steve Dimse" <steve@...>
Date: Tue, October 23, 2007 5:11 pm
To: "TAPR APRS Mailing List" <aprssig@...>

Thanks to everyone who contributed to a new hard drive system for findU. After investigating the issues involved in adding a RAID system, it turned out to be far easier and only $1k more expensive to replace the server (Dell had some amazing discounts on servers last month), which is what I decided to do. The new server (8 core Xeon, 8GB ram, 6x146GB 15k SCSI RAID 1+0) is in its co-lo site and being configured and tested now, to be swapped out late this week or next.

As I've said before, there is nothing too difficult about programming findU, the hard part is in setting up and maintaining the servers. findU is literally hundreds of small pieces, and configuring a new server is a hair pulling experience. I'm sure I've forgotten something, so I'd like your help in checking out the new server. To do this, take any www.findu.com URLs you use, and replace www with mangrove, for example

http://www.findu.com/cgi-bin/find.cgi?call=k4hg-8

becomes

http://mangrove.findu.com/cgi-bin/find.cgi?call=k4hg-8&terra=4

If you find something that does not work please email to me off-list.

And if you'd like to contribute to offset the $1k I spent out of pocket, it is most appreciated, use the PayPal link on many of findU's pages. With this new machine, findU has two servers that should be able to handle the load for the next several years.

Thanks,

Steve K4HG

Maybe take a poll and see how many folks have bought the new TM-D710 radio. And if so, is there any one feature that they are really just so happy to have that it does. I guess a poll like this could be done from the Yahoo group. I'm just trying to think of something.

3112. Fox Hunt!

Yahoo group: EastTNAPRS
Date: 2007-11-05 02:20:34 UTC
From: William McKeehan (KI4HDU)
Topic: 3112 Message: 3112

All right guys, let's do another Fox hunt!

Step 1 - GO VOTE
There are 2 polls in this group asking for your choice of date and location for a fox hunt. We have picked the weekend before Thanksgiving of November 17-18 with hopes that this will fit most people's schedule, we just need to know which day. We also have a few locations for the fox to hide and I'd like to see your opinion on that.

Step 2 - SPREAD THE WORD
First, spread the word that people need to vote (even if they are not members of this group, they can join the group just to vote).

The polls will close next Sunday Afternoon and the results will be discussed on the Sunday night net (146.940 at 8PM). If you have something you'd like to discuss about the fox hunt, feel free to ask questions or post comments in this forum.

Once the date/location is choosen, SPREAD THE WORD some more about the event. While I would like to have a vote from everyone that is going to participate, I'd be happy to see several more people decide to join in once the decisions have been made.

Any questions?
Let me know

One other piece of information. November 17 is a UT home game, so down-town Knoxville on that day is probably not an option.

Polls will close Sunday afternoon and we'll discuss the results on the net Sunday night (8PM 146.94).

Date: 2007-11-11 15:16:22 UTC
From: William McKeehan (KI4HDU)
Topic: 3119 Message: 3120

Maybe so.

I picked the areas that I did based on feedback that I received on the Sunday Night Net last Sunday and past projects.

One thought that I have is that just because I'm organizing a fox hunt in the Knox/Blount/Sevier county area does not prevent someone else from organizing one somewhere else. I imagine that there would be enough interest in the Johnson City or Greenville area to have some fun with it and you may get some participants from the Knoxville area to travel up there for the event.

The fox hunts that I have participated in are all about having fun and exploring another aspect of amateur radio. The techniques used for a fox hunt can be used in finding the source of interference (see November's QST, page 82) or finding downed aircraft or a variety of things. If you have a group that really enjoys fox hunting, you may look into competitions in this "sport"; there is a set of international rules (http://www.ardf-r1.org/html/ardf_rules.html)

In doing some Web surfing, it looks like the CQ magazine encourages a fox hunt weekend in May (http://members.aol.com/joek0ov/nfw.html). They mention an aspect of a fox hunt that I did not think much about; you do not have to be a licensed HAM to participate - anyone can listen.

So maybe you can come down and participate in the one in Knoxville, then take that excitement back up to your neck of the woods.

3124. Fox Hunt Details

Yahoo group: EastTNAPRS
Date: 2007-11-12 02:52:00 UTC
From: William McKeehan (KI4HDU)
Topic: 3124 Message: 3124

OK, we've made some decisions

We are having a fox hunt this Saturday, November 17th.
We will have a group meeting at Ft. Dickerson Park @ 1 PM. This meeting is optional, you can start from anywhere. If you are new or inexperience in fox hunting drop by and maybe hookup with some more experienced folks or get some tips before you take out on your own.

The fox will start transmitting @ 2 PM

The fox will be within 5 miles of the Sun Sphere, but not within 1 mile.

Our official coordinates for this center location are:
35°57'41.93"N
83°55'24.22"W

The fox will be in a public location that is accessible via car.
The fox will be on 146.565 MHz and will transmit for a period of time (5-30 seconds) with a random interval between transmissions.

The Hounds will be coordinating on the 443.500 repeater with a PL of 100.

No experience necessary, everyone welcome.

Share the word!

Let me know if you have any questions.

William

35?57'41.93"N
83?55'24.22"W

The fox will be in a public location that is accessible via car.
The fox will be on 146.565 MHz and will transmit for a period of time (5-30 seconds) with a random interval between transmissions.

The Hounds will be coordinating on the 443.500 repeater with a PL of 100.

No experience necessary, everyone welcome.

3126. Fox Hunt, 11/17/2007, 1:00 pm

Yahoo group: EastTNAPRS
Date: 2007-11-16 17:57:21 UTC
From: EastTNAPRS@yahoogroups.com
Topic: 3125 Message: 3126

Reminder from: EastTNAPRS Yahoo! Group
http://groups.yahoo.com/group/EastTNAPRS/cal

Fox Hunt
Saturday November 17, 2007
1:00 pm - 5:00 pm

Notes:
We will have a group meeting at Ft. Dickerson Park @ 1 PM. This meeting is optional, you can start from anywhere. If you are new or inexperience in fox hunting drop by and maybe hookup with some more experienced folks or get some tips before you take out on your own.

The fox will start transmitting @ 2 PM

The fox will be within 5 miles of the Sun Sphere, but not within 1 mile.

Our official coordinates for this center location are:
35?57'41.93"N
83?55'24.22"W

The fox will be in a public location that is accessible via car.
The fox will be on 146.565 MHz and will transmit for a period of time (5-30 seconds) with a random interval between transmissions.

The Hounds will be coordinating on the 443.500 repeater with a PL of 100.

No experience necessary, everyone welcome.

3127. Fox Hunt Results

Yahoo group: EastTNAPRS
Date: 2007-11-19 04:05:21 UTC
From: Hal Weeden
Topic: 3127 Message: 3127

Well, I missed the net tonight. It would have been interesting to hear the discussion about yesterday's fox hunt.

Emily and I enjoyed the hunt. Our very low-tech approach seemed to work much better than I expected. We had a late start, and it took us about two hours to find David.

I was puzzled about what kept sending us to the Whittle Springs Rd/Washington Pike/Edgewood Rd area. I was showing Emily our APRS track on aprs.fi, and switched over to the Google Earth view. It appears our relatively hot spot is in a direct line between David's vehicle, and the gap in Sharp's Ridge that I640 passes through. When our strongest signals were sending us south-southeast, it was the 180 degree signal we were chasing. Once we went out Washington Pike to the northeast, it became apparent we needed to go northwest. When we crossed 640, it didn't take long to find David. Probably less than 15 minutes.

I couldn't have done this without Emily sitting in the back seat reading out signal strengths to me while I navigated streets I had never been on before. We simply used a Yaesu VX-5 (Emily) and VX-1 (me), switching to horizontal polarization for direction. We kept moving most of the time, so we weren't able to use our bodies as attenuators. Emily slowly unscrewed the antenna, stopping each time she lost the signal. Once she could take it all the way off, we were within 200 yards of David. We didn't know who we were looking for, but it didn't take long to find antennas in the parking lot!

We're looking forward to another hunt after the holidays! Happy Thanksgiving to all.

73,
Hal
WB4E

Hal, I missed the net too. I had to be at my church. I remeber
you were telling K4TJY Ron how simplw your equipment was to operate.
I am KB4FZK and a accompanied Ron on the fox hunt. This was my first
fox hunt. What sort of equipment did you use?

3129. Re: [EastTNAPRS] Fox Hunt Results

Yahoo group: EastTNAPRS
Date: 2007-11-19 15:21:55 UTC
From: David Hoffman
Topic: 3127 Message: 3129

Well I'm glad everyone had a great time with the fox hunt. I intended on getting the results up before now, but I've been kind of busy over the weekend and didn't get to email like I wanted.

Here are the results for Saturday's fox hunt:

1st place @ 2;44 PM was KG4GJE with a Ramsey Doppler Unit
2nd place @ 3:01 PM was KD4DLU & KC4TIQ with some homemade tape measure beams
3rd place @ 4:37 PM was N4IJL with just an HT
4th place @ 4:46 PM was WB4E with daughter and HTs
5th place @ 4:49 PM was KE4WFJ & KI4GBV with a beam
6th place @ 5:03 PM was KI4HDU and an HT
7th place @ 5:13 PM was K4TJY & KB4FZK

I'm glad you all enjoyed the location of the fox den. I had picked that location because of the 2 ridges I saw when using the Topo software. I saw the opening between the 2 ridges pointing southeast into the majority of the city and thought that may produce a nice challenge for the fox hunters.

The fox went on the air a 2 PM sharp. The fox was a Basic Stamp 2 programmed to pick a random number from between 5 and 30 to key and unkey a FT-8500 mobile radio through the mini-DIN data jack for that many seconds. (Approx a 50% duty cycle) The Basic Stamp also did the ID for me after every 15th transmission. The fox was located 4.45 miles away @ 356.7? from the Sun Sphere in the Big Lots parking lot on Broadway just north of I-640.

The fox went off the air one time by accident for about 10 minutes. From what I can tell was, the battery voltage must have dropped below a certain level and the 8500 simple shut itself off.

I had fun being the fox and wouldn't mind doing it again.

David Hoffman - KE4FGW

I agree with David, I'm very glad to hear that everyone had a good time.

I was very pleased with the number of people that participated in the event this time. My initial thought was that there were not many people interested, but a full dozen folks participated, so that seems like a fair number to me.

Congratulations to everyone for finding the fox.

Is it too early to start planning the next hunt?

David, I would like to learn more about the BasicStamp stuff. What does it take to get started building with using them? Also, I'd like to see the code that you wrote for it to see if I can understand it.

Attached is the program code for the Basic Stamp 2. To get started in them you'll need a Basic Stamp at a minimum. The one that I used was the Basic Stamp 2 from Parallax which can be seen from here: http://tinyurl.com/272cug

You can make your own programming cable and provide voltage from your own voltage supplies. You can download the PBasic interpeter for free. That is the cheapest way to go. They also have kits that you can buy etc. that come with all this stuff. Any of the Basic Stamp modules will act as a fox which is hardly nothing for these stamp modules.

What I want to do is learn more about programming PICs. They are allot cheaper than Basic Stamps and seem allot more powerfull.

The code looks pretty easy to follow. Is there a language reference for the stamp? I'd like to know what things are available (like LOW, FREQOUT, etc.).

Can you read/send RS232 data with one of these?

BTW, the URL below does not work for me...

The URL worked for me. Here is the long form of that URL:
http://www.parallax.com/Store/Microcontrollers/BASICStampModules/tabid/134/CategoryID/9/List/0/SortField/0/Level/a/ProductID/1/Default.aspx

Yes, you can do RS232 nicely on the Basic Stamp. I wrote some code to
parse the GPS strings etc. The BASIC Stamp Syntax and Reference Manual
2.2 is located at:
http://www.parallax.com/Portals/0/Downloads/docs/prod/stamps/web-BSM-v2.2.pdf

3134. Fox Hunts and Boy Scouts

Yahoo group: EastTNAPRS
Date: 2007-11-20 13:31:04 UTC
From: William McKeehan (KI4HDU)
Topic: 3134 Message: 3134

A friend of mine has a son who's been in Boy Scouts for the past couple of years. I do not recall what badges they need, but there are a couple of badges where a fox hunt would help them acquire the skills necessary for the badge.

One has to do with radios, the other has to do with GPS units.

Has anyone used a fox hunt to help scouts?

William

The longer URL worked for me, thanks.

It looks like the BASIC Stamp Discovery Kit would be a good way to
step into working with these things.

3136. Re: Fox Hunt Results Equipment Used

Yahoo group: EastTNAPRS
Date: 2007-11-20 13:56:30 UTC
From: William McKeehan (KI4HDU)
Topic: 3127 Message: 3136

Some of the specialty equipment used at this hunt included the Ramsey
DDF1 - Doppler Direction Finder Kit:
http://www.ramseyelectronics.com/cgi-bin/commerce.exe?preadd=action&key=DDF1
This was used by the first hunter to find the fox.

The second team used a homemade two-element yagi. It is an adaptation
of the RDF2 two element, close spaced Yagi antenna described in the
May, 1996 issue of 73 Amateur Radio Today Magazine:
http://home.att.net/~jleggio/projects/rdf/snif_bm.htm

Other equipment included various Arrow Antennas:
http://www.arrowantennas.com/

Many people used simple techniques with hand held radios to find the fox.

Anyone else have any details on other equipment used?

I have created an album in the Photos section of this group for pics from the fox hunt. I have uploaded a couple of screen shots from Xastir showing all of the data that was captured/used to find the fox.

The yellow triangles are DF locations, the red lines show the DF reports. The red circles show the fox area.

Have a look and if you have any pictures from that day, please add them to the pile.

John,

All we used were a Yaesu VX-5R and a VX-1R. At first I also used my Yaesu FT-5200 mobile to pick up the signal. Since we started about 45 minutes late, we knew to head north. Not being familiar with the area, we somehow found a road overlooking Skyline Park. While stopped there, we detected the first signal on the VX-5R. From there, I basically drove while Emily read me the number of signal strength bars on her display. Periodically, we would stop and Emily would hold the HT horizontally and rotate it in a circle and tell which direction she had the strongest signal. Not always being in the best neighborhoods, we did not get out of the car and use our bodies to help attenuate the signal.

As we got within about 2.5 miles, I was picking up the signal on the much smaller VX-1. We used the stock antenna on both HTs. When we stopped, Emily and I would almost always get the same signal direction with our horizontal holds. Once Emily started getting consistently strong signals (3/4 scale or higher), she slowly began unscrewing the antenna. If she lost the signal, she would tighten the antenna until she picked it up again. With the erratic transmission cycle David was using, we had to rely on the second radio to tell if the antenna was too loose or if the fox had unkeyed. We knew from previous experience that if the VX-5 picked up the signal without an antenna, we were likely within 1/8 mile of the source. I planned to use the VX-1 to fine-tune the location, but it didn't take us log to spot the antennas in the parking lot.

Specialized equipment? None.
Method equipment used? Held vertically and horizontally, rotated 360 degrees horizontally, removed antenna.
Other secret? Some patience and persistence.

Hope this helps, John. Look forward to seeing you and more at the next event!
73,
Hal

Thank you very much for your reply and for sharing your great information. I am already looking forward to the next fox hunt. '73 Kb4FZK

3142. Freq Info for NMEA and other Trackers

Yahoo group: EastTNAPRS
Date: 2007-11-26 19:49:08 UTC
From: William McKeehan
Topic: 3142 Message: 3142

This sounds like a good practice to follow, so I thought I'd share it with the group.

Subject: [aprssig] Freq Info for NMEA and other Trackers
From: "Robert Bruninga" <bruninga@...>
Date: Mon, November 19, 2007 4:27 pm
To: "'TAPR APRS Mailing List'" <aprssig@...>

NOTES for NMEA-GPS or other trackers:

We have tested this method for placing your voice operating frequency into the beacon text of your NMEA tracker so that you too can share in the world of two-way human-to-human APRS communications.

Simply make sure that the first 10 bytes of your BEACON text includes your voice operating frequency in this format ">FFF.FFFMHz more..." where "more... Can be any additional text. The leading ">" makes it into an APRS STATUS packet. This also works for old D7 and D700's too. Just put your "FFF.FFFMHz" as the first 10 bytes of your STATUS text (without the ">").

This places your frequency in a known, parseable format for any existing and future applications. For example, the D710 can then tune your frequency with a single key press (TUNE). All authors should consider parsing this location for FREQUENCY info for all stations. This is extremely valuable and part of the ARRL initiative after Katrina, to make sure we had a way of contacting ALL ham radio operators by prominently displaying their frequency of operation. . Email address is also handy...

Almost all APRS stations have these attributes:

POSITION (includes PHG data)
STATUS (free field, but often email address
FREQUENCY (their operating or contact frquency).

We started adding FREQUENCY as the first 10 bytes of the POSITION COMMENT or STATUS packet to APRS several years ago. We need to make sure all web pages tell people how to enter their frequency into their APRS packets, and new software knows how to parse it. See the APRS Frequency SPEC:

http://www.ew.usna.edu/~bruninga/aprs/freqspec.txt

3144. 2008 Events

Yahoo group: EastTNAPRS
Date: 2007-11-27 20:03:49 UTC
From: William McKeehan (KI4HDU)
Topic: 3144 Message: 3144

I've added a few things to the calendar in this group
(http://groups.yahoo.com/group/EastTNAPRS/cal) for early next year.

The Strawberry Plains Half-Marathon & 10K on February 16
The Dalton ARC Hamfest on February 23
The Knoxville Marathon on March 30

If you know of other Amateur Radio related events in our area, feel
free to put them on the calendar as well.

Subject: [aprssig] ANDE -APRS Re-Entry Campaign
From: "Robert Bruninga" <bruninga@...>
Date: Tue, November 27, 2007 1:09 pm
To: aprssig@...

ANDE-APRS Re-Entry Campaign:

The ANDE-MAA satellite (Nav Oscar - 61) will de-orbit in the next few weeks but is fully operational. We encourage activity, because while it is in use (2m packet up/down), then it is awake and sending telemetry. We want to capture the most telemetry to see if we can catch the thermal changes as re-entry approaches.

Who can capture the last telemetry frame?

The most important telemetry is that which is fed live by IGate into the APRS-IS system. Because that is automatically logged and time stamped.
You can verify your data got in by looking at the http://pcsat.aprs.org web page after each pass.

If you manually capture any packets, Please take special care to accurately LOG the TIME of any packets received especially in the final day prior to re-entry. See the contest page below for how to submit entries:

Here is the ANDE Operations web page. It has links to live telemetry too:
http://www.ew.usna.edu/~bruninga/ande-ops.html

And this one is the CONTEST for data collection and operations sponsored by PA3GUO and DK3WN:
http://www.ande-deorbit.com

Any APRS station that is also on the internet can contribute telemetry by simply QSY'ing their normal APRS rig receiver to

145.825 on that final day.

If you do not normally run APRS or an IGate, then you can simply download ALOGGER.EXE which is a full up IGate designed just for satelite gating without having to learn APRS. See Bill's web page:
http://www.billdiaz.dynip.com/ASatLogger.htm

ANDE is coming over the northern latitudes in the afternoons and evenings local sun time, but this pattern moves earlier by 14 minutes per day.
Just monitor 145.825 MHz.

Enjoy!
Bob, WB4APR

3146. UTARC Flights will occur with 48 hours notice

Yahoo group: EastTNAPRS
Date: 2007-11-29 13:56:52 UTC
From: William McKeehan
Topic: 3146 Message: 3146
Attachments: 1 described; binary payloads are missing from this source WARC

The following note from Dan, one of the UTARC members, explains that the next few flights will only have about 48 hours notice.

I'll try to post information to this group as soon as I hear things.
--
William McKeehan
KI4HDU
http://mckeehan.homeip.net

Just a reminder, all the Spirit of Knoxville flights this winter will occur with only 48 hours notice! This is due to jet stream forecast dependency, including the first test flight.
These missions are a scale of balloon we have never dealt with before, so to ensure we can take care of any unknown issues, let's go back to having the launch setup crew 2 hours before liftoff, and handlers and spectators can come as usual 30 minutes prior to liftoff.

We'll be launching this series from Island Home Airport (KDKX) so for any early mornings expect the security gate to be closed, but we will have the code, so just call Greg Williams, launch manager, for the code when you get to the gate if it's closed. I'm going to try and have some coffee and donuts at these early morning ones so it's a little more comfortable to stand around in the cold, but it will be pretty chilly for these launches, so you might want to bring handwarmers.

Balloon launch procedures are new for this one, so we will have a meeting the night before the first launch for the launch team and handlers, in the shack.

Thanks,
Dan

3147. Spirit of Knoxville I info

Yahoo group: EastTNAPRS
Date: 2007-11-30 13:38:37 UTC
From: William McKeehan
Topic: 3147 Message: 3147

This Saturday, Dec 1, UTARC will be launching UX-19, nicknamed the Spirit of Knoxville. Time is set for 7:30 AM Eastern (1230 UTC).

The official page for announcements, updates, and news is changing to the following: http://spiritofknoxville.com/

Purpose: - First Trans-Atlantic flight test.
- Zero Pressure float at 42,000ft, 940 cu ft balloon by Mark Caviezel
- 6lb ballast drop.
- Test of HF RTTY/CW and 2m APRS telemetry reception.

This flight, the Spirit of Knoxville I, will take a balloon far and fast out over the ocean - uncharted territory for us, so we don't really know what will happen to this balloon... If it doesn't make it, we'll keep trying every few weeks until we do.

144.390 (AA4UT-11) APRS (while over the US)
10.122 RTTY/CW Telemetry TBD (while outside of US and UK)

Schedule/Interval

* VHF APRS: position and every 21 seconds, telemetry every 63 seconds
* HF RTTY Daytime: position and telemetry on the following minutes past the hour: 0 10 20 30 40 50
* HF CW Daytime: position on the following minutes past the hour: 5 15 35 45
* HF RTTY Nighttime: position and telemetry on the following minutes past the hour: 0 30
* HF CW Nighttime: position on the following minutes past the hour: 15 45

UTARC is asking shortwave listeners and amateur operators to participate by downloading the Distributed Tracking and Relay Client, or DTRC. The DTRC is pre-programmed to relay the telemetry received by the 30m RTTY transmissions back to the UTARC server via the internet. Users download the software and install, then tune in to the UTARC balloon's RTTY signal, and the information will be relayed back to UTARC's server for analysis. The more stations participating, the better the chances of hearing the signal.

The URL for the DTRC download is:
http://www.spiritofknoxville.com/dtrc.html - details, instructions, and system requirements will be located on this page.

Again, officially, this is only a test-flight, and not an actual trans-oceanic attempt. The flight is testing altitude, ballast control, zero-pressure float, and telemetry reception.

3148. Interference issue...East TN area.

Yahoo group: EastTNAPRS
Date: 2007-11-30 16:16:34 UTC
From: Rusty Boling
Topic: 3148 Message: 3148

Hello all,
Trying to find the source of some interference to a local repeater in the Cleveland and Benton TN area..the 442.250+ pl 118.8. Myself and several others are hearing what appears to be a spur off of an airplane based radio and I assume in the UHF range 450-470MHz. Every day for about the last week or two I have been hearing someone giving traffic reports for Knoxville and identifying himself as "Airborne Bill". I have already spoke to WIVK and South Central Broadcasting companies in Knoxville and neither have heard of him, in fact one of the guys I spoke to was an old ham (KQ4C) with South Central who just happens to be inactive. At any rate, if anyone has heard of "Airborne Bill" please contact me and let me know before the FCC gets him. It does not appear that it is intentional, but since none of the Knoxville stations of heard of him, he may be brand new, especially since the interference has just been within the last week to two weeks. His signal into the 442.250 is quite strong and usually transmits for about 1 solid minute at a time and his audio is quite low but can be understood and it truly sounds as if he is in an airplane with some backgroud noise and a noise cancelling mic...so atleast that sounds authentic. I can hear him on the input to the repeater (447.250) from a hilltop here in Cleveland, TN, but the signal is very weak and is barely above the noise floor, so more than likely people in Knoxville could hear this guy very well. If there are any other UHF repeater owners or anyone else observing this out there with similar problem please let me know as this guy's radio sounds as if it drifts some too. This guy is only heard from about 7am-9am and 4pm-6pm local time, so I think it's legit, but I am yet to hear they guy give the callsign of the station that he may be on. If anyone can lead me in the right direction please email me at ae4bk@... so we can get this guy's radio fixed, or if it's not legit then let's get him off the air. Thanks Rusty NE4ME

From: Roy Pollard
Topic: 3148 Message: 3150

At 4:15 PM I monitored Pete Michaels transmission on 447.250 MHZ
giving traffic reports for
one of the Knoxville Radio/TV Stations.
The source is an aircraft flying around over the Knoxville TN area.

The signal was very strong part of the time at my location just south
of Maryville.

Radio used was Yaesu FT-8900R.
Remember that most of the radios like a FT-8900R have very little
front end selectivity
and the signal that I monitored could very well be a image frequency
of a properly
operating transmitter.

I emailed Pete, I know him and use to handle his web server. I'll
find out his frequency. Most likely his frequency mixed with another
and ended up on 447.250. I think his frequency is in the 460 range.

From: tennesseestargazer
Topic: 3148 Message: 3152

I got a reply back from Pete. His input frequency to his repeater is in the 455 mhz range....close to 456 mhz and the repeater out is 5 mhz down from that. So, either your receiver is not very selective or it's signals mixing.

Scott Wyrick - KD4CWB

1st, his real name is "Peter M Lancellotti" Pete Michaels is his
an "on air alias".

The last update I was given by his radio tech was that he uses a
100watt RF amp from his airplane. As far as I am aware, that far
exceeds the FCC max for aviation mobile. His repeater also uses a
100watt PA on 450.950MHz along with a few other freqs. This is in
the "RPU" (Remote Pick up) portion of the band that is reserved for
broadcasters. Again, as far as I am aware, the FCC power output limit
for this band is 25watts. Additionally, I'm reasonably certain that
in order to obtain RPU authorization, you have to be a licensed
broadcaster like WBIR, WIVK. I don't think traffic reports qualifies.

HE IS A HAM!
His real name and info:

From: Rusty Boling
Topic: 3148 Message: 3154

To all that have responded to be directly or indirectly:

All this makes sense guys and I appreciate your help and I appreciate some of you emailing Pete already. Only thing that puzzles me is why in the world I would hear "Airborn Bill" atleast once during a transmission, unless he has a cohort of some kind assisting him or filling in for him, but I don't think that I misunderstood what he said as I had 2 or 3 other hams listening at the same time with me and they confirmed the same thing. As for the rig that I picked him up on the input with is a Kenwood TM-V7, I am not sure what all others have picked him up with besides the 8900, but if it's keying the 442.250+ with a pl of 118.8 which Joe WD4DES pretty much keeps in top shape, then there must be something, wrong with atleast 2 ham rigs and a commercial grade repeater picking it up. Wow, 100W while in the air? Talk about overkill. I was able to work the 147.180 repeater (located with the 442.250 on Oswald Dome in Polk county) with 1W and a rubber duck from about 6000 ft
altitude while aeronautical mobile from near Murphreesboro, TN in middle TN. Evidentally something in his setup has changed value and is causing the problem or there is some type of mixing going on, but the mixing is very doubtful over such a distance at 3 very different locations. I think we all know what an external solid state amp tends to do and this might be no exception with a probable spur. Might be that he can just put a high-pass filter on and be ok (probably a very good idea considering the power output and altitude combined). To those of you that know Pete...please let me know what he comes up with on this. I am sure with him being a ham that this problem won't exist much longer (or any longer) once all this info reaches him, or if someone can give me his email address, I would be happy to fill him in. Thanks for all the help gentlemen.....Rusty NE4ME

Dear Rusty,

Hope you are doing well. I found your culprit! I have verified the repeater audio to his fundamental frequency which is 450.950.

3155. Digi Status

Yahoo group: EastTNAPRS
Date: 2007-12-04 18:52:17 UTC
From: William McKeehan (KI4HDU)
Topic: 3155 Message: 3155

Well, it seems like this year has been a bum year for local digi's.

WA4RYW-7 went down earlier in the year and has not been operational
for months

W4ACA-7 went down in the last few weeks - presumably there's a problem
with the power source (it's a solar powered digi)

and
KE4OTZ-7 went down recently as well.

If you know anything about the status of these digi's, I'd love to
hear about them.

Digi's are the backbone of the APRS network; without them, APRS
communications are limited.

Thanks for any information.

From: Jay
Topic: 3156 Message: 3156

I watched the latest UTARC balloon last weekend from my
station here at home. The last report I got from it on aprs
was around Conway S.C. I think it was set to beacon on wide2
and with an altitude of around 40000 ft I would have thought
I could have followed it further then that. Did anyone else
track it and what kind of results did you get? Was its beacon
I-gated to rf or do we even have a local I-gate digi anymore?
looking forward to trying again next time.
thanks
KI4MZG Jay

You know, I wanted to mention something about the PATH they were using on this last balloon flight. It was CQ,WIDE2-1.

I stopped tracking it via RF early on and started tracking it via the web at http://www.spiritofknoxville.com/status.html, so I can't report on the RF reception. I did see that findu followed it on out into the Atlantic ocean probably where at that point, APRS on 144.39 was turned off by the flight computer. They used RTTY and CW to track it on past that point.

What caught your attention about that path? That gave it a single hop from any large digi's that heard it direct. Seems reasonable to me. The part that I questioned was the CQ portion, but after looking, I found that CQ is one of the accepted "Generic APRS Destination Addresses" as listed in the spec.

Other destination addresses are:
ALL*, AP*, BEACON, GPS*, DF*, DGPS*, DRILL*, DX*, ID*, JAVA*, MAIL*, MICE*, QST*, QTH*, RTCM*, SKY* SPACE*, SPC*, SYM*, TEL*, TEST*, TLM*, and WX*

With the asterisk as a wildcard.

That's what it was, the CQ part. I wondered if that PATH was going to kill any chances of getting digi'ed or not. So CQ is a normal accepted destination address? That was my question, I didn't know what the CQ was going to do but was surprised that findu kept hearing it all the way to the Atlantic.

From: Hal Weeden
Topic: 3156 Message: 3160

I watched the balloon on aprs.fi. It followed the balloon about 177 miles into the Atlantic. I attributed the long signal the altitude of the balloon. The last signal was still over 33,000 feet at 2140Z. Then W0JRT started putting out object SOK, presumably using the data from the spiritofknoxville web site. This tracked the balloon another 110 miles all the way down to an altitude of 603 feet at 0246Z.

These tracks can still be retrieved from the web. http://aprs.fi/?call=AA4UT-11&mt=m&z=8&timerange=86400 and http://aprs.fi/?call=sok&mt=m&z=8&timerange=86400

Subject: [aprssig] Middle Tennessee Digis Status
From: "Bruce W. Martin" <aprs@...>
Date: Sat, December 8, 2007 6:08 pm
To: "Mailing List APRS TAPR" <aprssig@...>

Today I replaced the NT4UX-3 digi on Blueberry Hill Northwest of Nashville. I replaced the Ft-1500/MFJ-1270B/UIdigi 1.9b3 stack with a HTX-212/KPC3(v8.2) stack. Reports from folks in the area indicated that the old stack had gone deaf.

I discovered yesterday that the NT4UX-2 digi on Short Mountain went off-line a few days after I finally got it to work with WA4APR's local repeater initiative. I hope to get up there tomorrow to try to find out what went wrong.

I also discovered yesterday that the NT4UX-4 digi near Crossville has gone off the air. I am not sure how long that has been so. I hope to get up there before the end of the year to try and find out what has happened to it.

The NT4UX-1 digi seems to still be working fine.

I hope to get updated info on the <http://www.nashvilleaprs.net>/ <http://www.naprs.net> web site updated as soon as ssh access is restored to the server.

If anyone else wants to build one of these, or you need a PIC programmed, contact me. Mircochip does free sample some of the PIC chips. Check out www.microchip.com and select the PIC microcontroller page.

3169. [Fwd: [UTARC Chat] UTARC Spirit of Knoxville II launch Jan 2/3]

Yahoo group: EastTNAPRS
Date: 2008-01-01 15:32:40 UTC
From: William McKeehan
Topic: 3169 Message: 3169

Greetings,

Happy New Year to one and all. UTARC is pleased to announce its first trans-Atlantic balloon attempt, the Spirit of Knoxville II. It is our intention to launch from Knoxville Downtown Island Airport at 02:00 UTC January 3 (9:00 PM EST January 2). Local visitors are welcome to come to the launch. Here is a Google map of the launch location:

http://maps.google.com/maps?sll=35.962984,-83.87171

We also invite everyone to follow along with our new, enhanced live tracking system at:

http://www.spiritofknoxville.com/

Also, we are pleased to announce our new alert system, which allows you to sign up for email alerts when various flight conditions are met. Visit this site for more information:

http://alerts.spiritofknoxville.com/

DTRC users, we need your help! The DTRC status page (http://dtrc.utarc.org/status.php) will be updated soon with more detailed information. Your help is vital to our success. If you have any questions, just email us.

Thanks again, and Happy New Year!

The UTARC Team

3171. Using APRS in emergencies

Yahoo group: EastTNAPRS
Date: 2008-01-04 19:31:40 UTC
From: William McKeehan (KI4HDU)
Topic: 3171 Message: 3171

I read a message on the TAPR APRS sig mailing list today and thought that a portion of it was worth passing along for consideration. Most people think of APRS as only vehicle tracking. This guy was caught in in Oklahoma a few weeks ago in those ice storms. Here's his suggested use of APRS during that time.

1. Placing "resources" that he would be willing to allow others to use during the disaster on the APRS map. For instance he had a generator that he could have loaned out to neighborhood/shelter that was without power. To broadcast this ability, he could have placed a "generator" on the map with his call and the frequency he was monitoring.

He further says
<quote>
And I could see the usefulness of marking shelters, locations without power, locations without cell phone coverage, places where water was available, working gas stations, etc.
</quote>

and
<quote>
I think the bulletins could have been used too - things like contact numbers for getting lists of shelters and such could be put there, announcements for needs to get ham operators at shelters or something, etc.
</quote>

I love the idea of using APRS in more ways. I hope sharing these thoughts with you all will get you thinking and planning for such things in our area.

I for one will do some searching and build a list of common shelter locations near me and some phone numbers that can be called for their status.

What are some other thoughts about how APRS can be used during emergencies? Remember that the Great Smoky Mountains National Park is America's most visited national park, so there are frequently people in the area that could be caught off-guard by some emergency situation.

3173. APRS as a Situational Awareness tool

Yahoo group: EastTNAPRS
Date: 2008-01-11 19:28:11 UTC
From: William McKeehan
Topic: 3173 Message: 3173

I like what Bob has to say below. I would like to see APRS used more (as he is describing).

One thought that comes to my mind is that for every event, there should be a dedicated "APRS Net Control" who creates APRS objects/bulletins for things that are not automatically being generated. before the event, object/bulletins can be created to convey information that the event participants would need. In some events, the normal Net Control operator can handle these additional responsibilities, but I think it would generally work better if it were someone outside of the event area (in the comfort of their home maybe) who acts as the APRS eyes and ears.

I also see this as something that can apply to every-day life, not just special events. For example, if you are sitting around listening to the radio (or watching television) and you hear something that may be valuable for everyone to know about (traffic accident, fire, band opening, etc.) translate that to APRS.

One simple thing that I'd like to see would be announcements from the various nets posted as bulletins.

What do you think?

---------- Original Message ----------
Subject: RE: [aprssig] APRS as a Situational Awareness tool
From: "Robert Bruninga" <bruninga@...>
Date: Fri, January 11, 2008 12:56 pm
To: "'TAPR APRS Mailing List'" <aprssig@...>

> APRS is billed as a situational awareness service,
> yet the map is largely barren of situational
> awareness information. I ask myself "why?"

My opinion why APRS is not used for real situations:

1) APRS has been presented incorrectly by far too many people as a vehicle tracking system (transmit) as opposed to an information resource.

2) The 5% of a club that does APRS has not fully realized that their job is INFORMATION INPUT (objects, messages, and bulletins)

3) The poor implementation of objects in some clients kills the channel when used for inputing lots of objects, defeating the primary mission of APRS.

APRS was designed around the assumption that APRS would not be used by very many members of a club, and very few devices could actually report their own position. The design assumption was that manual entry of large numbers of objects would be a major function of APRS inorder to fully represent the situation.

Fundamental to this plan was that New objects, moved objects, or deleted objects were re-tried in 8, then 16, then 32 seconds, then 1 minute, 2 minutes, 4, 8 and so on down to a final 10 minutes if it was a local event or 30 minutes if it was a long term regional event. This made the map very reliable and up-to date whenever any object was added, moved, changed or deleted. The map had basically 3 retries at being current up to the MINUTE!

The idea was that APRS users would respond to an emergency if they have the time and are in the right situation.

A) As steve points out, if an APRS operator is in the middle of it he has too much else to do. But if he can, he should put out a packet showing where he is, his status or needs, and his operating voice frequency for contact. Then attend to other things.

B) Those APRS volunteers that are out of area but can monitor the situation, should put on headphones and LISTEN to nets or other data sources. Every fact, operator, station, location, position, object, situation, fire, wreck, that is overheard ONCE should be put on the APRS map. THIS is what APRS was designed to do. It was supposed to be EVERYONE contributing all their small bits of the pie onto the ONE area situational APRS display resource that can be viewed by everyone at their own needed and focused scale. (Think: a zoomable APRS situational display in front of every EOC operating position).

C) What killed (B) however is the very poor implementation of objects in most follow-on clients. Uiview transmits all objects (Old, and new) at exactly the same rate and all at the same time in one huge block. This generates an order of magnitude too many packets for the need, clobbers the network for a full 30 seconds at a time for 30 objects, blocks most digipeats of those objects, and either has too much time lag or too much QRM to be of real value.

It is self defeating to use APRS as intended (managing dozens and dozens of objects) using Uiview as the data entry station. HOWEVER, there are work arounds as long as everyone is mindful of these limitations.

1) Establish only a properly implemented APRS client as the OBJECT manager. This station rapidly refreshs new info, decays old info, and randomizes the transmission of each object independently so that none are transmitted in big wall-to-wall blocks that self-distruct their own digipeats and block other users for long periods.

2) Have operators trained on this system to take-over any object posted by a Uiview station. If this station has good ears or a high location, it has another advantage of better use of CSMA in the situation area to minimize collisions too because it can hear more.

3) If #1 and #2 are implemented, then Uiview can be used freely and purposefully by everyone to input any objects that are needed. This works because the #1 OBJECT-station takes them over as soon as they appear. This usurps these objects from Uiview and eliminates all of the channel problems caused by it.

Because taking-over-objects was fundamental to the APRS design, all of the above can occur transparently to the Uiview users. He does not even know that the object has been taken over, because it remains on his screen (and does not display the ownership attribute). If this original station wants to move the object, he can do so, and again, the network will respond to this new entry, but again, the centeral OBJECT operator will take over the new position as sooon as it sees it.

In fact, the original APRSdos was designed with a NETCONTROL function. With this switched on, that station would take over all objects as soon as they appeared. (though anyone can move them at any time). This is why in APRSdos, objects have the two color atributes for OWN object and OTHERS object. So at a glance, you can see ownership of each object as it might be changing back and forth.

Another way that Uiview can be used for objects is if the load is spread out. Say each operator only inputs and manages a few objects. Say no
more than 5 or so. This prevents the big-block-transmission problem and fratricide problem (most TNC's will drop the carrier after each seven packets and check the channel for channel sharing). But this lets the digi start transmitting which then collides with the next seven. This is why Uiview simply cannot be used for more than a few objects for anything except DIRECT simplex operations.

In this case, since all objects both old and new are always transmistted on the same schedule by UIview, these schedules have to be well spread out. Probably it is best to use a 10 minute rate. But this then reduces the original APRS timeleness by an order of magnitude (from under 1 minute to over 10 minutes) and is another reason why people do not see APRS as a

real time tool anymore. But keeping the channel QRM down is probably more important since new objects do become old objects pretty quickly...

The only problem is that either of these solutions requires a a lot of skilled labor, and attention and planning. Exactly what APRS was supposed to avoid!

> ... as I listen to the on-air traffic, I hear
> a high degree of professionalism, focus and
> dedication.

And the key to getting APRS used, is to not try to change those operators, but instead, to place a PC APRS display in front of them, not to make him an APRS opeator, but so that he has a MAP display that he can zoom around on the map as needed to see what is going on. Let others in the background or away from the area, be the INFO-INPUT people to keep the map and BULLETIN/ANNOUNCEMENT board up to date.

See next message about the BULLETIN/ANNOUNCEMENT BOARD.

I have taken the week long discussion of "why APRS
Is not used as much for situational awareness"
And built a web page around it:

http://web.usna.navy.mil/~bruninga/APRS-tactical.html

It should pretty much put everything there in once place.
If I have omitted anything, let me know.

I'd still like a good photo of a good EOC with multiple
Ham radio oeprators at consoles.

In the councils of government, we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the militaryindustrial complex. The potential for the disastrous rise of misplaced power exists and will persist. We must never let the weight of this combination endanger our liberties or democratic processes. We should take nothing for granted. Only an alert and knowledgeable citizenry can compel the proper meshing of the huge industrial and military machinery of defense with our peaceful methods and goals, so that security and liberty may prosper together. - Dwight D. Eisenhower

It is located on Chilhowee Mountain just outside Pigeon Forge, TN.

This wide coverage repeater is located on the same tower as the commercial FM station WIVK, 107.7 FM. This radio station, licensed to Knoxville TN, has a very wide coverage area, which encompasses the majority of Eastern Tennessee, from Bristol to Chattanooga. So, if you can hear this frequency on your regular FM Broadcast radio, you can most likely also hear this repeater!

See http://wb4gbi.com/greentop.html for more information.

---------- Original Message ----------
Subject: [aprssig] APRS Event Scoring and Messaging
From: "Robert Bruninga" <bruninga@...>
Date: Mon, January 28, 2008 4:33 pm
To: "'TAPR APRS Mailing List'" <aprssig@...>

Had another great Scout Event using APRS D7's for troop reporting.

There were 17 event stations and 50 scout troops. We were able to field over half of the stations with D7's for score data entry (10). In an afterthought, we could have done at least 3 more for a total of 13 with data entry.

Using the D7's substantially reduced voice traffic and transcription errors, and repeats, while providing error free data recording at the HQ tent. See

http://www.ew.usna.edu/~bruninga/aprsevent.html
The 2008 photos are at the end.

This is APRS at its best! Not only did the APRS data entry stations not have to busy up the 146.43 voice net, but we operated on 445.925 with our data to avoid any QRM to the 2m voice traffic -AND- we could also chat on the same UHF channel for data coordination.

Further, every D7 operator could be tracked on the main APRS map back at HQ as operators moved around the event -BUT- without the encumberance of any GPS's, wires, or fussy cables. We prepared a LAT/LON grid on the event map, and every location in the entire square mile venue could be entered on the D7 by just pressing the POS key and dialing in the last 2 hundredths digit of LAT or LONG. These were "scouts" and dads by the way, who should know how to look at a map and estimate their position.

To make that even easier, we prepared the four XX/YY digits for each of the 17 event stations in advance, so that if an operator changed locations, he only had to adjust those 4 digits to

update his position.

RESULTS: It worked great! Net control could leisurely look at the incoming scores on the D700 control panel mounted to his clipboard, and pass them to the score keepers. The contrast with Voice reporting is that each voice report, interrupts the netcon's chain of thought and the voice net everywhere, and demands immediate attention, while with the data messages, they arrive in the background, and can be viewed by Netcon at HIS convenience.

Even the newly trained D7 HT operators said it was great (after they got the hang of it). Of the 10 D7 operators, only 4 had ever used a D7 before. Training was 5 minutes on the spot when they were handed a D7 and a gouge sheet.

LESSONS LEARNED:

1) Don't plan on the NETCON with the D700 on his clipboard at HQ trying to use it also as his voice rig... Everytime he might decide to read some messages, a voice call might come in, and the PTT bumps him off the message screen.

2) Don't abbreviate Cub Scout and Boy Scout station as CS# and BS#. They sound the same on the air. Call them BS# and WS# (for Weblos).

3) Don't assume the battery on your 10 year old D7 is any good. Yours truely showed up with 5 overnight-charged D7's, but two of them were dead in the first 15 minutes.

4) The few other ops that had D7's also had D700's in their cars. We should have realized that the D700's could just as easily been used for data entry at those stations, thus freeing up their D7's for use elsewhere. Score reporting is only a one-time event every 45 minutes. Easy enough to walk over to the car and enter the data on the Mic Keys.

5) The D7 is ideal for this application. Operating dual band, it was able to do both the 146.43 voice net and the 445 APRS data net at the same time. But to save power, either band could be toggled off when not needed with the DUAL key. Or both could be on for voice but the TNC toggled off between entries.

6) Owners of D700's and D7's need to learn how to send, receive and edit messages. These radios (and APRS) are much more than just vehicle tracking!

On the web page above, we had even prepared an APRSdos map so that detailed tracking of multiple objects was possible.

APRS, its not just vehicle tracking!

3185. Re: [EastTNAPRS] APRS Event Scoring and Messaging

Yahoo group: EastTNAPRS
Date: 2008-01-29 15:34:13 UTC
From: David Hoffman
Topic: 3183 Message: 3185

Can you imagine doing this at the Knoxville Marathon?? What little traffic that comes and goes from the rest stops could all be done on APRS.? The voice frequency can then be reserved for more important things like the "live-start" announcement and emergency traffic etc.? APRS at net control can catch all the traffic and even reply via APRS.? More moving targets or resources can be tracked and displayed on the APRS map.? I can see it now, rest stop 5 is low on cups.?
What particularly caught my interest was Bob's comment of, "... with APRS, data is entered at senders convenience and received at receivers convenience".? I still think that Bib numbers could be sent via APRS from the half-way split back to net control and the finish line.? Getting those Bib numbers of who?turns at the half-way point to head back to the finish line is something that the race officials really need.? APSR can provide the accuaracy needed which leads me to another one of Bob's points, "Phonetics and repeats, and transcription errors are frequent" on the voice frequency.
I can even see this being used at the Cherohala Challenge too.

3186. Re: [EastTNAPRS] APRS Event Scoring and Messaging

Yahoo group: EastTNAPRS
Date: 2008-01-29 16:23:18 UTC
From: William McKeehan
Topic: 3183 Message: 3186

I can imagine it.

The only problem that I see is that to use APRS, more people have to have the capability. I'd really like to see more of the METERS group get involved with APRS; I figured that with the success of APRS at the marathon (METERS has organized communications for that event in the past) that some of them would be interested. Without the capabilities, it's nearly impossible. The turning point for the full/half marathon would be a prefect place; maybe we can get Rick and Angie (they have worked the event in the past) to work that area for this years marathon and use APRS to transmit that information.

The Strawberry Plains 1/2 marathon is in a few weeks, I'd like to see it used as a learning opportunity for expanding APRS. I've not even heard if anyone will be providing communications for that event.

The Blount ECS group is certainly leading in APRS usage for the area; I wish more groups would follow.

3187. Re: [EastTNAPRS] APRS Event Scoring and Messaging

Yahoo group: EastTNAPRS
Date: 2008-01-29 19:29:50 UTC
From: David Hoffman
Topic: 3183 Message: 3187

I too wish METERS would concider APRS in more events. I have put on APRS demos for them in the past and used it in the marathon. And they have shown interest, but when it comes down to who has the equipment, I see hardly any interest there. Sure, a couple of folks have a TNC here and there but most are not sure on how to hook it all up and use it.

Rick and Angie have already indicated that they will be busy that weekend.

METERS is doing the Strawberry Plains 10K on February 16th. So far we have 5 folks that have said yes and 2 maybes. We do need more volunteers for this event. We could use some volunteers with APRS capabilities too, but would like to cover the basic needs of communications first. If anybody wants to volunteer to use their APRS, I will be glad to setup a display station at the finish line.

Do you know who specifically who in METERS is coordinating the Strawberry Plains 10K?

I'd like to toss my name into the list of volunteers.

Fred Koenig, KI4EOJ, is the coordinator this year. And I am helping him
out in any way I can. I'll put you on the list. Thanks

> 10:00 am EST from Strasburg, VA.

Andre, Can we get the following back to the VWS powers that be:

*** Please put out local APRS bulletins on the status of the
launch so that mobiles will be alerted to this activity. It
doesn't take much to send out a bulletin to be received by all
the mobiles in real time:
You can even do it from your D7 or D700:

1) Since this is a regional activity, go ahead and violate the
usual 2 hop path receommendation and use 3 hops. This should
cover the 6 state area.

2) Send your bulletins using the message address of BLN# where #
is the number of the one-line bulletin.

3) Use sequential BLN# numbers if the information is new. But
you can also re-use the same BLN# to overwrite (or in effect
cancel) a previous bulletin.

4) Your bulletin can even contain the text [Balloon in view] and
any APRS software with voice code will speak it. The D700 will
speak some words, but I forget the vocabulary.

APRS is an information distributino resource. Plesae use it to
keep everyone informed about the progress of this launch. Not
just tracking the balloon!

Bob, Wb4APR

3193. APRS Overview

Yahoo group: EastTNAPRS
Date: 2008-02-11 01:57:24 UTC
From: William McKeehan
Topic: 2403 Message: 3193

During each of the last couple of Sunday night nets, someone has asked for an overview of APRS.

The following is a document that I wrote a while back that I think gives a pretty good overview of what APRS is:
http://mckeehan.homeip.net/wiki/wikka.php?wakka=APRSOverview

Feel free to share this link with anyone (or club) that would like to have an overview of what APRS is all about.

If you see anything in that document that is incorrect or should be updated, please let me know and I'll be happy to keep it up-to-date.

Thanks!

3196. off-topic (Roane County Contact)

Yahoo group: EastTNAPRS
Date: 2008-02-14 01:41:28 UTC
From: David Hoffman
Topic: 3196 Message: 3196

I can't think of a better email group at the moment to ask this of? So sorry for the off-topic question here.

Is there anyone from Roane County on this email group that can get me in touch with someone that coordinates public service events for your area? I thought of Bill Farnham, the EC for Roane County. But I evidently do not have the right contact information to get in touch with him. Can someone get in touch with him or come forward that can get me in touch with the public service events coordinator for Roane County? Thanks

David Hoffman - KE4FGW

3199. APRS similiar to D-Star?

Yahoo group: EastTNAPRS
Date: 2008-02-14 14:57:40 UTC
From: Rick Rogers
Topic: 3199 Message: 3199

I'm Rick and I just joined this group after hearing last Sunday night's net. As you can tell from my call sign, I'm also new to ham radio. So pardon my newbie-ness, but I tried a search and didn't find anything on this. If there's a link that handles this question, please point me in the right direction.

How is APRS different from D-Star, in functionality and purpose? I believe/think that D-Star is put out by Icom and is being promoted by them. I've heard a down side to D-Star is that if the signal is weak enough, you just get nothing, rather than noisy static. And if APRS is a totally different animal, please let me know that too. I realize my questions may be too broad and general, but I'd like any clarification and help you could give me on this.

Thanks,
Rick
ki4vyv

3200. Re: [EastTNAPRS] APRS similiar to D-Star?

Yahoo group: EastTNAPRS
Date: 2008-02-14 17:38:58 UTC
From: William McKeehan
Topic: 3199 Message: 3200

D-STAR is a specification of an over-the-air digital protocol for voice, and for high speed (128k) data. The digital voice protocol provides for a little less than 1200 bps of data to be carried with the voice.

D-STAR can do some of the same things that you can do with APRS, but it's really an apples to oranges comparison.

APRS uses standard FM modulation, so just about any Radio can be used for APRS. If you tune your radio to 144.39, you will be able to hear the APRS Packets. For APRS, the only special hardware that you would need is a TNC (Terminal Node Controller). If you have a PC, software is available that will allow your sound card to act as a TNC.

I am by far not an expert on D-STAR; I just know what I've read. Here's a good article on the subject that may give you some more details on exactly what it is/does: http://www.scribd.com/doc/267416/DSTAR-For-VHF-UHF?ga_related_doc=1

Hope this helps...maybe someone else with more D-STAR knowledge will chime in and give a better explanation.

3202. Local Information Initative

Yahoo group: EastTNAPRS
Date: 2008-02-18 01:52:36 UTC
From: William McKeehan (KI4HDU)
Topic: 3202 Message: 3202

On the net tonight, I presented some ideas from WB4APR's "APRS Local Frequency Info Initiative" page. If you want more details, you can read more (much more actually) on his web site:
http://eng.usna.navy.mil/~bruninga/localinfo.html

Tune in to the net next Sunday when the topic will be "what information is transmitted in a basic APRS position packet".

See you then!

William

3203. Re: APRS similiar to D-Star?

Yahoo group: EastTNAPRS
Date: 2008-02-18 20:38:54 UTC
From: William McKeehan (KI4HDU)
Topic: 3199 Message: 3203

I was looking at RACK's (Radio Amateur Club of Knoxville) web site (http://www.w4bbb.org/) today and noticed that they have Tim Berry on the schedule to do a presentation about D-Star, Repeaters and 6 Meter Nets.

He is scheduled for their meeting this month which is this Thursday.

If you've seen any of Tim's presentations, you know he's a very knowledgeable fellow - I'm sure this meeting would yield a lot of information about D-Star.

From: Keith Chancey
Topic: 3204 Message: 3204

W4KCO-7 was placed into operation today. Its located in Ducktown Tn. (Widen-n, TNn-n). It and W4KCO-3 on White Oak MT uses TNC-X's with daughter boards. They both relay MRX,HTX and FFC.

3205. Re: [EastTNAPRS] APRS similiar to D-Star?

Yahoo group: EastTNAPRS
Date: 2008-02-20 04:18:36 UTC
From: Bob Thomas
Topic: 3199 Message: 3205

Rick,
I know nothing about D-Star, except a wild guess that it's a digital signal where APRS(a packet radio program) is using standard phase shift FM packet signals. Digital reception requires a good signal and is capable of being used on a very narrow frequency bandwidth where standard packet FM signals require a wider frequency bandwidth. An example is the switch over from FM TV signals to digital. The new digital frequencies used for TV require much less bandwidth. My estimate is they'll get about a 3 to 1 ratio putting 3 or more digital TV channels in the space of 1 of the old ones. It won't be too far off when FM radio will also go the wayside and go digital... I think somewhere around 5 years from now in 2013? As far as packet equipment goes, I do know that there is a difference in equipment used to decode standard packet, such as what APRS packets are using. I've heard the same thing about the Kenwoods with the built-in TNC's needing a strong signal, but I've never witnessed it myself. What I do know for certain is that some TNC's I've used in the past required nearly a full scale signal and some can decode FM packet right out of the muddy white noise. Most come right out of the box working well, some need to be set up using the tnc's and the rig's manuals. Also, packet is a standard FM audio signal, something many people forget. Keeping that in mind, how your rig reproduces that signal back into an audio signal is an important factor. Most modern day rigs are built to be compatible for use with packet and that's not usually a problem, though. With digital signals, you'll get them, or you won't, no in between. To best describe that is to be watching a TV show via satellite when a storm cloud goes over and you lose the signal. Getting back to D-Star vs APRS... as with any amateur radio sytem there are three things to always remember. First and foremost is you need a great antenna. I use homebrew beams. Second, your receiver needs to to have high sensitivity and quality signal and sound reproduction. Third, you need a great transmitter capable of the modes you plan to use that produces the signals you intend to send. I tend to stay away from "having all my eggs in one basket" "all mode" stuff so I can try different things. The bottom line is the benefits of digital verses FM is the same as what you see between a DVD disc and a 3-1/2" floppy or a cassette tape. FM packet is very limited in speed the amount of information that can be sent. Digital has lots of promise for amateur radio staying alive and well in the future. The above is my 2 cents worth of opinions and guesses. You can find a wealth of information about packet at: tapr.org

God Bless,
Bob Thomas, ks4ng

Subject: [EastTNAPRS] APRS similiar to D-Star?

I'm Rick and I just joined this group after hearing last Sunday
night's net. As you can tell from my call sign, I'm also new to ham
radio. So pardon my newbie-ness, but I tried a search and didn't find
anything on this. If there's a link that handles this question,
please point me in the right direction.

How is APRS different from D-Star, in functionality and purpose? I believe/think that D-Star is put out by Icom and is being promoted by them. I've heard a down side to D-Star is that if the signal is weak enough, you just get nothing, rather than noisy static. And if APRS is a totally different animal, please let me know that too. I realize my questions may be too broad and general, but I'd like any clarification and help you could give me on this.

Thanks,
Rick
ki4vyv

3207. New Member

Yahoo group: EastTNAPRS
Date: 2008-02-24 14:54:22 UTC
From: Steven Brower
Topic: 3207 Message: 3207

Hi,
I am a new member and also a new Ham. I am interested in APRS and that's why I got my license. I am so new in fact that I still have never made a contact with my tiny Yaesu vx-1, although I listen a lot, trying to learn before I disrupt the airwaves. Another strike against me, regarding this group, is that I live in New York most of the time. I haven't been able to find an organization here that's current like yours, so I took the liberty of listening in to you all. Thanks for allowing me to join and I look forward to interacting.

Welcome to the hobby (Ham Radio), the mode (APRS) and the group!

APRS was the reason that I got involved with Amateur Radio also; I was using a scanner and soundcard interface to listen/plot APRS stuff for several months before I got my ticket.

This group was started to help people get started with APRS. If you look thru the archives, you'll see discussions of several issues that people have encountered while trying to get their stations operational; it's a good place to search if you encounter a problem to see if someone else encountered it and has a solution to it.

The links section of this group has many valuable pointers. It points to software, settings suggestions, etc for getting operational with APRS.

Feel free to ask any questions that you have here; we'll do our best to answer them for you.

If you want to find a larger, national group, you can sign-up for the TAPR APRS SIG here:
https://lists.tapr.org/mailman/listinfo/aprssig

This group is often very technical and there's generally a fair number of messages daily, so it's not for everyone, but it does have a lot of information and great participation from Bob Bruninga (WB4APR, the creator of APRS).

Welcome to the group.

3210. Sunday Night Net Discussion Topics

Yahoo group: EastTNAPRS
Date: 2008-02-25 14:59:22 UTC
From: William McKeehan (KI4HDU)
Topic: 3210 Message: 3210

If you missed the net last night, you missed the discussion on these topics:
-- New Digi
-- 2008 Field Day
-- Folding J-Pole
-- APRS Packet Contents

Overviews:
-- New Digi
There is a new digi (W4KCO-7) in Ducktown, TN (almost due East of Chattanooga). It's configured as a high level WIDEn-N digi and also supports TNn-N.

-- 2008 Field Day
The ARRL has dropped the demonstration 100 point bonus. This was used at some local field day events to help spread the word about APRS. They have replaced it with an Education bonus. To receive the 100 point education bonus you have to have a hands on type of activity that teaches something "new" to your participants. Full details can be found at the ARRL.org web site.

-- Folding J-Pole
There's an interesting design of a "folding" J-Pole that I found on the internet. A video showing construction and links to pages with full details can be found on APRSTV.com (it's currently the most recent episode).

-- APRS Packet Contents
And lastly, we talked about the contents of APRS Packets. For those of you not involved with APRS, you may not be aware of just how much information is contained in a single packet.

For starters, APRS has a number of packet types including
Position Report
DF Report
Object
Item
Weather
Weather
Storm Data
Telemetry Report
Message
General Bulletin
Announcement
NWS Bulletin
Query

Status Report
Third-Party Format
User Defined Data Format
Invalid or Test Data Format

Two of the most most common packet types for position reporting are the Standard Position Report and the Mic-E Position Report.

The Standard Position Report includes:
Software/Hardware type/version
Position (latitude, longitude)
Symbol
Timestamp
Comment 36 characters

One of these:
Course/Speed
Power/Height/Gain/Direction (i.e., using a beam antenna)
Radio Range
DF Signal Strength

The Mic-E Position Report (used by a variety of devices including the Kenwood's) includes:
Software/Hardware type/version
Position (latitude, longitude)
Course
Speed
Symbol
Mic-E Message Code (7 standard, 7 custom, or emergency) Telemetry Data; often Altitude Status Text

The Symbols are a vital part of the above packet types. There are approximately 188 possible symbols; 94 have tha ability to have an overlay (0-9,A-Z), so the ability to represent a wide variety of things visually is available by using the symbol.

So there's a short primer on what's in an APRS packet. Lots of information in a small package.

See you next week when we discuss APRS and severe weather.

---------- Original Message ----------
Subject: [aprssig] APRS value at events
From: "Robert Bruninga" <bruninga@...>
Date: Thu, February 28, 2008 12:21 pm
To: "'TAPR APRS Mailing List'" <aprssig@...>

Continuing with my attempts to get APRS back on track as not just a vehicle maping system, I just updated this paragraph on my web page. I thought it might give a slightly different view:

New paragraph:

The photo ... shows a typical APRS set up in the field at an event. This station can be used to not only show other personnel at the checkpoint the tactical situation, but it keeps the APRS operator at this site informed...
It does this while not requiring his immediate and constant attention except when he needs access to the info. His laptop has been doing the radio monitoring "for him" so that he does not need to keep his ear tuned to the constant chatter on the voice channel. And if he needs info, he does not need to request it from the voice net, but can just view it on his APRS displays when "he" needs it.

http://www.ew.usna.edu/~bruninga/APRS-tactical.html

In otherwords, not just the location of vehicles, but all announcements, bulletins, messages, status, lists of info, locations of assets and personnel and objects... References, phone numbers, links, whatever... If it has anything to do with the event, it should be on APRS...

Something like that..
Bob, WB4aPR

Me too. I think having APRS at the split would have some real value. I need volunteers for it.

Right now I have enough folks that volunteered to cover only 10 of the water stations. I really need at least two at the split taking down BIB numbers of full marathoners that turn and only do the half marathon. That sort of information is valuable to the marathon directors in a timely manner and APRS would do it with no problems. Otherwise, this information needs to go on the voice net and some times, that can get very busy.

I am in need of volunteers even if you don't have or can use APRS for the Knoxville Marathon on the morning of March 30. That's just 5 weeks away. Email me if you would like to help out.

I'm pretty sure you already have my name on the list, but if not, please add it. This is a long event and requires a large number of volunteers. METERS is the primary organization involved, but the performance of hams at this event reflects on the entire ham community, so involvement from a variety of groups is needed. I encourage everyone that has an interest in public service to work this event if at all possible.

As far as using APRS at events...

You know those pages that are often handed out at the events that we work, the ones that list important information (like who's working the event, where they are, tactical call assignments, etc.)?

Can you imagine if that information was all handled via APRS. Last minute changes would be trivial because the net control station (or designated APRS station) could update the information, transmit it via APRS and everyone would have the latest information. Just view each line on the page as a bulletin.

Even key events (like "The Race Started at 9:02") during the event could be transmitted this way, sorta like an electronic NCS log, just increment the bulletin number each time you send a new one (reusing an old number when that information needs to be updated/replaced).

Ahhh....I can dream...

William, I do have you down as the lead/tail APRS. It would be nice to see an APRS station at the split too. I visualize individual messages coming into the finish line with nothing more than just a BIB number in them. This should prevent any errors in getting these numbers to me via voice at the finish line. The sender could double check the number before hitting send.

Perhaps this year, I can sent out some of those types of messages via APRS that pertain to the marathon.

3217. AMSAT Director of Field Operations to speak at Smoky Mountain Amateur Radio Club

Yahoo group: EastTNAPRS
Date: 2008-03-07 04:36:42 UTC
From: William McKeehan
Topic: 3217 Message: 3217
Attachments: 1 described; binary payloads are missing from this source WARC

AMSAT Director of Field Operations
to speak at Smoky Mountain Amateur
Radio Club

Gould Smith, WA4SXM, an avid amateur radio operator since 1976, will present a program about amateur radio satellites on Monday evening, March 24. Gould has experimented with most of the amateur radio modes but has mainly been interested in amateur satellite operation since 1988. Gould is an author who has written a number of publications for AMSAT as well as lectured numerous times on amateur satellites. He also authored the original Amateur Satellite column for CQ VHF magazine. Currently Gould serves as the AMSAT Vice President for User Services and the lead command station for the AO-51 amateur satellite. Serving as an ambassador for AMSAT, Gould says, "it allows me to meet many new people and introduce them to the challenging world of amateur satellite operation. The first myth I try to dispel is that amateur satellite operations doesn't need to cost a great deal to get started."

In Gould's professional life, he has spent many years writing real time control system software and managing projects for analog and digital TV with Philips. We are looking forward to Gould's introducing us and sharing with us his excitement about amateur satellite operation and fun.

The club meets Monday, March 24 at 7 p.m. in the basement of the Steelworkers Union Hall in Alcoa. The public and all amateur radio operators are invited to attend.

From: William McKeehan
Topic: 3218 Message: 3219

Let's see if I can answer this one. To answer it, I have several questions.

Question 1 - What callsign-ssid are you using for your home and mobile station?
If these are the same, that will cause problems.

Question 2 - Is your home station ever on RF?
If an IGate has heard a station on RF recently (generally defined as 30 minutes0, then it will not gate messages from that station to RF from the internet.

Question 3 - Is your mobile station within range of an IGate? Knowing the callsign-ssid of your mobile station will help me answer this one. Not everything that goes to the internet comes back out on RF - the 1200 baud channel on RF is simply too small to handle that.

General IGate setup
An IGate will only gate messages to a station that the IGate has heard on RF recently.
An IGate will not gate messages from a station on the internet if it has heard that station on RF recently.
An IGate will only gate messages to a station that it has heard via a small number of hops (i.e., if my IGate hears a station in Atlanta and then sees a message from someone on the internet to that Atlanta station, my IGate will not gate the message to RF).

These are the first thoughts that come to my mind...others may have more to add.

3221. Knoxville Marathon 2008 Announcement

Yahoo group: EastTNAPRS
Date: 2008-03-11 02:04:24 UTC
From: David Hoffman
Topic: 3221 Message: 3221

All,
The Covenant Health Knoxville Marathon 2008 is just around the corner on Sunday, March 30, 2008. I could use some help with communications again this year. It?s a Public Service Event opportunity to test out and try your equipment for a great cause. They are expecting from 4600-5100 runners this year. They are already up over 19% from this time last year. So they are expecting a wonderful turnout. I still need some communications help from different spots on the course. If you would like to volunteer your time for this event, please contact me via email at david at ke4fgw.net or leave me a message at 212-4049.

Someone else pointed out a common mistake with UI-View that I overlooked.

To have UI-View32 send a message via Internet and not RF, put an "I"
in the Port box of the message window.

3223. UTARC making history

Yahoo group: EastTNAPRS
Date: 2008-03-12 12:58:08 UTC
From: David Hoffman
Topic: 3223 Message: 3223

I don't know if you all have been following the latest balloon launch from UTARC?? But they are making history.? Here is some of the emails with links to see.
Hello all,

UTARC is excited to announce that Snox IV has comfortably broken the earlier great circle distance record of 1411 miles, set by Bill Brown in 2005. At 16:01 UTC (12:01 EDT), the balloon had traveled 1511 miles due east of the launch site, and was continuing to track in that direction at well over 100 MPH. The DTRC network is continuing to send back reports, and 142 stations have sent data. The experimental dashboard that we are using for this flight has been performing fairly well, considering the load on our servers: more than 3 million file accesses in the last 12 hours! Ballast is being used at a higher rate than expected, but we still have 3/4 of our tank left. Feel free to drop by our site at spiritofknoxville.com for more details.

73,
Mike
KJ4Z
Snox Balloon Team
?
This groundbreaking flight of
SNOX IV is now the farthest and
2nd-longest balloon flight in ARHAB.
?
At approximately 10:40 PM
ET the balloon will have been in the air 24
hours.
?
If the balloon stays aloft
after approximately 7:06 AM this will be the
longest flight in ARHAB history.
?
Right now reports are that
the payload is at an altitude around 25-26k
feet and the payload's slowed down as it hits the lowers
altitudes, but
things continue to move
along.
?
Head over to spiritofknoxville.com for the
latest.

Looks like SNOX just won't give up!!!
?
We've gone 2916.8 miles
thus far, shattering the distance record (sorry
Bill) and now as of 7:06 am we're now the longest duration flight
ever
for ARHAB ballooning (sorry,
Robert).
?
Congrats to Dan, Mike, Carl, and the rest of the team who put
this
together and are working on making
history.

Cc: ballooning@yahoogroups.com
gpsl@yahoogroups.com

The Spirit of Knoxville has declared that the SNOX IV amateur radio high-altitude balloon flight is now complete after shattering two world records and landing just shy of the European Continent in its attempt to be the first amateur payload to successfully cross the Atlantic Ocean.

Launched at 10:40 PM Eastern Time on Monday, March 10 (0240Z on 3/11) from Downtown Island Home Airport in Knoxville, Tennessee, SNOX IV traveled over 3360 miles (5310 km) and logged 40+ hours of continuous flight before dropping into the Atlantic Ocean around 1700Z on Wednesday.

The flight ended just after sunset local time as the payload approached Europe. It's last reported position placed it about 350 miles (563 km) southwest off the coast of Ireland.

Although the payload landed just shy of the UK, the mission is far from being considered unsuccessful. Utilizing a 900 cubic foot "Zero-Pressure" balloon designed by Mark Caviezel, NG0X, and a liquid ballast system designed by Carl Lyster, WA4ADG, the balloon was able to take maximum advantage of the jet stream's 100+ mph (160 kph) winds during the first 24 hours aloft. These two designs combined to keep the payload aloft for such a long duration as the temperatures at times dipped to as low as -50F (-45C).

The preliminary data is still being reviewed, but based on the information sent in from listeners and participants around the world, SNOX IV has set new records in both flight duration and distance traveled for Amateur Radio High-Altitude Ballooning, or ARHAB.

Basedon the ARHAB records maintained by Ralph Wallio, W0RPK, SNOX IV shattered the 2-year old record of 1411.41 miles (2271.44km) set by Bill Brown, WB8ELK by more than double the distance. SNOX IV also bested the recent record of 32.26 hours set by Robert Rochte, KC8UCH on August 11, 2007 by about 8 hours.

Listeners from both sides of the pond and from around the world participated by tuning in to the CW beacon and RTTY telemetry on 30

meters. By downloading software provided by the Spirit of Knoxville team, known as the Distributed Tracking and Relay Client, or DTRC, hams and shortwave listeners were able to send their reports back to the SNOX team via the internet, which in turn updated the Spirit of Knoxville web site with real-time tracking of the balloon based on accumulated reports.

At several points in the first 24 hours, demand on the SNOX IV live status page was so high that the page had to be re-worked to a text-based version in order to support the demand.

Even though the balloon set records and nearly made it across, the Spirit of Knoxville team is not going to stop trying to complete the mission they set out to accomplish along with other ARHAB groups in North America. Planning is already underway to get SNOX V off the ground to finish what SNOX IV started.

Everyone is invited to attend a live press conference via the web and the SNOX team will field questions from participants. The chat conference is scheduled for 9AM Eastern Time (1300Z) on Saturday, March 22nd. Please visit http://www.spiritofknoxville.com for more information.

From: "Dan Bowen"
Date: Thu, April 3, 2008 11:30 pm
To: "UTARC Chat"

Hello,
The Spirit of Knoxville V (SNOX V) balloon will launch this weekend
from Knoxville, TN. Please visit http://spiritofknoxville.com for
more information and live flight tracking. This will be the last SNOX
flight this season, the trans-Atlantic jet stream wind is slowing as
warm weather arrives.

8PM EDT Saturday April 5
(0000 UTC April 6)

Thank you,
The Spirit of Knoxville Crew

3237. NE Tennessee w/ 10 watts - Need suggestions

Yahoo group: EastTNAPRS
Date: 2008-04-06 00:17:22 UTC
From: Dan Buchanan
Topic: 3237 Message: 3237

Due to a current living arrangement I am stuck with an indoor antenna to use with my awesome 10 watts. I use a Yeasu 2M all-mode rig for everything since fone modes are boring. Anyway, I can't seem to find a working path that actually hits something. I tried using a my 6db gain antenna outside on a temporary mount and had the same problems. I am currently in Johnson City about a mile from the Med Center. Any suggestions would be great.

what paths have you tried?

it looks like kf4lne-1 is hitting a digi nearby.

check out this website. it will give you lots of good analytical data for your station.
http://aprs.fi/info/KF4LNE-1

its safe to try WIDE1-1,WIDE2-1 as a unproto path. see if it works better. but look at the website first and then you can see if there is a direct digi near you that you can try to work through.

Its not consistent. The digi I can literally see the mountaintop it is on doesn't seem to hear me, but the repeaters up there can hear me nearly full quieting from a HT on 1/4 watt. I used to be able to operate mobile from here with just an HTX 202 and a 1/4 wave. Did something change this past year?

3243. [Fwd: [aprssig] Repeater Frequency Objects +]

Yahoo group: EastTNAPRS
Date: 2008-04-09 20:30:35 UTC
From: David Hoffman
Topic: 3243 Message: 3243

Thought I'd share this with the group...

David Hoffman - KE4FGW

---------- Original Message ----------
Subject: [aprssig] Repeater Frequency Objects +
From: "Robert Bruninga" <bruninga@...>
Date: Wed, April 9, 2008 1:25 pm
To: aprssig@...

This issue was discussed over on the Uidigi list, but it is now resolved and so I am bringing it to the APRSSIG for general info.

The Question was the problem with the "+" symbol in repeater frequency object names. These objects appear to be lost to FINDU, even though they are in the system. You can see the problem by looking at all of the 147.XXX repeater objects. See http://map.findu.com/147.*

Click on one that has a + in the name, and a position map display is not available. But click on one without it, and it works just fine. The problem is that these object names are passed from one routine to the other as URL's and URL's cannot have a + in them. Although this could be fixed by special code in every such URL, FINDU has dozens of routines and is not going to be able to fix this.

Therefore, I have changed all my docs and recommendations to include this info. Meaning, that + works OK on local RF where the objects are most valuable, but that if the digi sysop wants to see these objects via FINDU, then it is not a good idea to use a "+" in the object name.

But it is simple to work around. In any of these URL's simply type the WILDCARD (*) character in place of the "+" and it will usually work. For example. My object is "147.105+D", which cannot be found on FINDU. BUT, if I ask for "147.105*D" then it is found and plots just fine.

The only problem to this I see is that using the wild card, might also find these repeater objects: "147.105SD" or "147.105ND" or "147.105-D"... I cant find any to test this theory.

Anyway, lets get all those local repeater objects on the air.
Se how:
http://www.ew.usna.edu/~bruninga/localinfo.html

Thanks
Bob, Wb4APR

> Recently, I have been asking our local digi

> Skywarn frequency that covers the area.
>
> An example of the Beacon Text is
> !4636.23NS09417.79W#PHG5310/Skywarn Crosslake 147.03+
> Beacon set to every 10 minutes (local only)

Yes, please do! This is part of the APRS LOCAL-INFO initiative.
But actually, there are much better formats. The problems with
the above format are

1) people do not see the freq unless they go look for it.
2) It only shows up under the DIGI's call
3) The freq will not show up on any D7 screens
4) The new D710's will not be able to one-button QSY

Please see the web page:
http://www.ew.usna.edu/~bruninga/localinfo.html
Which recommends a format something like this:

;147.03+SW*111111z4636.23N/09417.79Wr T107 R20m Net T 9pm
Skywarn

Will show up on the front panel of all mobile APRS radios as
"14703+SW
" T107 R20m
" Net T 9pm
" Skywarn

The benefits of this format are:
1) Can have a different position than the DIGI sending it
2) Shows on all APRS systems as an 147.03+SW object
3) Shows the PL tone (T107) (or Toff if no tone is used)
4) Shows the useable Range of the repeater (R20m)
5) Shows weekly net times
6) Shows as a Repeater Object
7) Flashes this info on the screen every 10 minutes locally only
8) Any D710 owner can automatically QSY to this frequency by
simply pressing the front panel "TUNE" button. This will tune
the radio and set the PL for instant QSO.

These formats have been hammered out over the last few years and
work very well. Follow the TXXX format exactly. Do not include
tenths of a Hz. Estimate the radio range in miles (in the USA)
or km elsewhere (R30k).

The "SW" was chosen to make this 147.03+SW APRS object unique in the world. Check http://map.findu.com/147.03* to see what other such objects have already chosen as their modifying characters and choose ones that are unique.

Please spread the word. EVERY APRS digi should be beaconing ONE of these frequency objects to all users in its immediate SIMPLEX range. Normally, the intent of this FREQUENCY OBJECT is to announce the *single*most*recommended*voice*repeater for visitors and travelers in that immediate area. If that is also the skywarn frequency, then that is good.

But if the skywarn channel is a normally dead repeater with a low probablity of users most of the time, then that is not usually a good "most-recommended" repeater for visitors and travelers. Of course, this is purely a local option, and so the digi owner will do what he thinks best. But even in a highly active skywarn area, if another voice repeater (not the skywarn one) is the most commonly used, then I would still vote for listing the most common repeater, because that is where the traveler can find SOMEONE to talk to. And there he can ask what the skywarn frequency is.

The locals all already know what the skywarn freq is. They don't need the frequency beacon. But it is the clueless traveler, visitor, or occasionaly operator that may need this Frequency Object to help him make contact and get local info.

Good luck. This Local Info initiative is sweeping APRS and is very powerful at getting more people involved in APRS by providing more real-time, local info of immediate use.

Spread the word, far and wide.

Bob, WB4APR

A lined box appears around the station I'm tracking, and it shows correct ICON and my station too but it shows in Africa not CO. Every time the map refreshes it goes to Africa.

Sounds like you're running UI-View32.

If that's the case, then Select "Map - Load A Map" from the menu. When the "Select A Map" dialog shows up, select an appropriate map.

As for the Africa map showing up, it sounds like you have a misconfigured map in your maps folder. Each map in UI-View has 2 files in the maps folder; one is the image, the other is a INF file for the image which defines how that image should displayed as a map (i.e., what are the coordinates that the image covers).

I do not remember the maps that UI-View32 comes with by default; everything that I use has been created by providing an INF file for various map images.

You can change the maps that are listed in that dialog box. For full details, open that window and press F1. This will bring up Help for UI-View; the full details can be found there.

From: D. Mynatt
Topic: 3246 Message: 3254

Hi William,

Yes, F1 opens Help but not how to fix things. I can Right Click the Balloon Icon and Center the Map. However, when the next APRS packet is received, it goes right back to the view it was before then. How do I get it to Stay Zoomed on the Object? F1 doesn't answer that as far as I see. That's my problem; I can get the Help okay but not how to fix something if it seems not working -it's the age-old question; is it broke/deprecated/setup wrong/working correctly but not sufficient, or is it Human Error? I fixed the Map issue; now back to CO.

Can you tell me how to keep a Zoom?

Thanks,

Dave

3259. Tracker2 Supported Garmin units

Yahoo group: EastTNAPRS
Date: 2008-05-22 14:03:22 UTC
From: William McKeehan (KI4HDU)
Topic: 3259 Message: 3259

During the BlountECS net last week, several folks were asking about the Tracker2 that Scott, N1VG makes. The key thing that sparked the discussion was that I mentioned he makes a model (T2-135) that works as an add-on board designed to fit the Alinco DR-135T AND with a Garmin nuvi 350 will support messaging, so it makes a really nice bundle.

Following up on that conversation, I exchanged some e-mails with Scott, N1VG about his Tracker2 and have the following information to share.

Here's his web site about the Tracker2.
https://www.argentdata.com/products/tracker2.html

Here's a list of units that can be used for position data and messaging, but not necessarily waypoint display:

http://www8.garmin.com/solutions/pnd/supportedproducts.jsp

Out of those, the nuvi 350 is the only one KNOWN to display waypoints properly (I believe others MAY display wayponts correctly, but they are untested).

For these you need the Garmin fleet management cable. Scott carries both varieties on his site:

https://www.argentdata.com/catalog/index.php?cPath=23_26

Aside from those listed on the page above, the Tracker2 won't work with any of the other USB units.

The older SERIAL units at least as far back as the GPS III+ will work with the Tracker2 for position data and waypoint display, but not messaging. That should include anything with a serial interface that can accept waypoints from MapSource, panel-mount aviation models excluded.

The T2-135 is an add-on board designed to fit the Alinco DR-135T (as well as the -235 and -435) in place of the original EJ-41U TNC. It lists for $75 on his site:
<https://www.argentdata.com/catalog/product_info.php?cPath=22&products_id=55&osCsid=vmrf2iqv4gf18upvcdo1048rm6>

Let me know if you guys have any questions, I'll try to get answers for you.

William

I put together one of these combinations a few months ago and it works great.
Once you have done the initial programing on the T2-135 with Scott's configuration program most other configurations can be done by sending a message with the Nuvi 350. This makes it so much easier to change some parameter that needs a tweak rather than hauling the radio inside or bringing the laptop out to change the configuration.

Scott is also working on a "translator" box that will allow the Nuvi to work with the Kenwood TM-D710/D700 radio but with Scott's busy schedule that probably will not be available until the end of the summer.

I need a volunteer to run the APRS net for the next few weeks. I'll be around for the one tonight, but not for the next 3 weeks (June 2, 9, 16).

Anyone willing to take the net those nights?

Thanks!

Tim M and the group,

Ron sent this link to me that shows the MOBLIE APRS WITH UI-VIEW32 AND THE KENWOOD D700. Maybe this can be of some help.

I'm also sending it to the group since this was discussed on the net just in case anybody else would like to take a look at it as well.

Thanks Ron.

Fellas, there's a new digi in town!

KD4CWB-3 went on the air this afternoon thanks in great part to KD4CWB, K4TJY, and KD4DLU (and maybe others that I am unaware of). The digi is on GreenTop, near the 146.940 repeater site.

Preliminary results look GREAT. I think this digi will do wonders in the area.

With this new digi up, I would encourage everyone to begin to use WIDE1-1,WIDE2-1 on their every day commute.

Thanks to everyone that made this possible!

3280. R.A.C.K. Fox Hunt

Yahoo group: EastTNAPRS
Date: 2008-07-14 10:07:38 UTC
From: Ron Russell
Topic: 3280 Message: 3280

Radio Amateur Club Of Knoxville - FOX HUNT

The date of the hunt is Saturday, July 26th.

All interested should meet @ 9:30ish in the Shoney's parking
lot on Western Ave to instruct newbies on how it all works.

The area will be the oval area formed by I-40 & I-640.

Fox will transmit for 30 seconds then off for 1 minute.

This one is geared more toward the beginning DF'er with a longer
transmit time of 30 seconds (it's usually much shorter!).

The longer time doesn't necessarily make is easier, but it does give the
novice time to hone their skills.

Voice will be on 147.300. The fox will transmit on 146.565 MHz.

Fox will start @ 10am. Fox will stop @ 12 noon.

Then back to Shoney's on Western for Eatin' Meetin'..

Dust off your compass and come join the fun!

Pass it on to all you know and all nets you check in to.

3281. Event announcement via APRS

Yahoo group: EastTNAPRS

From: William McKeehan (KI4HDU)
Topic: 3281 Message: 3281

I know a lot of you are familiar with M0CYP's UI-View add-ons. Well, today I found that he has a program "aprsevents" tat gives you the ability to automatically announce events in the local area. Once configured these announcements will be sent automatically over APRS during the specified time window.

It's available here:
http://www.apritch.myby.co.uk/addon_misc.htm#aprsevents

Have a look at it. Getting this type of information out via APRS makes APRS much more valuable.

Hi Pat,
I purchased a Garmin GPS map 60csx and love it. Easy to program and navigate the menu. Later on I purchased the city streets and navigator program for it. easy to work with and figure out. At the time I got mine GPSonSale was the cheapest place to get it. It doesn't come with a cigarette lighter plug so I got a cable made by gilsson technologies that had the interface cable built into it so I didn't have to make one up. I don't remember the exact place I got the cable but they aren't hard to find. I use mine with my TH-D7ag all the time. No problems at all. When you plug the gps into the Kenwood push the POS button on the Kenwood and it will show Lat and Lon so you know they are communicating. You could also try GPS geek for some accessories and things. Hope all this helps it has worked great for me.

I agree entirely with Steven. I also have the Garmin GPSmap 60 CSX and the mapping software. The truth is, it's quite expensive, but I am very happy with it. I bought mine on sale from Amazon.com Any GPS which has NMEA serial port output will work. Issues for you to consider other than that include need to see a map vs one without a screen (GPS receiver only--no screen)such as the Garmin GPS18PC or Deluo and of course the cost you can afford. Of course the ones with a screen and self powered can be used away from the vehicle (DC battery power supply) or used alone without the radio. Appropriate cables are available several places. The Garmin GPSmap 60 CSX uses the same round port connector/power cable that I used for my first Garmin GPS which was a GPSIII+, which I still use sometimes. I have 5 GPS units. Normally I use the Deluo for day-to-day operations in my APRS mobile. It is not as likely to entice a theft, is low profile, and lives on my dashboard. Hope this helps.

3286. Re: GPS Info

Yahoo group: EastTNAPRS
Date: 2008-07-21 14:15:19 UTC
From: William McKeehan (KI4HDU)
Topic: 3282 Message: 3286

The reason that so many GPS units exist is because there is not one unit that would make everyone happy, so many have been created to give you options.

Now, to use a GPS unit with the Kenwood TH-D7 (or the TM-D700/TM-D710), the unit needs to support one thing: NMEA serial output. Anything beyond that is personal preference.

If your goal is to have a tiny GPS, then one option would be the Garmin ForeTrex 201; see a review here:
http://wa8lmf.net/ForeTrex/index.htm

If your goal is to use the unit in your vehicle and you want a large display, then you may want to look at the AvMap units: http://www.avmap.us

Personally, I use a Garmin GPS V in my truck - not the biggest display on the market, but for the price, I found it reasonable. It's black and white - if I had to do it over again, I would go with a larger color screen.

On my motorcycle, I use a Garmin GPS II+ - an older unit with a limited display that sits in the trunk on the bike most of the time and functions like a hockey puck.

When I'm walking around, I carry a Garmin eTrex Legend (the blue one). Again, this display is pretty small and black-and-white.

Any help?

3287. Fwd:2 Meter High Power APRS transmitter from BigRedBee

Yahoo group: EastTNAPRS
Date: 2008-07-24 12:53:53 UTC
From: William McKeehan
Topic: 3287 Message: 3287

This looks like an interesting new APRS tracker on the market.

Subject: [aprssig] 2 Meter High Power APRS transmitter from BigRedBee
From: "Greg Clark" <K7RKT@...>
Date: Thu, July 24, 2008 2:35 am
To: "TAPR APRS Mailing List" <aprssig@...>

BigRedBee, LLC
http://www.bigredbee.com
7/23/2008

BigRedBee, LLC is pleased to announce the world's smallest, completely integrated 5 watt 2 meter APRS/GPS transmitter.

Features include a frequency agile 2 meter RF transmitter (144 - 148 Mhz), integrated SiRFstar III GPS with patch antenna and 5 watts of RF power output. All on a single board measuring less than 1 1/4 x 3 3/4 inches.

The high sensitivity 20 channel WAAS capable SiRFstar III GPS allows operation in areas where GPS reception is troublesome, including "urban canyons", wooded areas, even inside buildings.

Nonvolatile on-board memory stores more than 1000 waypoints at a user selectable rate which can be downloaded as a .kml file viewable via Google Earth.

An integrated voltage regulator allows direct connection to an automobile (or any unregulated 12V) power source For truly portable operation, you may also provide power (4-9 volts) via (2) lithium-poly (7.4v) or (6) alkaline batteries (9.6v).

The transmitter supports fixed beacon rates, time slotting and SmartBeaconing (TM) for dynamic transmission rates based on speed and heading. For periodic operation, the GPS power may be powered down resulting in longer battery life.

For "high flying" projects, Trimble's Lassen IQ GPS module is also available for an additional cost, allowing battery powered operation above 18,000 meters.

Just plug in your SMA antenna and 12V power supply and you are on the air!

Pricing:
========
A BeeLine GPS 2MHP package deal is available for just $275, which includes a water resistant plastic case, automotive (cigarette lighter) power adapter and an RS-232 serial programming interface.

RF transmit antenna and batteries are not included.

Availability:
==========
The BeeLine 2MHPGPS is available now, but built to order.

Please visit http://www.bigredbee.com for more information including detailed pricing and ordering information.

73,

Greg Clark

For that price, you might as well buy a TH-D7 HT & a GPS.

I did not remember how much the TH-D7 costs, so I did a bit of searching.

I can't find it on Gigaparts and I can't find it. I also looked at HRO - no TH-D7.

So the price is about $50 less than the TH-D7, with a basic GPS, it's about
$100 less than a TH-D7/GPS combo.

I guess the real value in this package is that it's compact.

If they would take it one step further and make a "case" for the unit that
doubled as a magnet mount antenna (i.e., totally self contained unit), then it
would be IDEAL for a tracker unit to deploy on vehicles at various events.

3296. Re: TNC-X and Xdigi

Yahoo group: EastTNAPRS
Date: 2008-07-30 01:22:54 UTC
From: tennesseestargazer
Topic: 3277 Message: 3296

I have version 2.0D of Xdigi running on the tnc-x digipeater project. Version 2 adds remote sysop commands. When you set the Xdigi up, you enter a password. The Xdigi uses a random number generator to create a response code. You enter your original password and the Xdigi's response code into a javacalc program to get a counter response code. This code allows remote access. You have to enter your digi's caal and ssid in the unproto setting in a terminal program and enter converse mode with the Xdigi to send the access code.

I had problems programming the firmware to the microcontroller, but I found a setting I had wrong that was messing with the eeprom in the chip. Once I resolved that... things work!

3301. Wind power for charging batteries?

Yahoo group: EastTNAPRS
Date: 2008-08-14 23:42:49 UTC
From: tennesseestargazer
Topic: 3301 Message: 3301

I'm looking at a location for a possible digipeater. It would be nice not having to rely on commercial power for operation and battery charging. Solar is a possibility, but panel costs and the hours of sunlight available mean larger panels to deal with the hours of daylight. Since the location is on a mountain, wind power may be a better choice. What are your thoughts on this?

3302. Re: [EastTNAPRS] Wind power for charging batteries?

Yahoo group: EastTNAPRS
Date: 2008-08-15 03:41:32 UTC
From: Jonathan Culver
Topic: 3301 Message: 3302

I think it would be a great idea, it might also be wise to look into a hybride system with solar and wind power if the wind isnt consitant enough. I know that the Oak ridge Ameatuer radio club has had a solar powered repeater, but I m not sure if it is working right now I know they had some poblems a while back. Another thought is that a wind turbine system might even cost more than solar along with it having the potential of being an eye sore. But that all depends on its location.

The net tonight was very short. There was one discussion topic and I thought it would be a good idea to bring that topic to this group.

Apparently it is difficult to find a new Kantronics KPC-3+ right now. It may be being replaced by an MT-1200 (or the MT-1200G).

Anyone know anything about this?

3319. GPS Problem

Yahoo group: EastTNAPRS
Date: 2008-09-30 12:35:28 UTC
From: William McKeehan (KI4HDU)
Topic: 3319 Message: 3319

I've got a problem with the GPS on my motorcycle.

The GPS is a Garmin eTrex Legend (the blue one).
The Radio is a Kenwood TM-D700.

The GPS sits in the trunk on the motorcycle along with the radio. It is connected to the radio via a short cable - about 18" long.

Just in the last couple of weeks the GPS has started to mess up when the Radio keys up. The GPS will get a position lock, then the radio sends out a beacon after which the screen on the GPS goes nearly blank (sometimes it has a black verticle line down the otherwise blank dislay).

Anyone have any ideas what could be causing this? Or more importantly, what I can do to make it stop?

Thanks!
William

William;

Sounds like an increase in the RF level at the GPS.

Check your grounds, coax connectors & position of the coax in relation to the GPS.

Check the SWR on the Antenna.

That may not be it, allthough that sounds likely.

I say this because my daughter's blue eTrax Legend started doing the same thing. She described it to me while out with it on a GPS day camp (no RF in area). I played with it later and discovered there seems to be no ryme or reason to it's going blank like this. Very frustrating. We've just quit using it.

Topic: 3319 Message: 3324

I did not have a chance to check things out last night, so I tried a simple experiment on the way to work this morning. I turned on the GPS like normal, but did not turn on the radio. When I got to work, I found the GPS in the same state that I've been seeing.

So my guess is that it is something wrong with the GPS unit itself.

Anyone want a cheap eTrex Legend? :-)

Thanks for all of the suggestions guys,I think I will take the time this weekend to double-check all of the items mentioned here. I'll be in there changing out the GPS, so it will be the perfect time to have a look around.

3327. UT Digi

Yahoo group: EastTNAPRS
Date: 2008-10-06 18:24:37 UTC
From: Jonathan Culver
Topic: 3327 Message: 3327

Just putting this out there.
There was so small discussion about having a digi put up on the UT Campus a while a go and the club was still a bit curious if it was something that was still needed.

In the past we have allowed the use of our facilities for special events that needed downtown coverage. But would it be something that a Permanente unit would be helpful and as William put it help act as a filler for other areas.

I believe we has the majority of the equipment and a possible location for the unit we just need to know if it is worth putting the time into it?
Please lend me some feedback.

I think it would be very helpful. The Knoxville Marathon is one of those events that benefits from having a digi at that location. The next Knoxville Marathon is March 29, 2009. That's only 174 days away.

Especially with the W4ACA digi having been down for
months there are lots of dead spots that a wide1-1
fill-in digi would fix.

I took a few minutes this past weekend and checked things out on my bike. SWR on the antenna is reasonable (1.3) and all connections appear to be tight. Changing the GPS out for my older Garmin GPS II+ seems to have corrected the problem.

Thanks for all of the information!

From: William McKeehan (KI4HDU)
Topic: 3327 Message: 3332

I hope to hear from more people on this topic, but I'll go ahead and put in my two cents.

I do not believe that we need a new WIDEn-N digi in the area (with the exception of needing one North of Knoxville to take the place of W4ACA-7).

However, I do believe that a "fill-in" digi (i.e, one that responds to WIDE1-1 only) at the UT location would provide some additional coverage in the downtown Knoxville area.

I look forward to hearing others thoughts on this matter.

3333. Systm - a video podcast

Yahoo group: EastTNAPRS
Date: 2008-10-08 13:37:31 UTC
From: William McKeehan (KI4HDU)
Topic: 3333 Message: 3333

This not really APRS related nor Ham Radio specific, but it's something that I think many in this group may find interesting.

The web site Revision3 has a show (video podcast) called Systm. Their description of it is:

"Systm is the Do It Yourself show designed for the common geek who wants to quickly and easily learn how to dive into the latest and hottest tech projects. We will help you avoid pitfalls and get your project up and running fast."

The URL for the show is: http://revision3.com/systm

I decided to post this here after I saw Episode 57 - "DIY Portable Power Pack Keeps Your Toys Running"

So for the guys out there that like to play with building stuff, this show is interesting to watch for ideas and tips. Their content is not geared toward the master builder, but rather the novice, so their projects (the ones that I've seen thus far anyway) are pretty simple.

Let me know what you think.

3337. Temporary test of digi

Yahoo group: EastTNAPRS
Date: 2008-10-19 16:02:56 UTC
From: tennesseestargazer
Topic: 3337 Message: 3337

I am driving up to the I-75 exit where I plan on installing the digi. This is only a test for about a hour. I also have a 50 watt PA that I plan on installing with the digi when I have a permanent location. I'll be monitoring the 146.940 and the 147.360 while I'm testing. The Digi's callsign will be KG4UJC-3.

I saw your beacon on Findu when you were testing. It looks like you
are just north of the hwy 63 exit. That looks like a good location and
should give much needed coverage in that area. I also saw your beacon
from Bandy Creek a couple of weeks ago but I could not determine if
you were getting into an I-gate from there. My QTH is 6.7 miles due
south of the campground so I was getting you via RF. I was hoping
that you would be able to get into one to see if it would be possible.
I have been planning to put up a digi in the Jamestown/Oneida area to
provide coverage in the BSF area, but have not had the time to do
anything but plan. I have access to some towers in the area so it is
just a matter of getting everything together and doing it.

3343. APRS Messaging expanded

Yahoo group: EastTNAPRS
Date: 2008-11-03 01:19:56 UTC
From: William McKeehan (KI4HDU)
Topic: 3343 Message: 3343

Tonight on the net I mentioned a bit about some recent changes to APRS Messaging.

I would like to encourage everyone to have a look at this page by Bob, WB4APR:
http://www.aprs.org/aprs-messaging.html
It talks about where Bob would like to see as the future of APRS Messaging.

One change that has been implemented is that it is now easy to send and receive APRS messages via the internet.

A couple of things that I mentioned on the net tonight were that findu.com now has web based messaging. Give this URL a try:
http://www.findu.com/cgi-bin/entermsg.cgi
Make sure to use a Callsign-SSID that has not been on RF recently for best results.

I also mentioned that www.openaprs.net has messaging support. If you like aprs.fi, you may find openaprs.net to be a very nice APRS interface, give it a try (registration required, but free).

I look forward to chatting with you all next week.

Well it looks like it gone for good.. at least as far as I can tell...
Jeff is working 8 days a week it seems with a new job.

Plus he has 2 new grand kids so.... ham radio has been demoted.

LOL

3354. Sunday Night Net Topics

Yahoo group: EastTNAPRS
Date: 2008-12-15 20:02:16 UTC
From: William McKeehan (KI4HDU)
Topic: 3354 Message: 3354

Over the past few weeks to a couple of months, I've found nothing really to talk about on the Sunday night APRS net, so I thought I would take a few moments and reflect on what is invovled in APRS and perhaps uncover some things that we have not discussed.

What is there to APRS? Well, in broad terms, we have internet operations, system setup, RF setup and the network.

For internet operations, we've talked about the various APRS related web sites such as aprs.fi <http://aprs.fi/> (my current favorite), openaprs.net <http://www.openaprs.net/> (a close second for me) and the ever-popular findu.com <http://www.findu.com/> . These are growing in functionality as of late; you can use them to send/receive messages without installing any APRS software. One of my favorite pages is the bulletin pages at aprs.fi <http://aprs.fi/bulletin/> that shows you APRS bulletins and announcements or the last 24 hours.

Once you progress beyond the web based operations, you will typically setup some APRS software on a computer

We've talked a fair amount about setting up UI-View32 <http://www.ui-view.org/> on the nets and by now, anyone that is interested in doing that probably have done it.

I've mentioned that I run an alternative APRS client, XASTIR <http://www.xastir.org> . We have not reallly discussed that tool very much, but I've not seen much interest in the topic either; it's an application that is currently in development and is designed primarily for Linux although several options are available to run it in Windows.

Playing on the internet is fun, but we're amateur radio operators, so setting up your system to function on RF is generally the next step.

In this area, we have talked about how easy it is to get up and running with a receive only station using a soundcard and a receiver (and how easy it is to take that to the next step with a tranceiver). Our general recommendation for the soundcard interface is to build-it-yourself (receive only requires a single audio cable) or pick up something like the Rascal from Buxcomm <http://www.packetradio.com/catalog/index.php?main_page=index&cPath=2> to make your life easy.

We've looked at "typical" mobile operations and most people have found that the Kenwood equipment (the TM-D700, TH-D7 and the new TM-D710) is the easiest to setup and get working. I do not know if anyone in the area has an alternative "fully functional" mobile APRS setup (i.e., the HamHUD or the T2-135 with a messaging capable GPS), but we have

discussed them as options.

We've discussed several options for setting up trackers, looking at different hardware such as the TinyTrak stuff from Byonics <http://www.byonics.com/> , the OpenTracker from Argent Data Systems <http://www.argentdata.com/products/tracker2.html> , and the TNC-X <http://www.tnc-x.com/> . We've even heard a few reviews of the assembly and operation of some of these units.

We've talked about antenna set-ups for mobile (including my Motorcycle setup ad nauseum), portable and home stations. Concluding that with digital communications, more is better.

We have talked about how APRS is more than just vehicle tracking. Everyone has been encouraged to create object/bulletins to notify everyone about amateur radio related goings-on.

I have a process which publishes objects and bulletins about local nets to help everyone remember when they are happening and to let visitors know about their availability. (See here: http://mckeehan.homeip.net/javaprs/announcements.php <http://mckeehan.homeip.net/javaprs/announcements.php> to see which specific nets I have automated announcements for)

With all of the information that we've discussed publishing, we've talked about appropriate packet paths (WIDE1-1,WIDE2-1 for mobile stations and WIDE2-1 for home stations) and data rates (1-2 minutes for mobile stations and 15-30 minutes for home stations) to avoid overloading the RF channel.

I run a "APRS HOG" application (not as regularly as I should) which monitors the local packets and will let us know who's hogging the available bandwidth. The results can be seen here: https://mckeehan.homeip.net/javaprs/usage.html <https://mckeehan.homeip.net/javaprs/usage.html> .

As a collective group (I personally had very little to do with it), we have greatly improved the network in the area, making it completely compatible with the new WIDEn-N paradigm. We do miss W4ACA-7, and hope to see a new KG4UJC digi North of Knoxville in the near future.

The area is well covered with IGates and messaging to/from the APRS-IS seem to flow pretty well.

So where does this leave us?

We have everything that we need to be using APRS to enhance our amateur communications, all we need to do now is use it and get more people to use it.

BUT, this started out as a way for me to brainstorm about topics to discuss on the Sunday night nets. While this has brought me many good memories of the group and many of our nets, it has not left me with any

ideas about what we should discuss.

So I'm posting this to the group. What would bring you to the radio on Sunday night? What topics would you like to hear discussed? Or is it time to bring this net to an end? I posted this question a couple of days ago, and have not received any responses, so I'm thinking it may finally be time. Do let me know your thoughts.

Thanks for the insight!

William

I hate to hear that the digi may not return to service, but I can understand how work and family would take priority over amateur radio.

Does any one have any contacts in the Oak Ridge Amateur Radio Club that may be able to get access to the site to investigate the situation with the digi and possibly replace it?

Another option would be to get a digi somewhere up in that general area...anyone have any connections up that way?

That would be much appreciated!

The digi has been down for a while, so it's not an emergency that we get it back up, but there are some events during the year where that digi was very helpful, so it would be nice to have it on the air again.

Let us know what you find out.

3358. KS4NG-7 DIGI

Yahoo group: EastTNAPRS
Date: 2008-12-17 05:33:11 UTC
From: veetwin88b
Topic: 3358 Message: 3358

East TN APRS Group,
The KS4NG-7 digi on Jewel Mountain, near Erwin, has been down a while with no TX. It will hopefully be back on line in a few weeks or sooner. For those interested, the setup includes an early model Kantronics KPC-3 Plus with a firmware upgrade installed before putting into operation, an Alinco DR 140 PKT transceiver set at 50 watts power. It has been in continuous operation since 1998 with only a slight change in it's beacon and parameters via remote access. 10+ years untouched continuous operation needs to be recognized, eh? I'm sure there are others, especially some of the MFJ 1270 series tnc's doing the same thing? Anyone else have a great setup that needs an honorable mention?

Bob Thomas, KS4NG

APRS packeteer since 1994

There are also two high profile repeaters located near there. Has someone approached either of those repeater owners? If their site manager allowed, we could have the potential for an extremely large footprint on the north end.

I'm not up in that area very much and do not know a lot about the repeaters/HAMs in that area. So I've not talked with anyone up there. I believe this digi was co-located with the 146.880 (?).

But I've not talked with any repeater owners. If you have any contacts, by all means, chat with them and see what our options may be.

Thanks!

William,

I would be happy to, but I am not familiar with the owner of the
KA4OAK repeater.
Also, I have not had any positive discussions with the owner of the
145.470 repeater.
However, at the risk of volunteering someone, I believe that N4CQW is
familiar with both of those systems.

Thanks,
John

I've said many times, that the digi's are what makes APRS work. I applaud your efforts to have a digi on the air continuously for over 10 years and say congratulations for having a setup that is solid enough that it did not need modifications during that time.

There are some other digi's that have been around for a while, WA4KJH-7 comes to mind, but since my involvement has only been a few years, I can't say how many have been around for 10 or more years.

Congratulations and thanks!

Here we are, less than 2 weeks to another year. Time does pass faster as we get older.

I'm still working on my digipeater project. The original radio planned for it died. I found another radio, but I'm going to mount it in my truck. Last night I purchased another radio that will be used for it. I still plan on a location north of Knoxville near I-75 close to the kentucky border.

I received last week a few gps engine boards. I posted a pic of one in the photos folder in my KG4UJC directory. I have not had time to experiment with it yet. Maybe during the holidays with my time off.

Anyway... HAPPY HOLIDAYS EVERYONE!!!! Check out the following link for some great Christmas music.....

EastTNAPRS Group,
Due to the distance, I can't get into the 146.94 repeater, except very scratchy under the best of conditions. So, I've had to just listen, when able to do so. Having said that, please now understand why I'm posting this note about "APRS Base Antennas for the QTH" for our APRS group. 1/4~ and 5/8~ antennas are OK for mobile, but totally unacceptable from my QTH for any 2 meter work. My six element beam does pretty good but nothing has ever matched the 7 element "Opalized" quad I used to use for packet back in the 90's. That one allowed me to have a lot of fun with packet as well as check in to Knoxville nets with a 5 watt HT here from Flag Pond. It also allowed me to pick up some DX APRS networks via meteor scatter once as far as Kansas. Also, remember those balloons launched from Alabama that we used to track?
Now days, here at the QTH, my best packet antenna is a 13 year old fixed 4 element quad constructed on a PVC frame using bronze welding rods soldered together for the elements. It has been very tough and has a good radiation pattern that's not too narrow when blown around in a wind storm. That antenna is based on a quad design from an old ARRL Antenna book that was built on a wood frame. The PVC framework does much better. Also, if I built over today, it would have a computer optimized spacing for the elements and optimized element dimensions incorporated into it, instead of the spacing once used for yagis that was somewhat OK, but not best. Painted green, the quad is hardly noticeable with mountains in the background behind my house and now resides in our rose garden. The white PVC frame was a little repulsive to my wife, Debbie, ke4vgk. It now looks like a custom bird perch and toe warmer.
The "opalized" 7 element quad began as a sharp shooting 8 element design using an aluminum beam for support, PVC element supports, and bronze welding rods for elements. It took a hit from the remnants of Hurricane Opal, overloaded the mast, then lost the #6 director as a result of a nose dive into the ground. I took it down several years ago in favor of an eye friendly optimized 6 element yagi.
It is fun and rewarding to build antennas based on simple designs that require little maintenance and have awesome performance. In my opinion, a good QTH APRS station should have a beam type antenna that will track distant and weak stations as well as link to local nodes. I encourage those who are able, do a little research, buy about $15.00 worth of hardware, then construct an awesome antenna for your QTH and enjoy our sevice and hobby even more. Buying an antenna would take the fun out of it for me. That's a good choice for the "time challenged", though. A "green" project would be to recycle an old TV antenna into an awesome beam antenna for two meters and cost less than a few bucks to re-assemble.

Of course, one should consider their location and terrain when considering antennas for APRS packet. For some, a good omnidirectional might be OK. I've never found one to work for me, though. We used to be scattered widely apart during the early days of APRS and beams were required for many of us.
If you folks hear me check in to the APRS net some Sunday night you'll know I've been building antennas again! Any other observations from the group?

Happy New Year and God Bless,
Bob, ks4ng

3368. Let's improve APRS

Yahoo group: EastTNAPRS
Date: 2008-12-31 16:14:38 UTC
From: William McKeehan (KI4HDU)
Topic: 3368 Message: 3368

I was reading a post from WB4APR where he discusses what "we" should be doing with APRS. Below are a few things that he suggests and my comments about how well I think we are doing this in East TN.

EDUCATION:
1) One fixed path (WIDEn-N with small value of N)
I see a few stations running with a WIDE3-3, but nothing higher than that, so I'm OK with that, but I personally recommend WIDE2-2 or even WIDE2-1 for the local area since our digi's cover such a large area.

2) Now there is one mobile path (WIDE1-1,WIDE2-1)
In doing some spot checks I think most of our mobile stations are following this recommendation.

3) Now there is one WEB SITE (www.aprs.org)
I think this may be new to many people here. WB4APR has moved his web site (which some people outside of the US had problems reaching occasionally) and has put all of his content on the www.aprs.org web site. If you have questions about APRS, this is now the definitive place to find answers.

4) Every digi should show Wn, SSn-N for its area
We are showing W3 for our digi's. I guess that indicates that we support up to a WIDE3-3. This seems OK to me, but remember, every hop that you add increases the number of stations that hear your packet exponentially, so make sure that you have a need for a long path before you use it.

In this area I would add packet RATE as well as path. We have one station (KF4ZUX-4) that is transmitting weather VERY often (once per minute?). I would suggest that this be changed to once per 5 minutes or less often; I personally transmit my weather once every 15 minutes and that seems to be more than enough. Other than that, everyone seems reasonable. My recommendation for home stations is once every 30 minutes for normal operations and once every 10 minutes as a maximum. My recommendation for mobile stations is once every 1-2 minutes while mobile.

LOCALINFO:
Important local info for travelers and first responders transmitted DIRECT or at most 1 hop:
a) Locally recommended voice freq (direct, no hops)
KD4CWB-3 transmits an object for 147.195, so we have this covered.

b) Local IRLP, Winlink and EchoLink nodes
I'm not putting out any objects for these things and a I do not notice any with a quick look at my map.

c) Local net times and meetings
I try to cover this by transmitting objects/bulletins about these known weekly events:
http://mckeehan.homeip.net/javaprs/announcements.php
If I'm missing any or if any have changed, please let me know.

I would like to see people posting objects/bulletins about monthly or irregular meetings (i.e., hamfests). To create these objects/bulletins, you do not need to be the "owner" of the event, just a fellow-ham with some knowledge to share. So if you know of something that a ham would be interested in create an APRS object/bulletin about the something to let everyone know.

Listening to a net and hear announcements? Translate those to APRS Bulletins and send them out. The more of this information that we can get out via APRS, the more valuable APRS will be to everyone.

d) Incident and traffic reports and objects
I would love to see more of this, but I do not know an easy way to generate the content. Let's discuss some of this and see if we can come up with some cool ideas.

e) Voice calling freq of every operator on the air including one-way trackers! (freq in beacon)
There are many times that I do not do this - that's because there are times when I'm mobile and do not have a radio tuned to a voice frequency. Otherwise, I agree with Bob, if you are monitoring a frequency, it's a good idea to include it in your position beacon.

Bob had a few other things around his "UNIVERSAL MESSAGING" push, but in my mind, that's a pie-in-the-sky idea that will take a fair amount of work to complete. If you are interested in learning more about that initative, see detailed information on his web site:
http://www.aprs.org/aprs-messaging.html

The above things are things that we can work on improving today, so I would like to encourage everyone to do so. BTW, if you see things that I could do better with how I use APRS, please, let me know about it.

I look forward to hearing your comments.

William

Hello Ron,

I was looking on the http://aprs.fi website for aprs activity in Wyoming. I only see 10 digipeaters in the state and about the same number of stations. Not many hams in wyoming using aprs. The closest to you is NE7WY-8 in Spotted Horse.

I am working on setting up a digipeater near where I am in Knoxville Tennessee to fill a gap on I-75 close to the Kentucky border. If you are wanting to do mobile APRS to broadcast your position, I would use a tinytrak 3 from http://www.byonics.com/ . The kit is easy to build. You connect a gps to the TT3 and the TT3 to a tranceiver. To set up your weather station on aprs, they make the wxtrak to do that.

The digipeater I am building is based on the tnc-x at www.tnc-x.com with the xdigi board. At home, I run ui-view over the internet.

Good luck on getting your ticket.

Digipeaters come in 2 "flavors", TNC controlled or computer controlled. A TNC controlled digi is a transceiver, a TNC (Terminal Node Controller) and antenna. The TNC is half modem and half computer. It basicly takes what if hears from the receiver and retransmits it. It is a simplex repeater. A computer based digi does the same, but uses a computer to do the controlling. The soundcard is the interface to the radio. You have to run software like AGWPE and UI-View, Digined or other APRS programs. If you plan on setting up a digi in a remote location, I would run a TNC based system. It's less likely to crash and requires less hardware. Lower power requirements too, so a solar power charging system for batteries could be used.

3380. Notes from Sunday's Net

Yahoo group: EastTNAPRS
Date: 2009-01-20 15:59:33 UTC
From: William McKeehan (KI4HDU)
Topic: 3380 Message: 3380

Well guys, my schedule finally allowed me to be on the Net this past Sunday night. We got started a few minutes late because the repeater was in use @8, but we had a good bit of discussion.

The biggest thing that happened was that Bob, WB4APR made his way into the area during the net and joined in.

There were a couple of things that he wanted to make sure we all were aware of.

The first is his "Amateur Radio Universal Text Messaging/Contact Initiative" As you can imagine, he's pushing for APRS to be a major player in this initiative, but he wants to expand the idea so that any amateur can send a short message to any other amateur simply by knowing their call sign. Much has been done and more is being done. More details can be found on his web site:

http://aprs.org/aprs-messaging.html

The second thing that he was excited about was the TinyTrak4 from Byonics: http://byonics.com/tinytrak4/
They now have a display that can be connected to the TinyTrak4 making it a 2-way device. And it can be purchased in kit form for less than $90. Check it out.

3387. KC4LU-3 Digi is active

Yahoo group: EastTNAPRS
Date: 2009-02-08 14:54:36 UTC
From: John
Topic: 3387 Message: 3387

Hello all.

I would like to announce that the KC4LU-3 digi is currently on the air.
It is located on Clinch Mountain at the Lakeway ARC 147.030 W2IQ
repeater site.
It should fill the gap between Greentop, Greeneville and the Tri-Cities.

It is using a KPC3+ V8.3 through an Icom 2100, and is currently running
about 15 watts. It is also on battery backup.

73,
John

Topic: 3389 Message: 3389

Hey guys I'm back on the air in Johnson City, K1LNX-1 (Xastir) and K1LNX-10 (my Igate). I'm glad I save my emails because I was able to refer to KI4HDU's Xastir/AX.25/remote TNC solution that he wrote almost 2 years ago!!! Still going strong William! :)

I bought a house last year and haven't taken an opportunity until now putting my antenna and equipment online, been a busy year. Perfect weather for doing so today as well, c'mon spring stay permanently!

On another note, this is is a question for Bob, KS4NG, is your digi still down? I don't see it on the map... Hope you can get it back online soon if so. I think I'm in a worse location RF wise versus my previous QTH, I don't seem to hear as many packets, but oh well I'm on the air lol. Better than nothing I suppose.

Here's my setup:

Debian 4.0 Etch running javaaprssrvr to a TNC-X (KISS) and an Icom IC-2200H
Ubuntu 8.04 running Xastir and remserial to connect to the Debian box

I hope to get digi_ned on there at some point in the future (may play with it tonight) and run a WIDE1-1 fill in digi. Too bad I can't hit the Knoxville machine from here, I'd love to check into the net...

Stephen,
My KS4NG-7 digi is down for repairs.... looks like a few more weeks. I have too many irons in the fire. I'd like to talk to you sometime before it goes back up about your setup and packet programs you're running.

John,
That was the exact question I was going to ask... if it was where Ken's digi was located. Looks good. At one time that digi was linked to KC4UBY-?? here in erwin and was the first weather node network in Tennessee. We were running a program that would display weather images sent by the weather station in Morristown. Ks4ng-7 is located where KC4UBY-?? used to be, so we'll have a very good APRS link. My digi is down for repairs.... Does anyone in our group have any suggestions as to where to send my Alinco Dr-140 for service?

Sounds good Bob, good luck with the repairs, hope to see it back online soon!

> I forgot to ask... do you see Danny Herman's K4DHT APRS digi in Mountain
> City? Good to see you back!

Yes I have, it's been on the air for quite some time now. Don't know
the particulars of how it's setup though. I'm not able to hit it from
my house, I live (literally) right behind Buffalo Mountain off
Cherokee Rd in Johnson City so I'm in a bit of an unfriendly RF zone,
but my packets still make it to the network :)

I hope to play some more with digi_ned this weekend and establish a
permanent WIDE1-1 fill in digi.

Lots of fun!!!!

3395. Kenwood TM-D710

Yahoo group: EastTNAPRS
Date: 2009-02-15 20:45:04 UTC
From: Rusty
Topic: 3395 Message: 3395

All,

I am interested in purchasing a Kenwood TM-D710. Can anyone offer any advice on this? Like should i save my money and purchase something different or should i look for a used TM-D700 instead...

I just want some advice before I hit the purchase button and spend $500+ on a radio...

Thanks!!!

Topic: 3395 Message: 3396

Luv my 710 Here is a list that I saw:

A) the ability to tune to a freq in an APRS packet

B) sort the list of APRS reports.

C) ability to flash upgrade bug fixes and new features via software

D) ability to use the TNC with an APRS application and still use
the control head in APRS mode...

E) The display head can be detached and used stand-alone with
ANY radio, scanner, HT or anything with audio RX or TX since the
entire APRS functionality and TNC and serial port is totally
contained in the display head, not the radio. Take it inside an
plug into any old HT for continuing operation in doors.

F) This TNC/Display head can be used like any other TNC for any
packet application but not only for 1200 but also 9600 baud with
any radio.

G) The D710 outputs the full APRS symbol set out the GPS port so
that GPS devices such as the AVMAP G5 will display all other
APRS stations with their full APRS symbol set, not just a
WAYPOINT symbol.

H) The D710 Display head can be a WX station. Just plug in a
Peet Bros or DAVIS WX station and set it to WX mode.

I) The D710 can not only sort the 100 deep station list by CALL,
by TIME, by Distance, but it can also FILTER by TYPE. SO if you
want to see JUST the digipeaters, or just the WX stations or
Just the mobiles, or just the objects, that is only a few
buttons away.

J) You can FILTER by the same above types. This lets you
capture an entire 100 deep list of just the selected TYPE you
are interested in....

K) The D710 defaults to New-N Paradigm settings.

L) The D710 has Smart beaconing, and Proportional pathing, and
Decay to vastly reduce network loading.

M) The D710 has multiple user defined message phrases that can
be easily edited into messages with a few key strokes.

N) The D710 uses a microphone with RJ45's on BOTH ends so you can remote the mic any distance. The control head uses RJ45's so you can remote it any distance with common pre-fab RJ45 cables...

O) The D710 has a new button to avoid the old push-n-hold Function key to make it much easier to access all data and menus.

P) The D710 display is 8 bytes wider than the D700
BTW - credit this list to Bob, WB4APR

Mon Feb 16, 2009 5:35 pm (PST)

They're finally finished, tested, and ready to ship!

https://www.argentdata.com/catalog/product_info.php?products_id=113
<https://www.argentdata.com/catalog/product_info.php?products_id=113>

This cable connects a Garmin nüvi 300 series, StreetPilot c340, StreetPilot 7000 series, StreetPilot 2820 series, StreetPilot 2720 series, or zumo 400 and 500 series navigation receiver to the Kenwood TH-D7A, TM-D700, or TM-D710 radio.

Output is NMEA at 4800 baud with GPRMC, GPGGA, and GPGLL sentences. Waypoint input is accepted in GPWPL or Kenwood proprietary format. Please note that only the nüvi 350 is so far known to display received waypoints properly - other models may display duplicates for moving stations, or no waypoints at all.

Set your radio's waypoint name length to 9 characters, and set the format to NMEA for the D7 or D700, and Kenwood for the D710. Symbol, altitude, and course/speed information for waypoints is available only from the D710.

UTARC Members--

As you are aware, we held a successful one-day class for the
Tech/General exams this last weekend. With the instructional guidance
of Rick Blasco (NX6R) and the testing team lead by Willard Sitton
(W4HZD), please welcome the newest group of Amateur Radio Operators to
the UT Campus.

Note that two of the group are UT faculty members!!

3402. Knoxville Marathon Opportunities

Yahoo group: EastTNAPRS
Date: 2009-03-13 13:30:07 UTC
From: William McKeehan (KI4HDU)
Topic: 3402 Message: 3402

Guys,

The 5th Annual Covenant Health Knoxville Marathon race is scheduled for March 29.

The event will consist of the marathon, a half-marathon, a 5K run, a 4 person relay and the Covenant Kids Run.

As in the past, amateur radio operators will be providing communications for this event. David, KE4FGW, is coordinating the communications for this event. If you are interested in participating, please contact David at meters (at) ke4fgw.net.

APRS plays a small role during this event. In the past, I have setup a temporary digi in the UTARC Shack using their antenna on the stadium to provide some additional coverage for the event.

I think that setting up a temporary digi for events like this is a fun exercise and I would like to open this opportunity to someone else if anyone is interested. If no one is interested in doing it, I'll follow-up with the guys at UTARC and get my temporary digi in place for the event.

Let me know if you're interested.

William

3405. Connecting to AJ4HV-10 using ENGMTN

Yahoo group: EastTNAPRS
Date: 2009-03-23 00:52:45 UTC
From: William McKeehan (KI4HDU)
Topic: 3405 Message: 3405

There was some talk on tonight's APRS net about connecting to AJ4HV-10 (or WA4BDS-10) using ENGMTN.

In PacLink, there is a place where you can enter a script to connect to a station. Here's the script that I use that you can look to as an example.

```
C ENGMTN
** CONN
C AJ4HV-10
CONN
```

This script works in a pattern of "string to send", followed by "string to wait for". So it will send the first command, "C ENGMTN" and the wait until it sees "** CONN" before it sends the second command, "C AJ4HV-10".

This works well for me with PacLink, your mileage may vary.

3409. Fox Hunt Sponsored By the University of Tennessee Amateur Radio Club

Yahoo group: EastTNAPRS
Date: 2009-04-15 03:09:58 UTC
From: Jonathan Culver
Topic: 3409 Message: 3409

Hello Fellow Hams,

I would like to invite you a fox hunt that is being put on by the University of Tennessee Amateur Radio Club (UTARC).
This fox hunt will be on Saturday April 25th At 1pm with a quick refresher course before we release the all the hounds.

The Hunt will be limited to the UT Knoxville Main Campus and will be a Foot Hunt only!
As this is not a huge campus we are also not allowing the use of Directional Antennas as this will make the hunt a bit more challenging.

The Start of the Hunt will be at the University Centers Main Plaza (where we have launched many balloons)
Parking is at your own risk/expense if you would like advice on this you can email me personally at KI4GBV@...

The Frequencies of the Hunt will be given at the beginning of the the Hunt (as they have not been determined yet)
The Fox will operate on the 2m band and the chat will be on the 440 band.

If you have any questions or would like to come but need equipment Please feel free to email me at KI4GBV@...
Hope to see some of you there!!

73¹s

Jonathan Culver
KI4GBV
UTARC Member

3411. UTARC Fox Hunt This Saturday!!

Yahoo group: EastTNAPRS
Date: 2009-04-22 17:03:27 UTC
From: Jonathan Culver
Topic: 3411 Message: 3411

Hello Fellow Ham's,

The University of Tennessee Amateur Radio Club's Fox Hunt Is This Saturday April 25th at 1pm starting at the University Center's (UC) Plaza.

That is located in the Heart of UT's Campus on top of the Parking garage off of Stadium Dr next to the UC, whose address is:
1502 West Cumberland Ave.
Knoxville, TN 37996
The Club has launched several Balloons from this location.
To park in the Garage you must enter from Cumberland Ave.

For those who have never done this before its a lot of fun and we will have a brief training course before we release the hounds!

The Rules
Foot Hunt only (unless you have a disability)
Limited to UT Main Campus
Start at UC Plaza
will take about an hour
HT w/ rubber duck and paper clip only

The Fox Frequency will be at
144.810 tone of 100hz (if needed)

The Chat Freq Is still To be Determined and will be given out before the hunt. It will probably be on the 440 band.

I hope to see you all there On Saturday April the 25th at 1PM at the UC Plaza.

If you do not have a radio we have extras that can be loaned out for the event You must email me at KI4GBV@... or Call me at 865-607-0566 so that I can reserve you a radio for the Hunt!

Subject: Three State Three Mountain Bike Ride - May 2, 2009
From: "Shawn Stoddard" <stoddard@...>
Date: Sat, April 25, 2009 8:35 pm
To: stoddard@...

Another year has passed and the event is here this coming weekend - May 2, 2009. The ride kicks off in downtown Chattanooga at Finley Stadium (same location as years past) at 8:00 AM. Almost 2500 bikers from several countries will depart from the stadium for an exciting ride over three separate courses covering parts of Tennessee, Alabama, and Georgia. End time for the event should be late afternoon. I look forward to working with you to help monitor the event, provide support and assistance, and most of all enjoy what should be a great day.

Plans are being completed as we speak regarding some last minute route changes, band plans, and assignments. If you have any special requirements or requests please do get those to me just as soon as possible. I will be emailing out the final event information Wednesday or Thursday evening. Once you have this information you will not need to come by net control prior to the event unless requested. Remember the free food and after-event party at Finley Stadium.

Plans that have been finalized:

* Net control will be located at the start/finish line in the bell tower on the south side of the stadium (just feet away from the location for years past) and should be on the air no later than 7:00 AM that morning.
* Repeater frequencies should be 146.610 or 146.790 (east side of the route), 145.190 (west side of the route), and 442.150/444.450 (linked to 145.190).
* APRS will be used - if you have it, flaunt it. Please do send me your SSID.

If you know of any other operators you would like to participate please forward this message and have them contact me directly or come to net control the morning of the event. All are welcome!

3414. Another digi bites the dust

Yahoo group: EastTNAPRS
Date: 2009-04-27 16:01:19 UTC
From: Bruce W. Martin
Topic: 3414 Message: 3414

Yet another digi bites the dust due to change of ownership of a tower.

Several years ago AAA Towers in Athens, TN acquired quite a few of the Long Line tower sites that AT&T was decommissioning. I think part of their strategy was to recover the massive amounts of copper feed line used for these microwave sites as well as entice commercial customers to these sites. Most of the towers were self supporting and 250' or taller with commanding views. Unfortunately when they posted their list of available towers for rent, thieves took advantage of the list and started getting to the sites and stealing the copper. They were eventually caught and the tower list went offline. The company had very reasonable terms with local Amateur Radio operators to have full use of the facility for the price of keeping the property vegetation at bay. Then the owner died and the company started selling off many of these tower properties. DukeNet Communications (part of Duke Power) acquired the property and started insisting on more stringent requirements for year round monthly inspections, large amounts of liability insurance, and other onerous requirements for continued use by Amateur Radio operators.

Last year the KG4NRC-1 digi near Waynesboro, TN went off the air as DukeNet's new ownership made it impractical for Sean to continue using the site. Today I found out that I will need to take the NT4UX-4 digi near Crossville, TN off the air as the other Ham on the tower is also finding it too onerous to keep using the site. This will possibly affect some of the coverage of the I-40 corridor between Nashville and Knoxville.

The other NT4UX digis surrounding Nashville are not on any DukeNet owned property so I do not anticipate any problems with continued use of those sites.

Hi Bruce,

Commentary: Read at your Own Risk.

It is a well known fact of non-profit experience that those with the ability to help often don't help or actively stand in the way, because they don't value what's being done. It would have been no issue for Duke other than they don't value what we do and can show their power by ruining it. This may not help the cause, or be very insightful to a lot of us, and may even make some folks here upset, but isn't it a sad commentary on some people's lives that they would rather stand in the way than help, even if just in a minor way. Age, experience, desire, a sense of goodness, and curiosity all make a good life; easy to see what doesn't.

End Commentary: Start Reading Here.

I looked at this site and this iPhone application a little bit yesterday.

It looks like it is designed to allow you to upload your data after the fact, not during.

APRS is a real-time system, so as far as I can tell, there is not a good interface to go between this web site and APRS.

On the other hand, someone could write an iPhone application similar to this app which could upload your position information to the APRS-IS using the iPhone's data connection (assuming that you have cellular connectivity).

AND, I think it would be pretty easy to fetch an APRS Trail from findu.com (or similar) and format that in a manner that one could use to upload to this site. However, even as I write this I realize that if you have APRS, then you have a GPS and the track that the GPS saves would be more detailed than the APRS trail, so I don't see much value in this approach.

3419. Question about digipeater setup

Yahoo group: EastTNAPRS
Date: 2009-05-05 02:04:30 UTC
From: humorgan
Topic: 3419 Message: 3419

I would very much appreciate any suggestions or comments that would help me set W4VAB up as a Local WIDE1-1 digipeater.

I am using my AEA PK-88 as the digipeater. It appears to be working but the packets that it repeats are not making it into the system.

The beacons from the PK-88 are making it into the system so the RF path is working.

W4VAB-8 makes it into the system on its own when it is set to transmit at 5 watts, so I have it cut back to 250 mw to try to get it into the system through the PK-88.

The W4VAB digipeater hears W4VAB-8 then transmits.

Here is what W4VAB reports when it hears from W4VAB-8

W4VAB-8*>WIDE1-1>APOTC1:/050120z3555.07N/08357.31W[189/000/A=001080 19C Hiking

Any comments or suggestions about change that I should try to get this to work?

By the way I have set the alias of the digi to WIDE1-1 and have WIDE1-1 in the UNPROTO path of W4VAB-8.

Thanks,

Hugh W4VAB

I'm sorry but I don't know what W4VAB was sending. I think it is working now. It appears to have started working when I changed the path of W4VAB-8 from WIDE1-1, TN to WIDE1-1, WIDE2-1.

The next digi up the line from W4VAB that hears it reports its own call then WIDE1-1* so it must be reporting that it received the packet from myalias WIDE1-1.

Is there a reason why it works with WIDE2-1 as the second path and does not work with TN as the second path or am I misreading what I am seeing?

Hi William,
Great job! Lets not overlook that Knoxville / Morristown is also served by KC4LU-3 configured the same as K4TJY-3 & KE4OTZ-3. See ya on the net Sunday...

It looks good.

In looking at the stats, the KC4LU-3 digi currently serves Hamblen, Jefferson and Cocke counties. Additionally, it partially serves Grainger, Hancock and Greene counties. The digi bridges the gap from Johnson City to Knoxville

Thanks,
John

Which iGate does KC4LU-3 hit most of the time?

What about the Johnson City area? Anyone here have any more details on what all is setup up there?

Have a look at this page:
http://mckeehan.homeip.net/wiki/wikka.php?wakka=EastTNAPRS

you'll see the kind of information that I have for the other areas. Just the basics of which digi's are in the areas, what they respond to and what the recommended paths are for home stations and mobile stations (this may be the same as for the Knoxville area).

Thanks!

From: humorgan
Topic: 3433 Message: 3433

When the APRS group works special events such as the Race for the Cure do you have someone take an APRS rig with the runners (or motorcycles or whatever) and put up a portable digipeater to forward their packets?

Do you send any messages by APRS or other means?

What kind of equipment would I need to have to help with one of these events?

Hugh, W4VAB

Really depends on your role.

As a tracked resource you can get away with as little as a GPS, radio, and tracker (OpenTracker, TinyTrack, etc).

As a net control you need a good base radio, TNC or soundcard interface, and a laptop. Good software makes all the difference in my opinion.

Whether or not you need a portable digi really depends on the event. You need to evaluate your existing coverage. Adding another could make for a worse or better situation.

Text messaging works great assuming units are able to display the messages.

It's a toss up between KZ5ED-4 and WA4BDS. Sometimes it hits K1LNX-10.
There will be a new digi/igate going up in the Morristown area soon.
More info will be available later.

Hugh;

To get started all you need is a voice Radio that will be used to communicate with the ride Net Control.

The APRS equipment is a really good plus for keeping up with where the SAGS are.

Text Messages and temporary digipeaters are used on some of the rides.

Come & join us it will help you check out your equipment and it is a worthy cause.

3437. Re: [EastTNAPRS] Special Events

Yahoo group: EastTNAPRS
Date: 2009-05-09 19:27:22 UTC
From: William McKeehan
Topic: 3433 Message: 3437

As many folks have indicated, there is not a single answer to this question.

When I work an event, I have different configurations in which I operate depending on the situation.

- Motorcycle mobile - here I just run a Kenwood TM-D700 with a Garmin GPS V.

- Truck mobile/stationary - here I run a Kenwood TM-D700 connected to a laptop running Xastir and some GPS.

- Away from a vehicle stationary - here I run a Kenwood TH-D7 connected to a hand held GPS (Garmin eTrex Legend).

Here' a little more about how APRS has been used at some of our events in the past.

In the Knoxville Marathon, APRS was used to track the lead runner and then the last runner. It was accomplished with a motorcycle equipped with a Kenwood TM-D700 following the runners and one APRS station at the Finish line using a Kenwood TM-D700 connected to a laptop running APRS+SA and Delorme Street Atlas USA. We had plans for a couple of portable trackers to help keep track of some shuttle buses, but we had issues that made those inoperable. This event drew a lot of attention to what we could do with APRS from the served agencies. We also had a station at the point where the 1/2 marathon runners would go a separate route from the full marathon runners. The bib numbers of the Full Marathon runners who changed their mind and only run 1/2 were transmitted to the Finish line via APRS messaging. We did have a temporary digi up for this event; it was a simple setup, a Kenwood TM-D700 setup at the UTARC Shack using their existing two-meter antenna.

Another event was a bicycle ride called the Tour de Blount. It was a 25, 50 and 62 mile ride in Blount County. Here we had several more stations - everyone mobile (5 SAG vehicles) had APRS abilities (with a variety of setups: Kenwood TM-D700's, TH-D7's, TinyTrackers, Laptops, etc.) and we had a station setup at Net Control using UI-View with a KPC 3+.

The was also the Cherohala Challenge - a 115 mile ride with a climb up to 5477 feet. All of the SAG vehicles and a couple of stations at rest stops and another at Net Control had APRS capabilities. It was a route that required 3 repeaters to cover the event, so we were concerned about APRS coverage. We did a lot of pre-event route analysis/testing and used that information to determine the location for our temporary digi's. All-in-all, the APRS coverage turned out to be at least as good as the voice coverage if not better.

And finally, the Mill House Run. We had 4 total stations involved; one in lead, one in tail, one temporary digi and one display station at the Start/Finish line.

Using APRS provided great benefits to those of us mobile as well as to the event coordinators. As they say, a picture is worth a thousand words.

Hope this answers some of your questions.

From: William McKeehan
Topic: 3433 Message: 3438

I completely agree with Roy; setting up a station for an event (either mobile or stationary can be an eye-opening experience. It was at these events that I learned most of what I know about antenna's, power (DC as well as RF), and a variety of other radio related topics.

At my very first event (before I was a Ham), I operated using a scanner and a laptop with a soundcard interface. I was only able to hear/track one station, KE4FGW-9, the entire day, but having the laptop there with the map was in itself very helpful.

If you listen to the voice traffic during public service events such as these where APRS is not used, you will hear much of the traffic being about finding people; APRS eliminates much of that.

From: Bob Thomas
Topic: 3426 Message: 3440

William,
APRS digi, KS4NG-7 is still down. It will be back online on Jewel Mtn.,
near Erwin, Unicoi County probably in June. Counties served are Unicoi,
Greene, Washington, Sullivan, and others, as well as several in NC...
Yancey, Mitchell, and Madison. Also, I think Danny Herman, k4dht, has one up
near Mountain City in Johnson County. Thanks for asking.

Bob, Thomas, ks4ng

William;

N4NEQ-3 provides some coverage in my area and my station is one of the
I-Gates that covers N4NEQ-3.
You will find that N4NEQ-3 is at the top of this list.

http://www.db0anf.de/app/aprs/stations/digiusers-WA4BDS?sort=frames-d

The TN Counties helped are part of Blount, Monroe & Loudon.
N4NEQ-3 is most helpful on the Cherohala Challenge.

3443. iPhone APRS application - iBCNU - First Impressions

Yahoo group: EastTNAPRS
Date: 2009-05-19 14:44:40 UTC
From: William McKeehan (KI4HDU)
Topic: 3443 Message: 3443

Have a look at the track that you see from KI4HDU-6 for this morning. I left home around 7:30 AM and arrived at work about an hour later.

KI4HDU-6 is my iPhone running the iBCNU APRS application set to beacon (via the APRS-IS) once every 2 minutes.

NOTE: My iPhone is the first generation and DOES NOT have a GPS chip in it, so all of my position information was gained via the cellular triangulation method.

I don't know about you guys, but I'm pretty impressed.

I just checked my Ui-View32 log file and the track looked pretty good.

How do we use it on an event? All the packets are TCPIP.
How about battery life?

Great questions. And I'll add another to the list.

What happens when you are not in range of a cellular tower when it's time to send a beacon? Do the beacons get queued up then pushed once a connection can be made or dropped (in my case, without a cell signal, the location would be unknown)?

At an event...if there's an IGate close to the event, set it to gate the packets from that particular station to RF. That's one option, not my favorite, but it's the only way that I know of to get it onto RF.

The impact on Battery Life is a great question. I have no idea yet. I had the phone connected to a charger in the car and was listening to some Podcasts off of it at the same time...certainly more testing is in order.

3447. UI-View32

Yahoo group: EastTNAPRS
Date: 2009-05-23 16:13:28 UTC
From: humorgan
Topic: 1653 Message: 3447

I've tried to download and use the Terraserver maps with UI-View32 and get what is essentially a blank map. No terrain, no airphoto. The stations that are logged in do show up.

After some effort it appears to me that Terraserver doesn't have airphotos or maps for the area just East of Knoxville and that causes a blank map to download.

Have any of you had the same experience?

3448. Re: [EastTNAPRS] Re: iPhone APRS application - iBCNU - First Impressions

Yahoo group: EastTNAPRS

Topic: 3443 Message: 3448

It has no impact on my phone bill; with the iPhone, I have an unlimited data account, so it's just some data.

Today's run with KI4HDU-6 should be more interesting...compare it to KI4HDU-7. I had them both running most of the day while I was doing some errands.

Batter life is another matter. One day this past week, I turned on the app around 7:30 and left it on all day. At 5 PM, the battery was virtually dead and had to be recharged. I'm not sure how this would change if I had the iPhone with the gps chip in it.

So...like many other things, it's a tool that has it's uses...

3451. TN, TN

Yahoo group: EastTNAPRS
Date: 2009-06-01 13:52:53 UTC
From: William McKeehan (KI4HDU)
Topic: 3451 Message: 3451

Many of you may have noticed that some of the mobile stations in the area have changed from the nation wide recommended path of WIDE1-1,WIDE2-1 to a path of TN,TN.

A change made to the new WIDEn-N digipeaters in the area early in May added TN to work for all of the local digi's (including WA4KJH-7). The new digi's that support TN include GRNTOP-3, KE4OTZ-3 and KC4LU-3.

The benefit of using this path is that you can take advantage of WA4KJH-7's additional coverage without abandoning the coverage of the new digi's.

There two down-sides to this is approach. First, this only works in the area around Knoxville. Second, if you use more than two TN's (TN,TN), then duplicate packets are generated which results in a less efficient use of the frequency.

So who should use this path? Mobile stations that stay in the Knoxville area or stations working an event where WA4KJH-7 may provide additional coverage.

If you travel outside of the Knoxville area, the nation wide recommended path of WIDE1-1,WIDE2-1 is still recommended.

From: tennesseestargazer
Topic: 3452 Message: 3452

I noticed today an aircraft flying through our area using APRS on Ui-view. I looked up the N number of the plane and found who the owner was. I looked up his name on QRZ for a ham callsign. I don't find on that matches the info on the plane. If the pilot is not a ham, he shouldn't be using the system, right?

I don't have a problem with seeing him use it and it could be usefull if he went down (Like the Airbus 330 missing in the Atlantic). Just wondering about if it was legal.

3453. RE: [EastTNAPRS] Who is allowed to use APRS?

Have you figured out whether or not the registered owner of the plane was actually at the controls? Of if the person using ham frequencies may have been a passenger who was legally licensed? People in airplanes besides the pilot might use ham radios, so long as the Pilot-In-Command approves it.

Date: 2009-06-15 19:25:59 UTC
From: Mark
Topic: 3207 Message: 3457

Good afternoon to everyone in the group and allow me to introduce myself. The call is W2OBX, name is Mark and I am new to the APRS side of Ham Radio. I have been a Ham for roughly 13 years and have enjoyed the wide variety of communications our hobby has to offer. I am currently the Assistant Emergency Coordinator (AEC) for Jefferson County ARES and the AEC for District 6 Sky Warn for just a few of the emergency radio activities I participate in and enjoy ..

The APRS part of Ham Radio is luring and I find it very fascinating, but I am in the learning process and look forward to the opportunity to participate in nets and other communications through APRS.

If anyone has any pointers please feel free to direct them my way. Oh yeah at the current time all the equipment I have to run APRS is a TM-D710a and my home computer.

From: William McKeehan
Topic: 3458 Message: 3458
Attachments: 1 described; binary payloads are missing from this source WARC

I contacted the owner of the EGLNST digi to inquire about it's status since it's been off of the air for a while.

He told me that it went off the air a few months ago, and it took him a while to get up there and get a look at it. Once there, he discovered that the TNC had quit working, and he took it off of the mountain for repair.

He has the TNC fixed now and hopes to have it back up on the mountain and back in operation in a few weeks.

Hello Mark,
Welcome to the group. It sounds like you're off to a good start with
APRS. My first thought is to have you visit
www.TAPR.org<http://www.tapr.org/>, then Buck Rogers, K4ABT' s
website,
www.packetradio.com. TAPR's site has all the downloads you could ever wish
for. Likewise with Buck's site, but he has a lot of stuff like interface
cables, wiring digrahms, etc. As for me, I'm an old school packeteer and
still use tnc's to interface my radio and computers. I need to learn how to
use some of the newer software as well. good luck.

3461. Why a Mobile Digi is a bad idea

Yahoo group: EastTNAPRS
Date: 2009-06-16 12:56:44 UTC
From: William McKeehan (KI4HDU)
Topic: 3461 Message: 3461

On the net Sunday night, someone asked about a mobile digi. They wondered if it was a good thing or a bad thing. I know we've looked at this in the past and determined that it was generally a bad thing, but at the time I could not come up with any good reasons as to why.

So yesterday, I turned to the TAPR.org APRS Sig to see if someone there could give me a good answer. I received a great answer from Stephen H. Smith, WA8LMF, and thought it would be good to share it here.

William McKeehan wrote:
> Why would it be a bad idea for the D700's to run around
> with WIDE1-1 enabled all of the time?

1) You wind up with an unstable, constantly-changing network
as mobiles move around:

o Either the fixed digipeaters cover an area adequately,
in which case extra mobile digis are irrelevant and just
add channel congestion .
--or--
o The fixed infrastructure does have coverage holes, but
users can never count on fill-in coverage at given
locations since mobiles are constantly moving around.

2) You get massive numbers of unnecessary additional digipeats
most of the time, resulting in a massive increase in channel loading. Imagine the QRM mess and amount of air time consumed if 5 or 10 mobiles a few miles apart in the afternoon rush hour all try to digipeat each other's packets constantly. Then consider the hundreds of duplicate packets hitting the local WIDEs from all those mobile digipeats added to the home fill-in digipeats.

3) For everyday use, mobiles make terrible digis since they:

o Are lower to the ground than even home WIDE1-1 fill-in digis,
and lack useful antenna height.
o Are usually moving. The data bit-error rate (which causes
RX and TX failures) due to mobile flutter goes up rapidly as
the speed increases.

BOTTOM LINE: Unless a mobile is PARKED and STATIONARY on high ground
(hill top, top of a parking ramp, etc), they are adding to the problem
(by creating channel congestion, and possibly adding to the number of
defective packets) rather than helping.

Welcome to APRS Mark!

I'd love it if all ARES teams were APRS equipped. As Bob, WB4APR, the creator of APRS says on his web site (www.aprs.org):

APRS is not a vehicle tracking system. It is a two-way tactical real-time digital communications system between all assets in a network sharing information about everything going on in the local area. On ham radio, this means if something is happening now, or there is information that could be valuable to you, then it should show up on your APRS radio in your mobile.

I think that APRS can do a lot for situational awareness; people say a picture is worth a thousand words and APRS can provide that picture.

Feel free to jump in and ask questions here; explore the links and files sections and the message archive for some great information.

Welcome to the group!

Well, I can hear other stations by connecting to a J-pole on site, but 2 watts on an HT does not reach any digi.

3467. UPDATE Re: TN, TN; only one TN necessary

Yahoo group: EastTNAPRS
Date: 2009-06-23 15:22:27 UTC
From: William McKeehan (KI4HDU)
Topic: 3451 Message: 3467

In doing some looking at the packets this past Sunday, I noticed that all of the digi's in the area are heard direct by an IGate.

On a day-to-day basis, we want people around us on APRS to know what we're doing and we want to get our packets to the internet.

So for a further reduction in packets, I suggested that we try a path of simply TN. This path will work for both home and mobile stations. Depending on where you are, this will still generate a total of 4 or more packets and your packet will be seen over a large area.

I've changed my home station to use this path and have both of my mobiles setup this way. So far, I've been pleased with the coverage that I'm getting and happy to know that I'm reducing the number of my packets on the air.

Give it a try and see if it works for you - a path of TN.

William

William,
The ks4ng-7 digi is soon to be back up and running. Do you have any suggestions for me? It will be near Erwin, TN, as well as not far from (mile or less) from the North Carolina border. I'm open to suggestions, websites, etc., for setup information.

I'm working on some documentation now that will explain the suggested setup in detail; I hope to finish it this weekend.

However, my basic suggestions for now are to follow the guidelines for the new WIDEn-N paradigm with trapping for large n's. Exactly what to trap depends on which TNC/digi software you're using and it's capabilities. See:
http://aprs.org/fix14439.html
for guidance. Also, we have started adding TN to the list of callsigns in the UIDIGI list to allow a path of TN (or TN,TN) to be used and take advantage of older digi's which have not updated to the new WIDEn-N paradigm.

Which TNC/digi software will you be using?
What's the planned location and elevation of the digi?

William,
Thanks for your help. I'll check the website below. The TNC is an early
KPC 3 plus. I upgraded the firmware making it capable of handling the
widen-N(used to be Tracen-n) paradigm. I had to change the parms only once,
about four or five years ago. APRS setups changed weekly during early
development. Hopefully some of those unchanged, incapable digi bottlenecks
in the system are gone. I'd like to see our system capable of state wide
capabilities once again.

Thanks,
bob thomas, ks4ng

3471. Statewide APRS

Yahoo group: EastTNAPRS
Date: 2009-06-24 15:26:32 UTC
From: William McKeehan
Topic: 3451 Message: 3471

I believe that getting a packet from one end of TN to the other is possible. But with the number of hops required, it would not be at all reliable and attempts would actually have a negative impact (just because of the number of packets) on the areas along the way, especially those 2-3 hops out from the origin. The best chance of making this happen would be to select specific digi's and route your message via those specific digi's.

Using the internet as a backbone and the IGates is the best way to get a message long distances using APRS.

From: William McKeehan
Topic: 3451 Message: 3473

The only thing that I would question is the HAAT used for your PHG calculation. If I'm parsing the packet correctly, you have an indication that it's 2560 feet above average terrain. I suspect that this is it's actual height, not the height above average terrain.

From: Tom Keeble
Topic: 3451 Message: 3474

William,

My location calculates to 21 Meters or 68.90100 Feet Height Above Average Terrain using 36 radials (samples) or every 10 degrees at the Commission standard 16 Kilometers = 9.94240 Miles.

Here is the FCC URL for determining HAAT.

http://www.fcc.gov/mb/audio/bickel/haat_calculator.html

Here is an online math calculator for converting feet/meters/feet, etc.

http://www.math.com/students/converters/source/length.htm

From: Bob Thomas
Topic: 3451 Message: 3476

William,
You're right... HAAT is actually only about 3-5 meters for the digi,
KS4NG-7, depending which method used. It may be a while before I can change
it though. Thanks for the help. I like your homepage... especially the
tunnel video on the Blue Ridge Parkway. We had a similar experience in
the I-40 East tunnels in North Carolina. We were sandwiched between two
trucks doing 65 mph and no one warned me about the pavement grooves!

From: William McKeehan (KI4HDU)
Topic: 3479 Message: 3479

K9DCI has put together a great starter guide for APRS user. It explains what APRS is, why you may want to use it and how to do some of the basics (like sending e-mails with or without WinLink2000).

It's available on his web site here:
http://home.comcast.net/~k9dci/site/?/page/APRS_Beginner_INFO/

I'd encourage you guys to have a look at it.

William

From: tennesseestargazer
Topic: 3480 Message: 3480

I have lots of space available on my web server. I have been thinking of setting up an ftp site for APRS maps. I'm trying to decide if I should make it a site that you would have to request access and be given a username and password to access the files or make it an open site. Username and password is requires some work to add users. Making an open directory requires more work, but is more friendly to users.

The first option is also easier to allow users to upload maps they have created for special events.

Opinions?

See what exists already at www.tapr.org . I don't have the exact directory and such on hand but should not be hard to find. However you maybe able to link a LOT of things back to them. Why reinvent the wheel. However, they are bad to redo their website and your links may go bad. So stay on top of that.

73,

Rick WK4R

Subject: [EastTNAPRS] planning an APRS Maps download site.

I have lots of space available on my web server. I have been thinking of setting up an ftp site for APRS maps. I'm trying to decide if I should make it a site that you would have to request access and be given a username and password to access the files or make it an open site. Username and password is requires some work to add users. Making an open directory requires more work, but is more friendly to users.

The first option is also easier to allow users to upload maps they have created for special events.

Opinions?

Definitely don't make it too open. I once had a robot of some sort
"borrow" space for "other purposes".

I would suggest that you require registration for uploads, but allow anonymous downloads.

Setting up a secure FTP location is difficult...be sure to read up on it so that your system does not get hijacked.

3485. recommendations?

Yahoo group: EastTNAPRS
Date: 2009-07-05 16:02:41 UTC
From: tennesseestargazer
Topic: 3485 Message: 3485

I was given a 30 to 40 foot tower yesterday that has a 11 meter "superscanner" antenna on it. I need to take it down in the next couple of weeks. The antenna has 3 vertical dipoles on 4 foot booms spaced 120 degrees apart. I may recut for vhf frequencies. Anyone done this?

To take the tower down I plan on climbing it and taking the antenna off and lowering it. The tower is steel. What is the average weight of 10 foot sections. I don't know who made the tower. It's not guyed, just attached to the house about 12 feet up. Should I get a gin pole and take off the top section and lower it first?

I had a similar antenna back in the late 70's. It could be made into a 10 Mtr antenna real easy. Don't know about cutting to 2 mtrs. And I would use a Gin Pole to disassemble the whole tower.

This was discussed on the APRS net tonight, so I thought I'd share the link with everyone in the group.

http://tgimboej.org/

"The Great Internet Migratory Box Of Electronics Junk is a progressive lending library of electronic components. An internet meme in physical form halfway between P2P zip-archive sharing and a flea market. It arrives full of wonderful (and possibly useless) components, but you will surely find some treasures to keep. You will be inspired look through your own piles, such as they are, and find more mysterious components that clearly need to be donated to the box before it is passed on again."

From: tennesseestargazer
Topic: 3490 Message: 3490

I am working on creating an APRS map site for members to be able to download/upload maps. If you are interested in providing maps for the site, please email me at kg4ujc@... with your request for access to the FTP site. Please email me your call sign and an 8 character password you would like to use. I will then reply when your access is granted. NO SPAM PLEASE... or I will close the site. When you upload files, please zip them together and include a text file in the zip describing the maps. As soon as I have a collection of map files I will transfer them to a public page on my web site to make them available for public download. I will list the maps on the site by who provided them and also by area covered.

3499. Sending e-mail with WinLink and APRS

Yahoo group: EastTNAPRS
Date: 2009-07-20 12:57:24 UTC
From: William McKeehan
Topic: 3499 Message: 3499

A few weeks ago on the net, someone asked about using APRS with WinLink. Since then, the WinLink.org website has been down for some maintenance and I could not find this page to give you all of the how-to information.

This page:
http://www.winlink.org/aprslink

Has all of the details on how it works. In a nutshell, once you have a WinLink address established, then you can send an e-mail message from APRS by sending three APRS message to WLNK-1
First:
SP <to> <subject>
such as
SP KI4HDU@... Test Message
You will receive a response from WLNK-1 telling you to proceed with the message.

Second, send the message, example:
Here is my test message body.

And when you're finished, send the closing line:
/EX

That's it. The web page has a lot more detail on what you can do with this interface.

Let me know if you have any questions!

3501. Possible workshop/cookout idea

Yahoo group: EastTNAPRS
Date: 2009-07-27 16:21:41 UTC
From: tennesseestargazer
Topic: 3501 Message: 3501

I brought this up last night on the net. I think it would be a good idea. Meet everyone in person that's on the net and share some knowledge. Some people learn better by hands on experience. What is everyones opinion? I'm researching locations, their costs and facilities available. I definately want a site with a shelter, so unless it's a blowing rain we could still have it. Some info I need from the group is how many would be interested in coming to such an event, location ideas, and food. Most sites do charge a fee for a pavilion rental.

Would you want to bring your own food and drinks and pay a small fee to cover the site fees?

Would you want to pay X amount (depending on how many are coming) to cover the site and burgers/hot dogs, buns and drinks and everyone bring a covered dish/desert?

Suggestions?

Email me at kg4ujc@...

I would be interested and a small fee would be acceptable for food and facility. Tyson Park might be available or Fort Dickerson either has parking and are City owned so price should be reasonable. As an "old Batchelor" I would rather pay for food than try to cook :)

3506. WB4GBI Repeaters

Yahoo group: EastTNAPRS
Date: 2009-08-05 13:38:47 UTC
From: William McKeehan (KI4HDU)
Topic: 3506 Message: 3506

Since we use one of Tim's repeaters for the APRS net, I thought I'd share this with the group. This is an excerpt from a post on WB4GBI's blog (http://wb4gbi.blogspot.com/2009/07/antenna-update.html).

"I need to pass along a request to those of you who read the blog, and hopefully it will get out to others as well. I am very aware that someone has been interfering with one or more of my repeaters. It tends to happen when people are on the air and enjoying a normal QSO. I want to ask those of you who may be involved in a QSO when this deliberate QRM'ing starts to do a couple of things:

1) DO NOT MENTION IT ON THE AIR. DON'T acknowledge that the person is causing interference. If you can still hear the person whom you are in QSO with, then PLEASE carry on the conversation as though nothing is happening. I know that it is likely that you will not be able to hear the person you are chatting with, depending on how successful the jammer is in his efforts. In that case, either sign off, or move to another repeater and make it one that you may have previously agreed to because if you mention which machine you plan on switching to, the jammers will simply follow you.

2) LISTEN ON THE REPEATER INPUT to see if you hear the interfering signal at your location. Let me or someone else know if you do hear the signal and how strong it is at your location. If you have the means to determine which direction it is coming from, that would be especially helpful.

Once we determine where the offending signal is coming from, I can ASSURE you that the offending person or persons will be prosecuted to the fullest extent of the law. If they are a licensed amateur, they will be banned from ALL of my repeaters. And yes, that is enforceable. However, in the meantime, the more we acknowledge them, directly or indirectly, the more we feed their "jollies," and they will continue to cause interference. I know its hard not to do so, but PLEASE do not engage them in any way. If you have to, sign off, or move to another frequency. It's better to do this than to engage in a "whizzing contest" with them on the air.

I'm sorry to have to devote a blog entry to this, but the problem is growing, and it is only going to get worse if we don't stop letting these people know that they are getting to us."

Thanks!
William

3510. Fw: APRS, UI-View32, and WXSVR

Yahoo group: EastTNAPRS
Date: 2009-08-09 14:34:11 UTC
From: William McKeehan (KI4HDU)
Topic: 3510 Message: 3510

Here's some information from NA4IT about the updates to the WXSVR. If you use UI-View, this is important.

-------- Original Message --------
Subject: APRS, UI-View32, and WXSVR
Date: Thu, 06 Aug 2009 00:31:20 -0400
From: Scott Duckworth

Good news. AE5PL has set up a new server to replace the old weather server for APRS. But, there are some things you will need to change to be able to "Finger WXSVR" again and read the text of warnings. Read the release below:

As of mid-July 2009, WXSVR that injected the NWS alerts into the APRS Internet system to make the NWS shape file feature work abruptly shut down without warning. A new server, AE5PL-WX, is now online providing this service. Shapes and symbols should appear on maps just as before.

Note that there are three kinds of weather items being sent by this server:
a.. Discrete APRS symbols (a.k.a. "icons") of floods, storms, tornados, etc.

b.. APRS area objects (hollow outlines of affected areas) sent as standard APRS "objects".

No special settings or added downloads are required to display these -- just a an APRS Internet feed that passes the feed from the weather data server. These first two types of objects will show on any APRS map covering the relevant area in UI-View, even without the UI-NWS option running.

c.. The transparent colored "shape file" overlays of warning regions that DO require the added. In UI-View, the UI-NWS option must be running for these to show on maps.
Using the right-click "finger" function to retrieve the full text of NWS bulletins in UIview will require editing the two files UIview32.INI and UINWS.INI located in the main UIview program folder.

a.. Shut down UIview.
b.. Locate the string FQDN=WxSvr.net in each file, and replace it
with FQDN=wx.aprs-is.net then save it.

c.. Restart UIview.
Give me a yell if you need help.

3512. Re: TEMPn-N

Yahoo group: EastTNAPRS
Date: 2009-08-19 23:28:45 UTC
From: William McKeehan
Topic: 3512 Message: 3512

Using TEMPn-N is a great idea that Bob came up with to take advantage of the thousands of Kenwood D700/D710's that are capable of acting as temporary/fill-in digis. In his words:

"APRS consists of over 1000 permanent digis across the USA. But there is a vast un-tapped resource of thousands of more digis that can be used in emergencies if needed. These are the D700/D710 mobiles that can act as digis. Normally we want all these mobile digis OFF to avoid added QRM on the network. But we need a way to use them if needed. The Solution is to set these radios' UITRACE parameter to TEMPn-N permanently. Because they are not WIDEn-N they normally will not digipeat anything. But anyone, at any time, needing a path out of an area without digi coverage, can attempt a TEMPn-N packet to use any nearby D700/D710 as an automatic digi."

To set this up on your D700, you need to connect it to a PC with the TNC in PACKET mode and enter a couple of commands. See Bob's TEMPn-N page (http://www.aprs.org/TEMPn-N.html) for more details.

The local digi's are setup to also support the TEMPn-N and thus you could run a path of TEMP2-2 to take advantage of a nearby mobile station as well as working if heard directly by a high-level digi. This is a great path to run for events in areas where coverage is limited - one of the other mobiles in the event may hear your packet and relay it to the high-level digi's in the area.

Give it a try, I was pleasantly surprised at how well it worked with an HT with a rubber-duck antenna on low power.

After a bit of re-thinking, a better path to use may be TEMP1-1,TN.

That would take advantage of the temporary digis (as well as the high-level digis) on the first hop, but would not have the temporary digi's pinging packets around each other.

Yes, KG4OVQ will ling the WJ9J repeater on 444.450 to this net on 146.940 on Sundays during net time. So you should be able to join in on the net on 442.150+ or 444.450+ Sundays at 8 PM.

Jim, on occasion, the 442.150 and 445.450 repeaters are linked to the repeater that this net is held on. It is not linked every week.

Is this net picked up on a repeater in the Chattanooga area? I have surfed the frequencies but I am not finding it linked anywhere. Would like to join this weekly if possible. Lots to learn...

Topic: 3538 Message: 3539

I'm still at the session.

This was not setup as a training class, but as a work session. There were four people who went from having nothing installed to having working WinLink stations. The necessary software was available along with how-to checklists...all that was required was asking.

The group that was there was at variety of levels in their setup, so some people needed no help, others needed lots of help.

As for "nothing was done" - I beg to differ. We got our stations setup, worked through some issues and began the SET (the primary reason for the gathering) during that time period.

Sorry things were not as successful for you.

I got alot accomplished today at the SET. I went from zero software installed to everything up and running today. I even got to participate in the SET with my new station on the air as well. Winlink 2000 is finially working on my laptop.

Enjoyed seeing everyone today. Thanks for coming.

Someone told me that did get a copy of the "Digital Disk" from the USB Thumb drive that was passed around at the meeting.

In the root of that folder, you should find a few text files. The "WL2K Check List.txt" contains step-by-step instructions for getting WinLink 2000 installed and running on a computer. And the software that you will need is all in that folder.

Hey Joe,

Over the last month I have forwarded you several emails keeping you up to date on this event. The day went EXACTLY as planned, and everyone who asked for help with installing and/or setting up the required software got it. I will have to take exception with your statement on nothing being done in 2 1/2 hours. When arriving at 10 till 9:00 I walked into a room full of stations in various stages of being on the air INCLUDING YOURS! The very first part of the day was dedicated to getting everyone up and running, as well as many, many times during the morning, what were you doing? There was close to a dozen of us prepared to stop the entire program to help not only you but any one that needed it, I'm sure you witnessed that many times in the *short* period of time you were there (everyone else was there almost 8 hours). This group as a whole is continually honing and sharing their skills with each other and anyone else that wants to learn. This wasn't our first Rodeo and won't be our last. Our training events are very well planned and executed, always tailored to the needs of the attendees. I'm sorry you chose not to take advantage of that. The APRS net on 149.94 Sundays @ 8pm, the BlountECS net Thursdays @ 9pm, and the BlountECS meetings on the third Tuesday of the month @ 7pm are all resources for help with all the software your took home from this workshop. Below is an email I sent you outlining the workshop - it went exactly as advertised. A lot of people went to a lot of trouble to put this together and pull it off, so please think twice next time before sending an email to over 100+ people on this group taking a jab by asking *"When is there going to be a "planned" workshop?"*

Folks,

Although we have been discussing the SET for a couple months at our meetings
and the past couple weeks on the net, I wanted to send out one last notice
about this years SET. It will be held Saturday morning October 10th,
starting at 9:00am, at the Blount County Red Cross Chapter House. Everyone
is invited.

This year we are going to run a table top exercise using a earthquake
scenario. Our plan is to set up multiple Winlink stations simulating
different organizations. From this we will generate traffic that could be
used in a scenario such as this. We will also be practicing sending the
traffic in a NTS message format over Winlink.

If you have a Winlink or APRS capable station, please bring it with you. I
currently have 7-8 different stations in my plan, but will happily add more
if needed.

At 9:00am we will get the stations set up and send several messages to make
sure everything is working, then go into the SET. Once the SET runs it's
course we will hold a critique for any lessons learned. During the day we
will use every opportunity to train in the use of any of the Digital modes
we may need to use, Winlink in particular. Please make plans to attend for
how ever long you can.

Who is "tennesseestargazer" do they have a Ham Call?
I did not see a call in the message.

We must have gone to a different meeting at the Red Cross Saturday.
The event that I attended was a well organized workshop with several APRS and Winlink stations that were setup simulating a planned Emergency Communications Event. This workshop was also used as a training session because some of the stations needed upgrades and additional software. Help was available to anyone who asked and a thumb drive containing APRS and WL2K public domain software and notes were freely passed around.

[snip]
APRS mentors.

GET OUT on 17 Oct. Contact your local ham radio clubs and find out who is supporting a JOTA scouting activity in your area next weekend. Ask if you can take your APRS laptop and demonstrate it.

APRS can be used for JOTA for making contacts all over the world. APRS has a global JOTA CQ method so that your CQ JOTA message goes not just on local RF but also to ALL other JOTA stations on the planet.

To work JOTA on APRS all you have to do is send an APRS message to CQSRVR and use the words CQ JOTA CQ JOTA at the beginning of the message. This will put you on the CQSRVR server for 24 hours and forward your message to everyone else that has done the same thing.

>From then on, you too will get every such loggon message from everyone else.

When you see one of these, then you have a callsign and then you can messsage DIRECT to that station, since APRS allows callsign-to-callsign messaging anywhere on the planet.

See www.aprs.org/cqsrvr.html

You can even do this from your APRS HT or D700/710. Show the scouts that HAM radio TEXT messaging works! You only need to enter two messages to QSO all day:

1) To: CQSRVR Msg: CQ JOTA CQ JOTA Troop XXXX in AL

2) To: CALL Msg: QSL! We are at Woodsmoke in FLorence

or whatever. Even though you only have your microphone keypad, all you have to do for each contact, is just RESEND message #2 and only change the CALL. Very easy to do from a keybad.

You resend message #1 once every 30 minutes or more (not allowed to send it globally any more often)...

Duh, scout kids KNOW HOW TO TEXT MESSAGE, and will love to see it work on Ham Radio!

From: joe
Topic: 3553 Message: 3553

This weekend my family and I are attending Starfest at Bays Mountain Park in Kingsport. I am doing a short presentation and demo of APRS. I don't know if I will have time to demonstrate the messaging part of APRS, but watch for my call, KG4UJC, in the kingsport area around mid day saturday.

Also, tonight (around 3:00 am to sunrise, wed. morning)is the orionid meteor showers. The constellation Orion will be rising in the east. Orion looks like a stick figure of a man holding a bow. Look for 3 bright stars in a straight line.

From: William
Topic: 3556 Message: 3556

I've been playing with UI-View32 again recently. One thing that I miss in it's feature set is the ability to see a station's track. If you go to aprs.fi, you'll see the kind of thing that I'm looking for, a line that ends at the stations current location with dots connecting it's previous position reports.

I know many of UI-View32's features can be enhanced by using add-ons. Does anyone know of an add-on that would provide this type of functionality?

Thanks,
William

That seems strange.

I checked with a couple of other participants in the net and they said that I did not have any static on my signal.

You should be hearing the repeater at the same level for everyone; unless you're listening to the input on 146.34 in which case I'd be surprised if you could hear me at all.

3570. Re: [EastTNAPRS] How to send messages.

Yahoo group: EastTNAPRS
Date: 2009-11-21 21:07:42 UTC
From: William McKeehan
Topic: 3560 Message: 3570

Sending a message using AGWTracker is pretty straight forward.

First, click on the "Msg" tab. Then, down near the bottom, enter the Callsign of the station to which you would like to send a message. For the path, try TN. Then you'll need to pick a Radio Port; your options there depend on how you have things setup. For me, I'm running AGWPE with a single TNC, so I only have one option there. Then enter the Text of the message and click SEND.

What kind of issues are you having?

I was not familiar with ARCSII, so I downloaded it to give it a look-see.

I could not find anything in there related to APRS; perhaps that's because I was only able to run it for a few minutes before it crashed. After the second crash, I gave up on it.

I use Ham Radio Deluxe for Rig control, MCP 2000 for memory management and Xastir or UI-View32 for APRS.

I think I have something more going on than just the path. Even if the path was the problem, the radio should still transmitte shouldnt it?? I can send position packets all day long with no problem, it will beacon every 5 min.. and the radio will transmitte. Now when I try to send a message the radio does nothing. I was using winpack for regular packet and the same thing happend to it. I was able to talk to a friend across town with it once but tried to use it again later and the radio will not transmitt. Im sure I have something simple turned off, but I just cant find it.

Hey all,

Well it seems our very own Scott KE4KKE has figured out something the UI-View group as not figured out yet.

He is the first we know of that has managed to Installing UI-View, Pmapserver7 and Precision Mapping on a Windows 7 64 bit OS machine.

He has posted it here: http://www.470arg.com/cms/node/350

It is pretty straight forward and relatively simple to do.

3582. APRS comments and questions

Yahoo group: EastTNAPRS
Date: 2009-12-07 22:10:50 UTC
From: Hugh W. Morgan
Topic: 3582 Message: 3582

Here are some APRS and packet comments and questions for the group.

I have been monitoring and sending HF APRS beacons on 30 meters and wonder if anyone else in the group has tried HF APRS.

Have any of you had any experience gating HF position reports to VHF APRS?

Have you used AWGPE to simultaneously send reports on HF and VHF rigs, or have you set up a virtual PC and installed multiple copies of AGWPE, UI-Views32 and Precision Mapping on the same computer to control multiple rigs?

What is the technical advantage of PACTOR over packet?

I notice that some of the local stations indicate that their icons are posted "(from Winlink)." What is the advantage of posting from Winlink rather than UI-Views32 or www.openaprs.com <http://www.openaprs.com/> ?

Wiilliam
I had to replyto this email,for the good of my fellow hams. Buyers beware of this web sight, Fox Delta first off if you send an email it will come back saying no such sight. I tried to order a small kit from them it was the cheapest kit they had. I got a small box back with a small IC in it no receipt no nothing the package was from Inda. Now I may be wrong and I hope I am, all I'm saying is buyer beware.

If you're looking for some interesting kits/projects, you may want to have a look at this site:

http://www.foxdelta .com/

They have some APRS related stuff as well as non-APRS things.

I do not know anything about them, just came across them this week and thought I would share with the group.

3594. geosat2 avmap gps

Yahoo group: EastTNAPRS
Date: 2010-01-03 23:29:14 UTC
From: n4ad1
Topic: 3594 Message: 3594

I am new to aprs and am still learning. I acquired a avmap geosat2 gps at the morristown hamfest Saturday. This unit uses an external gps antenna and has a 2.5mm male plug on it. It does not however have a place to connect it to my kenwood tm-d710a. After searching the internet I am unable to locate an adapter tee or y or any kind of configuration to connect this to my kenwood correctly. Does anybody have an idea of where to find such a creature if it exists. If it does not exist then anybody know where to find an accurate schematic for making my own adapter. Again I have looked on the internet as well with no luck for this as well. I'm open to any ideas or help on these one or two matters.

Thank You in advance,
Robert

This was discussed a bit on the net last night. The Geosat 5 comes with a cable that will directly connect to the Kenwood radios. It appears that the Geosat 2 may predate that capability in the AvMap units...

3596. Re: [EastTNAPRS] APRS comments and questions

Yahoo group: EastTNAPRS
Date: 2010-01-04 14:28:38 UTC
From: William McKeehan
Topic: 3582 Message: 3596

Sorry about the delay in responding Hugh, I was hoping that someone with some knowledge would answer.

See my responses to each question below.

On Mon, December 7, 2009 5:10 pm, Hugh W. Morgan wrote:
> Here are some APRS and packet comments and questions for the group.
>
> I have been monitoring and sending HF APRS beacons on 30 meters and wonder
> if anyone else in the group has tried HF APRS.

I have not tried HF APRS. Since APRS is designed for real-time tactical communications, I believe it is best suited to the local area. HF APRS may be an interesting mode to try, but for me, I'd rather use PSK for digital contacts on HF.

> Have any of you had any experience gating HF position reports to VHF APRS?

Nope.

> Have you used AWGPE to simultaneously send reports on HF and VHF rigs, or
> have you set up a virtual PC and installed multiple copies of AGWPE,
> UI-Views32 and Precision Mapping on the same computer to control multiple
> rigs?

I have not used AGWPE to control an HF radio, but I have used it to control a couple of TNC's. Most programs will allow you to select which AGWPE "port" you want to use, so it becomes really easy.

> What is the technical advantage of PACTOR over packet?

Speed. And PACTOR is designed with HF in mind, so, as I understand it, is more reliable on HF.

> I notice that some of the local stations indicate that their icons are
> posted "(from Winlink)." What is the advantage of posting from Winlink
> rather than UI-Views32 or www.openaprs.com <http://www.openaprs.com/> ?

If you are seeing things from winlink, then you're probably looking at the internet. Those objects are created by the winlink system and represent RMS Gateways, RMS Servers and CMS Servers which are typically not on the APRS frequency. It's APRS at it's finest, combining information from multiple sources into a single display.

From: Bob Thomas
Topic: 3594 Message: 3597

Maybe this can help. Buck Rogers, K4ABT's website: www.packetradio.com may be of help to you for cables, wiring helps, etc. I'm old school and haven't run anything but the DOS APRS programs with a TNC. My "tracker" is an Eagle handheld GPS and either a Kenwood TH 22AT HT or an Alinco mobile rig and a Kantronics KPC-3 tnc. Also, www.tapr.org is where it all began. They've got some good mail list groups and also have been the best place I've found for safe updated downloads.

3606. Radio Amateur Club of Knoxville

Yahoo group: EastTNAPRS
Date: 2010-01-20 16:54:54 UTC
From: William
Topic: 3606 Message: 3606

We've recently had some new folks who are members of the RACK club join in this group and begin playing with APRS and Packet.

One of those new participants is Jim Norman, N4CFB. Jim is the president of the RACK club. He has asked me to share with you his "President's Message for 2010" (see below) as well as extend an invitation to join their club.

If you are interested in membership, an application can be found on their web site: http://w4bbb.org/applic-C.pdf

They also have their Hamfest scheduled for July 12 this year; more information on that can also be found on their website:
http://www.discoveret.org/rack/HamfestFlyer2010.pdf

President's Message for 2010

Hello Fellow Amateurs,
The New Year is upon us and I hope that this writing finds you off to a good start. The purpose of this letter is to review recent projects and inform every one of the future projects in which we are involved.
This past year has seen many upgrades to our repeater system. The 6m split site was consolidated to one site. One of the main reasons for this was the logistics of maintaining two sites. With our limited resources, the split site just wasn't working. We installed a new Sinclair folded dipole antenna, linked the 6m band into our existing linked system and now we have (4) bands covered by our repeaters. The four repeaters can be linked or run as independent repeaters as best needed.
Now, let's review our latest project. We have acquired high speed internet service to our site, which will open a whole new world for us. We have installed a Davis weather station at our site. The data collection portion is located at approximately 60ft. up on our tower. It collects, temperature, outside humidity, solar radiation, and a rain gage. The anemometer and wind direction is located at approximately 85ft on our tower. The link to the weather station is www.weatherlink.com/user/rack. There is also a link on our website. This is a very helpful and entertaining tool for our members and also our site host, the Forestry Service of Tennessee.
We have plans of installing a pan, tilt, and zoom camera at the highest available point on the tower. This will have a 360 degree view and let me assure you, the view is beautiful. Downtown Knoxville, Seymour, Maryville, Clinch Mountains, Smoky Mountains, Wears Valley are just a few points that can be seen. This will also be available to the club and our site host.
The club voted to acquire a Kenwood TS-480 SAT for use at our site as a remote HF station. As of this writing, it is in testing stage and not on the air at out site. Testing should be complete soon and members will be able to access for our use.
If these new avenues work out, the possibilities are endless as to what we can do. Use your imagination and let's get some new ideas circulating for projects to do. The Board of RACK is open to all suggestions and we welcome them. Some members have voiced negative concerns of where the club is headed. Having said that, I want you to ask yourself the question; if

every club member were just like me, what kind of club would our club be?
I want every member and new member to find an area in the club that is your expertise or interest and share it with the rest of us. I encourage you to be our guest speaker at a meeting. We would love to hear your knowledge and experience, so share it with your fellow amateurs.
The Club's Hamfest in June is on schedule for yet another great event. Lou, WB3JKQ, is organizing with vendors, large and small to assure another successful and profitable undertaking RACK. We will be needing volunteers for many positions to work and make it fun for all.
Just a reminder, annual dues are being accepted at this time. Our treasurer, Ron, KJ4IAU, will be writing receipts for those who want to pay dues at our meeting. You can always mail them to our PO Box if you choose. Our membership is down from years past, so please bring a friend or fellow Ham and join in the fun of being a RACK member.
I look forward to seeing you at a future meeting.
Keep our Military troops in your prayers,
Jim Norman, N4CFB
President, Radio Amateur Club of Knoxville

> What is the technical advantage of PACTOR over packet?

Speed. And PACTOR is designed with HF in mind, so, as I understand it, is more reliable on HF.

> I notice that some of the local stations indicate that their icons are
> posted "(from Winlink)." What is the advantage of posting from Winlink
> rather than UI-Views32 or www.openaprs. com <http://www.openaprs .com/> ?

If you are seeing things from winlink, then you're probably looking at the internet. Those objects are created by the winlink system and represent RMS Gateways, RMS Servers and CMS Servers which are typically not on the APRS frequency. It's APRS at it's finest, combining information from multiple sources into a single display.

3611. Full Tracker2 OT2m APRS setup for sale $325

Yahoo group: EastTNAPRS
Date: 2010-01-25 14:05:50 UTC
From: John
Topic: 3611 Message: 3611

I have an excellent condition setup that I only ran mobile on one occasion otherwise it was used in the shack just this weekend to update the firmware on the Tracker2 and that is all. I have the following items in the package deal for $325. If sold separately the prices are a little more.

Tracker2 OT2m unit (newest firmware)
8 AA Battery holder with plug for OT2m
Radio interface cable for Icom V8000 rig
Icom V8000 2m 75watt rig
Garmin NUVI 350
GPS cable to allow "dispatch" mode for display of APRS stations and send/receive messages on the NUVI 350

For more info on this interface see www.argentdata.com to read about the many uses of this device.

This setup (while using the dispatch mode of the NUVI 350) will display other APRS stations received as waypoints on the GPS unit visible on the map. You can send and receive messages with this setup as well (no computer required except to setup the OT2m tracker2). I'll gladly show a demo if desired and will attach/upload a .pdf tutorial on the system also.

I will send pics if you want to see any and would really prefer to sell this as a total package otherwise email for individual prices. All this for only $325 plus shipping. I will ship this all together via. UPS or USPS priority mail at the actual cost to ship. I will sell locally and will take cash, but if I need to ship then I prefer paypal payment or money order. Email for any other questions or info. Thanks

From: William McKeehan
Topic: 3582 Message: 3613

I'm running some pretty simple equipment. It's a laptop computer running Xastir in a virtual machine. UI-View32 would also work and is easier to get setup and working if you are a Windows user. I'm operating on RF using a soundcard interface with AGWPE. The radio that I'm using is an Icom IC-V8 HT.

UI-View32 and AGWPE are both freely available (UI-View32 does require registration and requests a donation be made to cancer research). Links for where you can get these pieces of software can be found in the Links section of this group (http://groups.yahoo.com/group/EastTNAPRS/links/).

The group and the net are in place to facilitate getting people up and running with this stuff, so if you have any issues or questions about the setup, feel free to ask.

To my knowledge the Garmin series are the only ones that do that... they have bi-directional (for lack of a better term) communication to the unit. I had a GPSIII+ that would do this as well. HAd to be set to Garmin interface mode I think was it. I don't know about the Tom Tom's or any other brand. As I've been a Garmin guy from way back...

3617. Where are my weather warnings??? -OR- Why your UINWS/UI-View32 isn't broke and the current APRS-IS wx server is working correctly.

This is a message that appeared on the APRS-SIG last month. It explains why the weather information is limited on APRS now as compared to a year ago.

We have discussed this on the net, but I figured it was good to put this out for everyone to see.

To: "TAPR APRS Mailing List" <aprssig@...>
ui-view@yahoogroups.com

**** PLEASE READ THIS TO UNDERSTAND ONCE AND FOR ALL WHY WE DON'T SEE EVERY WX WATCH/WARN/ADVISORY IN UINWS OR UI-View ***

ATTN: Steven WA8LMF -- please add this information to your UINWS/UIView pages. tnx.

The following is an excerpt of an email between myself and the current owner/maintainer of the APRS-IS weather server that replaced the older one that put everything from the NWS into the APRS-IS system. Lines that begin with > are from me; all non-marked lines are from the wxsvr owner/maintainer.

PLEASE, read this a few times and understand what isn't put put out by the current wxsvr and why, and that a good part of what we aren't seeing is due to a procedure policy of the NWS, not the wxsvr maintainer.

++
/begin quote/

> I'm sure you are aware of all the buzz on the APRSSIG and UIVIEW lists
> about how the wxsvr isn't working. The biggest gripe from people right
> now is that they aren't seeing the winter weather warnings. I'm sure
> that the primary reason is that you aren't parsing the event code from
> the NWS stream for those. A big part of that is that the NWS lumps a

No, the reason they are not being put on APRS-IS is because they are not (according to the NWS) Immediate, Actual, Meteorological alerts. The reason the NWS does not classify them this way is because there is no immediate identification in a winter weather warning, a flood warning, a watch, a special weather statement, etc. To qualify as an immediate, actual alert, the NWS office determines that there is an immediate, identifiable threat to life or property in a specific area. This includes Severe Thunderstorm Warnings, Tornado Warnings, and Flash Flood Warnings.

> good part of the winter stuff under the same code of WSW and you were
> wishing to limit the wxsvr to warning messages only. I am asking you to
> consider adding the WSW and BZW event codes as valid for passage by
> the wxsvr in order that winter storm warning and blizzard warnings are
> passed along to the APRS-IS.

APRS-IS #1 primary purpose is to support APRS on RF. I used this statement to determine the criteria for publishing weather alerts on APRS-IS. As stated above, it has nothing to do with type of warning. The only criteria used are if the local weather office determines the alert is Immediate and Actual in nature (this is their terminology and ratings, not mine). Generic warnings such as winter weather, blizzard, etc. are wide-area events that are best disseminated via reliable sources such as weather radio, commercial radio, TV, and the Internet just as watches and special weather statements are dispensed. The reason for the Immediate and Actual criteria allowing dissemination to APRS-IS is because:

It will not congest an RF channel and all NWS alerts gated to APRS-IS are important so they should be looked at immediately as they may affect a mobile or remote operator's safety.

I know Dale (editor note: Dale was the person that maintained the old wxsvr) had a lot of heartburn over the excessive amount of information his weather server was pumping into APRS-IS and therefore onto local APRS channels. I decided to take a "learn from past experience" approach and focus on information that is vital to a field APRS operator that may not be available otherwise due to active operations in the mobile at the time.

/end quote/
++

The translation of this is that only LOCAL weather service issued warnings (FFW, TOR, SVR event codes) will be ported to the APRS-IS due to the belief that having *ALL* NWS watch/warn/advis messages was causing too much local RF traffic *AND* that general area and broad coverage events such at blizzards, winter storms, hurricanes, and floods are best received via Internet or media sources, NOAA Weather radio included. Flash Flood, Tornado, and Severe Thunderstorm Warnings are all LOCALIZED events that IMMEDIATELY affect safety of life and property. Many of the other warnings (blizzard, winter storm, flood, hurricane, etc.) are wide spread events that often have many *HOURS* of lead time to prepare for or react to them. Flash Flood, Tornado, and Severe Thunderstorm Warnings have lead times in the *minutes*, and thus warrant *immediate* dissemination by all means, including APRS.

Please note, there is nothing that precludes someone from creating these types of objects locally for their area and submitting them via RF. If you want to parse the NWS stream yourself for all information related to your locality, go right ahead. Just be mindful of the traffic you add to your local network in doing so.

I'm only the messenger, not the policy maker. Hope this sheds light on this "issue" for lots of people, and rest assured that your UINWS is working correctly *if* you have it set up according to the instructions located on this website:

http://www.wa8lmf.net/aprs/UIview_Notes.htm

Merry Christmas.

East TN APRS Group,
The KS4NG-7 APRS digi's antenna went down with the cell tower is was on February 5th. High winds took down a tree, that took out a guy wire, that allowed the high winds to blow the tower down. I've been up that tower and still find it hard to believe. I'll keep you posted. Hopefully we can get some photos from Chuck, kc4dsy, station engineer for WXIS FM

The Knoxville Marathon is just around the corner and planning the communications for this event has begun!

One thing that will be needed this year (as in the past) is a temporary digi located at the UTARC shack. I am currently signed up to provide this service, but wanted to give others the opportunity.

If you would be interested in providing a temporary digi for this event, please let me know.

Also, David, KE4FGW, is coordinating things again this year, so if you are interested in helping out, please let him know.

3631. APRS Messenger now has APRS over PSK-63

Yahoo group: EastTNAPRS
Date: 2010-03-08 14:07:25 UTC
From: William McKeehan
Topic: 3631 Message: 3631

I was playing with this over the weekend and mentioned it on the net Sunday night. Kinda neat and I think a little better than HF APRS at 300 baud.
--
William McKeehan
KI4HDU
http://mckeehan.homeip.net

---------- Original Message ----------
Subject: [aprssig] APRS Messenger now has APRS over PSK-63
From: "Chris Moulding" <chrism@...>
Date: Thu, February 18, 2010 5:20 am
To: "TAPR APRS Mailing List" <aprssig@...>

I've released the latest version of the APRS Messenger v 2.26 program.

The biggest change is that APRS over PSK-63 has been added. This has been tried before with an add-on to UI-View but that had problems sending packets with errors to the APRS-IS system. I've added a preamble, start and stop flags and a strong checksum to each packet so that each received packet is checked as correct before being sent to the internet.
The display will show all packets received even with errors so that weak signals can still be read manually. A frequency hopping routine has been added to the PSK-63 receiver to allow rapid signal acquisition over a +/- 50 Hz range. A Tune option allows the operator to send a carrier + 150 Hz in frequency to avoid interference to other APRS over PSK-63 users. The program uses the PC soundcard in a similar way to other digimode programs.

The program comes in three versions with different PSK-63 audio tone frequencies, 700, 1300 and 2100 Hz.

The second change is the addition of a receive only Igate. All HF or VHF packets received can be sent to the APRS-IS. If the connection to the APRS server is lost it automatically retries 1 minute later.

Future developments will include a GPS option for mobile HF tracking.

If you want to try APRS over PSK-63 on HF I'm running an Igate on 10.1497 MHz. Set your receiver to a dial frequency of 10.1476 MHz USB with the 2.1 kHz version. Please note that the dial frequency is the same as used for existing HF 300 bd packet APRS so it will work with existing HF APRS set-ups. In the US Lynn KJ4ERJ is also running an APRS over PSK-63 Igate on 10.1476 MHz.

The software is freeware and can be downloaded from the following webpage:

http://www.crosscountrywireless.net/aprs_messenger.htm

A Yahoo group for discussion on this and other topics:

http://uk.groups.yahoo.com/group/cross_country_wireless

See you on the waterfall!

From: n4ad1
Topic: 3634 Message: 3634

I am still learning abour aprs. I have a kenwood tmd-710a mobile. I am gettings out of state and far off packets. I have checked my settings and all seem correct. Is this normal or do I need to change something in the menu?

Thanks,
Robert

*Robert,

Menu # 609
POSITION LIMIT defaults to OFF.
Change this to the number of miles around you that you want to see.

Ron - K4TJY

3637. New to the group

Yahoo group: EastTNAPRS
Date: 2010-03-29 23:47:57 UTC
From: Chuck Rhinehart
Topic: 3637 Message: 3637

a short introduction, I live in Elizabethton / Carter Co. about 100 miles east of Knoxville. I am a retired disabled veteren of the Viet Nam era. Have had a life dream of being a ham. got my tech ticket in March 09, and General in Nov. so as you can see I am very new to the hobby. I have enjoyed every minute of it so far. Have been listening to the net for sometime now. the members on the net have made aprs so interesting I wanted to get involved. So here I am at ground zero, looking forwarded to learning from each and everyone. My name is Charles friends and family call me Chuck my call is wj4cgr. thank you all for allowing me to be a part of this group.

Charles wj4cgr

3641. New to APRS. Harrison, TN

Yahoo group: EastTNAPRS
Date: 2010-04-19 18:36:31 UTC
From: marswegen@rocketmail.com
Topic: 3641 Message: 3641

Hi. I am new to Amateur Radio and APRS. I took my test on april 9th.

I currently have a small radio shack 2 meter radio at 200mw of power, a kenwood ht 78a and a bearcat 10 channel 2 meter scanner. I also have a opentracker+ and a garmin ique 3600 with a hacked cable to get serial output to the opentracker.

I am good at soldering, splicing, interfacing, and I have some programming knowledge of microcontrollers, mostly Amtel tiny AVR family chips.

My aprs traffic is mostly local to my property for now and I am interested in setting up a personal one way igate with my scanner. I do not want to conflict with the KA4EMA igate. I can't hit the the KA4EMA-3 station unless I stand on my roof, I'm around 690 ft elevation.

I look forward to reading the messages here and getting caught up to what I should be doing.

Welcome to Ham Radio. What is your call sign?

What is your ultimate goal with the Igate? What traffic/information do you want to want to send or receive? I might be able to help.

Hi Dewayne. I'm KJ4TVK. Since I can't hit the closest digipeater, I need a way of recording the infomation live. I'll mostly be tracking info from a GPS. The igate would just receive it and show it on a map.

I downloaded ui-view tonight, but haven't gotten started with it yet.

Ok, I'd suggest setting up UIview without a radio or scanner at first. Connect to an APRS server and you will get everything that is on RF in the area. You will need to connect to a filter port and filter the APRS feed so that it doesn't swamp your computer. We can help with that if you need

I would also invite you to come to meet us on May 1 at the 3 state 3 mountain bike ride. We will be using APRS, both on RF and off the internet that day you can see our setups and maybe get some ideas. We will be at the First Tennessee Pavillion next to Findley Stadium all day

For a short quick look, if you have Google earth, go to www.aprs.fi and download the kml link on the lower right. Open with google earth and zoom in to chattanooga the sit back and watch

For 3 State 3 Mountain we'll be in the bell tower lobby at Finley Stadium, just look for the antenna tower.

Welcome to APRS. I believe we talked briefly Sunday night.

You can use your scanner and a piece of software called AGW Packet Engine to capture your APRS traffic. IGATE's are only needed to send the traffic you capture to APRS-IS for use on websites like http://aprs.fi.

Come get involved or at least visit us at one or both of the next two public service events. The dates are May 1 and May 15. We'll be there from 7:00 AM till late afternoon both days. APRS will be used heavily both days.

I noticed you participated in the track club event last weekend: runner or worker?

Dewayne,
I'll do that tonight. I'm very anxious to get it going. I am waiting on a registration number that I applied for last night.

I've got the 1st marked down to attend, so if nothing crazy comes up, I'll see you guys there.

Shawn,

You did talk to me the other day. I'm sorry I haven't email you but I left my notes in my gear bag and have been extremely crunched for time these last few days.

Thanks for your help guys.

Ok. You can set up UIV in receive mode via the APRS server (igate) without an access code. The APRS server will accept your data, but not anyone else's relayed by an "unconfirmed" ham.

Call me at 7785861. Or cell 8272619

Dewayne

Dewayne,
I'll do that tonight. I'm very anxious to get it going. I am waiting on a registration number that I applied for last night.

I've got the 1st marked down to attend, so if nothing crazy comes up, I'll see you guys there.

Shawn,

You did talk to me the other day. I'm sorry I haven't email you but I left my notes in my gear bag and have been extremely crunched for time these last few days.

Thanks for your help guys.

Shawn,

We did speak on Sunday. Thank you for your advice.

My wife ran the race, and I walked the walk with a little one.
I had that aprs message saved to my opentracker and transmitted it every 5 minutes or so, hoping some one would find me, and receive it locally, but it was a long shot. I don't know if any hams were there working the event, there was no voice traffic on any know repeaters. On top of the Chicamauga battle field big stone tower, I tried to hit a digipeater but didn't have any luck. I had to stop and laugh at myself as I stood on top of the tower, ht in one hand stretched up as high as I could reach to send a packet and my cell phone in the other hand checking the web browser to see if it had regestering on the aprs net.

I have tried to use AGWPE but could not get it to receive a valid packet (red or green light would not light), so I switched to psk something 32. Which is like agwpe but with a front end decoder. It can decode lots of different data traffic types as well an analyze the baud rate of incoming traffic. It is very cumbersome, but works wtih my laptop sound card when aprs traffic is received on the scanner.

I'll give AGWPE another try because I know it's required for ui-view.

I read somewhere that laptop and onboard sound cards are not good for this but I think that article was written in 2000 or so. They referenced a soundblaster is ideal to use, which I use to own with my 16mhz 386 in 1990 but haven't seen or heard of one for 10 years.

Do you guys use onboard sound cards with 2004 or newer PC's?

Thanks

Joe KJ4TVK

Joe

You did get into the APRS server at least 3 times on 4/18 via KA4EMA-3

Looks like you may have been in or near the Parking area at the visitor center on the north end of the Park

Dewayne, I knew this would come back to haunt me....

I didn't have a GPS hooked up, so I had the general cordinates hardcoded in for the park. I worked all night on getting a hacked serial cable to work with an old ique 3600 but couldn't get the nmea output to work with some old software that was written for the 3600. I got it working now.

The race was on Saturday morning, but I transmitted on sunday night on 4/18 during the aprs net meeting so I could look up the repeater I was using. I had the net meeting outside and wasn't in front of my computer to look up past transmissions.

We work the Battlefield Marathon in November each year there in the park. In total we work about 8-10 public service events each year for a variety of organizations.

AGWPE is a foundation item. A lot of software requires it or using it brings a lot of advantages like connection sharing. The software is a little dated and seems to be a bit picky about sound cards. It works with my personal laptop, at least for receiving. Long term plan to get a SignaLink. It is an outbound USB sound card and is recommended by several groups including the APRS crowd and the WINLINK crowd. I'll have mine at the event on 5/1 if you want to see it.

You mentioned you code for PIC's. Do anything for the desktop machines?

PICS are a little different from AVR style processors. I recently got a pic developement board, but haven't had time to dive into it. I started to play with it, but then discovered I need some other hardware for programming it, and abandoned the project. The avr's can be programmed with a couple resistors and a parralell port.

Desktops, I do very little programming. Don't laugh but I use visual basic 6.0 and a lot of cut and pasting. Most recently, I have written a program that takes a text string from a serial port, looks for certain characters, if it finds them, acks back to the serial port with another string, and then posts the text string to a mysql database on the internet.

Every website mentions agwpe, so I know I need to get it working. I'll give it a try on another laptop, I have 4 laptops to try it on, a 2000, 2002, 2005 and a 2007 model. Ofcourse, only the 05 model has a working battery. :)

3656. RE: [EastTNAPRS] Re: New to APRS. Harrison, TN

Yahoo group: EastTNAPRS
Date: 2010-04-21 13:50:33 UTC
From: William McKeehan
Topic: 3641 Message: 3656

Typically the problems that I've encountered with getting AGWPE to work properly is proper audio level adjustments. I've found that the receive needs to be much lower than you would guess. Use the diagnosis tools in AGWPE and use AGWMonitor to fine tune things.

I use AGWPE with a variety of computers, from very old desktop to an Eee PC netbook including a number of laptops (various HP and Thinkpad models).

3657. Need some vary basic "give me the big picture" help with TNC and packet email

Yahoo group: EastTNAPRS
Date: 2010-04-22 16:32:03 UTC
From: Ranger Rick
Topic: 3657 Message: 3657

OK...

I've finally got my Yeasu FT-7800 connected via the data port to a KPC-3+ which is connected to my Windows XP PC's serial port. PC seems happy to talk with the TNC. (Can call up <mycall> on the TNC) Been working thru the LOADING_WL2K_USER_PROGRAMS <../../../../LOADING_WL2K_USER_PROGRAMS/?yguid=225688514> yahoo group instructions. (It's simple to follow, but not clear on which software does what and why. [:-/])

Have loaded Winlink, Paclink, AGW, Airmail onto the PC. Have so far set up a Winlink account and used Outlook Express via Packlink using Telenet.

Now, I want to send email via the TNC/radio to the server. What do I need to do to make that happen? Assume I've got to set up an additional account somewhere to go thru a "RMS"(?). And which frequency do I use (145.05, 145-03, some other) from North Knoxville? What's the basic op procedure? [:-?]

If you would be kind enough to point me in the right direction... I'ld really appreciate it. (I do have a copy of the WinDisk files from the group if there is something in there you want to refer me to. I'm sure the answers to my "newbie" questions are in there some where... I've just not been able to run across it yet.)

Rick K4REF;

I assume that you mean that you have loaded Winpack. If you have, then bring Winpack up and monitor 145.05 and 145.03.
There ia a RMS Packet server on 145.03 (AJ4HV-10) and a RMS Packet server on 145.05 (K4RTW-10, KE4OTZ-10 and WA4BDS-10).
Each of the RMS servers have regular beacons on the frequency. Pick the strongest one and use Paclink to connect to one of
the RMS servers. Use Outlook Express to generate a E-Mail message to any E-Mail address and send it.

On the Digital Disk you will find step by step instructions on setting up and sending a E-Mail message with Paclink.

This is found in Digital Disk\WL2K\Software Setup\NEWE-Mail Assignment #4PACLINK.pdf
Digital Disk\WL2K\Software Setup\NEWE-Mail Assignment #7 PACLINK.pdf

You can send messages with Paclink , Outlook Express and the TNC connected to the radio.

You can send messages with Paclink , Outlook Express,AGWPE and the TNC connected to the radio

You can send messages with AirMail, and the TNC connected to the radio

Have you joined these groups for help & updates to the software?

This group is expanding :-)

For the EMComm groups around, APRS is proving to be a gateway to many other forms of packet communication and I have suggested that this would be a reasonable forum to discuss these expanded topics.

Roy,
thanks so much. Yes, got WinPack. (Was at work trying to remember what was on the home PC when I did the email hoping I'ld get home with to find some guidance.) Your email is exactly what I needed to know. Did not realize it was that simple. Duh!

Hope to come up to speed with Paclink (radio to server) and Airmail (radio to radio) for Emcom use. Will let you know how it goes.

I did not know about the yahoo tech group... so will look into that. Have been at the other sites.

Hopefully, I'll also be able to migrate to APRS at some point in the future. In the mean time... if I'm asking questions in the wrong place... just let me know.

thanks again and 73,
Rick

Rick;

This an OK place for Digital Mode questions. There is also some other places with more experience and more members that may have the same equipment.

Don't forget to check your WL2K E-Mail on a regular schedule. Take notes because they will be handy for the next person.

Yes, the count of snd frames will go up when you send a packet; rcv will go up with you receive (and decode - if it's not decoded, it's just noise) a packet.

It sounds to me like you have some audio adjustment levels to play with.

Right-click on the AGWPE icon in the tray and pull up to "SoundCard Tuning Aid". I like to start with the SineWave scope and adjust the volume of the radio until the incoming packets are only covering about 70% of the graph - what I typically see is that the volume is too high causing clipping and no packets get copied. You may have to adjust both the volume level on the microphone within your computers sound settings as well as lowering the volume on the attached radio.

3666. Fwd: FoxHunt This Saturday

Yahoo group: EastTNAPRS
Date: 2010-04-23 17:22:36 UTC
From: William McKeehan
Topic: 3666 Message: 3666

FYI, Fox Hunt this Saturday for anyone interested.

---------- Forwarded message ----------
From: Jonathan Culver <KI4GBV@...>
Date: Thu, Apr 22, 2010 at 10:24 AM
Subject: [UTARC Chat] FoxHunt This Saturday!
To: UTARC general chat list <chat@...>

Fellow UTARCers,

There will be a fox Hunt this weekend on Saturday April 24th at 2pm. The
Frequency's will be determined before we start the hunt on Saturday.

There is a chance for some Crummy Weather this weekend but that wont stop me.

If you would like a map of the campus you can download one by going to this link

http://www.utk.edu/maps/campus/campus-map-2006-07.pdf

This event is not limited to UTARC Members, you may brings friends with you.
If you need a radio to borrow for this event, or a friend does please Let me
know ASAP.

If the weather is really bad than we can still meet and we will go grab a bit
to eat some were as a group.

If ya have any questions please don?t hesitate to call me/ txt me/ email me.
865-607-0566 / KI4GBV@...

See you all on Saturday!

Jonathan Culver
KI4GBV
UTARC President

Tim has to turn it off quite regularly - sometimes several times a day due to QRMing etc. - as was the case during the net tonight.

I could not get it to work on 2 laptops that had the same type of sound card in it. THese two laptops were the two I was going to use for APRS, just as my luck is, but I installed it on an older 3rd laptop and before I could even test the sound card input setting in the agwpe settings, I had aprs traffic showing up on my AGWMonitor screen.

If some one asked me how complicated it was to set up agwpe before this 3rd laptop, I would say it's impossible, but on this other machine, the setup and test was quick, easy and painless.

Typically the problems that I've encountered with getting AGWPE to work
properly is proper audio level adjustments. I've found that the receive needs
to be much lower than you would guess. Use the diagnosis tools in AGWPE and
use AGWMonitor to fine tune things.

I use AGWPE with a variety of computers, from very old desktop to an Eee PC
netbook including a number of laptops (various HP and Thinkpad models).

Topic: 3641 Message: 3679

Thanks Dewayne,

It was nice meeting you last weekend.

I did check.

It's a sigmatel sound card. Doing a little research on google shows that many people have had trouble with this manufacture and agwpe. WIndows asked if it wanted to open the ports when I first installed it, and i said yes. No other firewalls used.

Joe KJ4TVK.

THese two laptops were the two I was going to use for APRS, just as my luck is, but I installed it on an older 3rd laptop and before I could even test the sound card input setting in the agwpe settings, I had aprs traffic showing up on my AGWMonitor screen.
>

Check out www.twit.tv . Several intersting podcasts available. Maxwell's house is one I've been listening to. The podcast had a story on APRS at http://www.twit.tv/mh53 .

3683. Frequencies?

Yahoo group: EastTNAPRS
Date: 2010-05-12 22:37:36 UTC
From: joe
Topic: 3683 Message: 3683

I have a radio that requires an eprom to be programmed for the frequencies. I'm going to be using it on an APRS digi, so 144.390 is a given. That leaves me with 15 more channels to program. I could program only one channel, but the other frequencies will give me ways to test output and coverage, along with emergency operations. What other frequencies are commonly used on APRS for special events?

Recommendations?

The 147.360 T100 is a repeater I use when I am camping in the area that the digi is planned to go in (Scott County). I can also hit the 147.255 (no tone?). The national simplex frequency of 146.520 is one that I will add for sure. So, thats 4 channels out of 16. So, how would you fill out the rest?

Rec. freq. Trans. Freq. Tone
1. 144.390 144.390 NONE
2. 146.520 146.520 NONE
3. 147.255 147.855 NONE
4. 147.360 147.960 100hz
5.

From: Dewayne Siddon
Topic: 3683 Message: 3684

joe,

for events using APRS we usually select voice frequencies based on local repeater availability and add a simplex frequency or two. So the frequencies really depend on the area of the event and cooperation of repeater owner/trustees and the like.

Are you asking related to a particluar event? The next one in the Chattanooga area is the Tour de Cure that starts at the Tennessee Pavilion. There are other Tour de Cure events being held on the same day.

I would consider some of the normal packet frequencies such as
145.01,03,05,07,09. There's an alternative input for APRS 144.99.

If you will have it for voice operations, then some simplex frequencies and
some standard repeater frequencies that you may use.

Subject: Speeding Ticket

Top This One For A Speeding Ticket

Two Highway Patrol Officers were conducting speeding enforcement on I-15, just north of Oceanside, San Diego, California.

One of the officers was using a hand held radar device to check speeding vehicles approaching the crest of a hill. The officers were suddenly surprised when the radar gun began reading 300 miles per hour and climbing.

The officer attempted to reset the radar gun, but it would not reset and then it suddenly turned off.

Just then a deafening roar over the treetops revealed that the radar had in fact locked on to a USMC F/A-18 Hornet which was engaged in a low flying exercise near this, its home base location.

Back at the California Highway Patrol Headquarters the Patrol Captain fired off a complaint to the US Marine Corps. Base Commander for shutting down his equipment.

The reply came back in true USMC style:

'Thank you for your letter. You may be interested to know that the tactical computer in the Hornet had detected the presence of, and subsequently locked on to, your hostile radar equipment and automatically sent a jamming signal back to it, which is why it shut down. Furthermore, an Air-to-Ground missile aboard the fully armed aircraft had also automatically locked on to your equipment location.
Fortunately, the Marine Pilot flying the Hornet recognized the situation for what it was, quickly responded to the missile system alert status and was able to override the automated defense system before the missile was launched to destroy the hostile radar position.
The pilot suggests you cover your mouths when cussing at them, since the video systems on these jets are very high tech.

Sergeant Johnson, the officer holding the radar gun, should get his dentist to check his left rear molar. It appears the filling is loose. Also, the snap is broken on his holster.'

3698. Packet frequencies

Yahoo group: EastTNAPRS
Date: 2010-07-20 22:56:28 UTC
From: aj4ph
Topic: 3698 Message: 3698

Does anyone know what some good packet frequencies are? I live in Newport. Im also looking for some digipeaters around here too.

3699. "Reaching around the world with PSK... awesome!"

Yahoo group: EastTNAPRS
Date: 2010-07-21 17:36:24 UTC
From: Ranger Rick
Topic: 3699 Message: 3699

I posted this to another Yahoo Group, but I thought you might enjoy reading about my experience. So.....

I've got to tell you how much fun I had last weekend! [:)]

Ever since I saw a PSK31 presentation at an emcomm meeting last year I've been wanting to try it out this digital mode.
I've been successfully using Winlink (email) on VHF for some time.
Now that I finally have an HF rig it was time for a look at PSK.

PSK31'sbig attraction for me is that with minimalist gear/power you can "reach around the world" or so I've been told. (Also, I'm a better typer than talker.) I had been "listening" to PSK by laying a cheap PC mic on my radio's speaker (much to my family's annoyance!) and watched the results on HRD's DM780 software for a couple weeks to kinda get a feel for what it's all about. At Field Day this year I was also able to sit in and see an operating PSK31station using Digipan.

Weekend before last my Signalink USB (sound card in a box-highly recommend it) finally arrived and I spent a short time getting it integrated into my base station/computer. (Tip definitely buy their pre-made cable for your rig.) Did not really have much time to mess with it beyond that.

Last weekend I decided that I would spent some time prepping my macros and seeing if I could get out to make a couple contacts see if anyone could "hear me" on 25watts and a wood's-bound inverted dipole. Maybe even try for an overseas contact or two.

Well, let me tell you it was awesome!! [:D] Over the weekend, I made 33 contacts and "worked the world" at least to me it felt like it! First international contact for me was Paris, France. Then Guatemala, Belgium, Germany, UK (Wales), Scotland, Spain (congrats sent on the World Cup), Mexico, Russia, Argentina, Cuba, Venezuela, Dominican Republic and Canada. Along the way I worked many stations inside the USA from the southern Keys to Michigan Virginia to Texas. Most on 20M but a few on 40M.

Bottom line.. I'm hooked bad!! [=D>] Just unbelievable to sit chatting with someone 4000 miles away, halfway around the world, with less wattage than the light bulb over my desk! I sat amazed at the idea of it. I learned a lot about my new rig (Kenwood TS-2000) and also a few more ham terms: IMD, RSQ (not RST), eQSLcc (joined), WAS and LoTW (membership pending postcard confirm).

For those of you that have not tried PSK let me encourage you to check it out. I'm no expert, but would be happy to share what I've learned if you've got any questions about it. (Not as much info on the web about PSK as I would have guessed but, can refer you to some great YouTube videos <http://www.youtube.com/watch?v=jQpBGh9RMEQ> and a couple of sites that were real helpful to me.) And there are some really smart people at EastTNAPRS that can help both of us too! [;)] See you on the waterfall! [:)]

"So much fun so little time"'

From: Roy Pollard
Topic: 3698 Message: 3702

There is some packet activity in your area on 145.050 and 145.030 Mhz.
Most of the activity is in support of Winlink 2000.

ENGMTN 145.050 is a digipeater on English Mountain
VIK 145.030 is a digipeater on Viking Mountain
W4BBB-10 is a RMS server on Chilhowee Mountain
WA4BDS-10 is a RMS server in Blount county

Monitor these frequencies for activity.

3704. Krylon Fusion paint

Yahoo group: EastTNAPRS
Date: 2010-07-26 00:59:51 UTC
From: joe
Topic: 3704 Message: 3704

I mentioned this on the net tonight. Krylon Fusion spray paint, for plastics. I repainted cases on a couple of radios today. Go to my site at www.kg4ujc.com on the amateur radio page to see a before and after pic. Just a note, on the after pic it looks like a light spot in the paint, but it was some dust I had on my fingers when I set the radio to take the picture.

larry,
definitly use a kpc-3Plus(or similar aprs friendly tnc) for the digi if you're going to set up a node for aprs. the kpc3 plus model i've used for ks4ng-7 has been running flawlessly for 12 years and works properly in the aprs network.

3709. W4ACA

Yahoo group: EastTNAPRS
Date: 2010-08-09 21:39:42 UTC
From: Hugh
Topic: 3709 Message: 3709

Let's get the W4ACA site up and running.

I have offered to purchase an Argent Data Model OT2m device for use as a digipeater at the W4ACA site. I have had good success with Argent Data devices and they have excellent reviews on www.eham.com.

The OT2m can be remotely programmed via the radio link. You can download the operating manual for the device at www.argentdata.com.

The KPC3 has some bad reviews on eham due to a problem with digipeating that they apparently had with their version 9.0 software. They have corrected the problem with a later version software.

If the group prefers the KPC3, I'm willing to contribute the cost of the OT2m which is around a hundred bucks to the project and the rest of the group can kick in the additional cost to purchase a KPC3.

Whichever device is selected, it should not be installed until a good grounding and lightning protection system is installed for every antenna support, cable, and wire that enters the building. Otherwise lightning will follow the 2 meter repeater cable, or some other wire into the building and wipe everything out again.

73, Hugh W4VAB

3711. Working on a new digi

Yahoo group: EastTNAPRS
Date: 2010-08-11 01:40:06 UTC
From: joe
Topic: 3711 Message: 3711

I hand wired a programmer to let me program the prom chip in an old GE PSX-200 2 channel Hi VHF radio. The radio is rated at 45 watts. I'm going to turn it down to about 25 watts. When my work gives me time I will get it connected to my X-digi tnc for testing. The planned location is in Scott County in the Big South Fork area. Hopefully it will be an I-gate setup. If KG4UJC-3 shows up in the next couple of weeks, it's just up for testing. I will post when it's up for real.

The GE Phoenix series radio is built like a tank. The frame is die cast metal and has a good heat sink. I'm building a fan controller to for the radio, but with the short data bursts for APRS, it really may not be needed, but it will not hurt. I have a Phoenix SX 16 channel radio I may use in place of the 2 channel model. The reason is for allowing me to access other channels if I'm on location and need other frequencies for for testing, special events or emergencies. I also plan on an APRS weather station at the same location. I'm trying to figure out how to let it share the same radio with the digi tnc.

Hugh,
Kantronics has good stuff. Over the long haul, mine have held up great. KS4NG-7(a KPC-3+) has been on the air 12 years and is still going strong. It is an early model KPC-3+. Kantronics sent me an upgrade eprom at no cost just before it wast put into service in 1998. I tweaked the beacon once I think and replaced the Alinco DR-140T rig last year after 11 years of service. Set it and forget it. I think the station engineer at the site replaced a few power supply fuses over the years. I kept it's memory and fired right up when the fuses were replaced. As long as your system can work seamlessly in the network, there shouldn't be a problem. We've had a few non standard APRS digis in the past that were a bottleneck to the whole network. Good luck with the station.
Bob, ks4ng

I hand wired a programmer to program the prom chips. I'm mounting one of the radios in a rack mount. Along with it is a tnc-x the the xdigi card. If you a kg4ujc show up in scott county, it is the xdigi. However, it is located here in knoxville. I'll only be testing for 20 to 30 minutes at a time. This will let me tweak the program before it is on site. Still looking for antenna options to use.

From: William
Topic: 272 Message: 3725

I think the APRS net has become a little stale lately, so I figured I'd poll the group and see if anyone has any ideas on what we could discuss to liven things up a bit.

Is there any aspect of APRS that you would like to hear explained or discussed? Some hardware or software that you would like to know more about? Or anything APRS related that you would like to hear discussed?

Toss the ideas my way and I'll do my best to get them added to the agenda for an upcoming net.

We have a weekly net to discuss all thing APRS. The net is 2 part - voice and APRS.

APRS is used primarily for check-ins and will be used to distribute some announcements. The main part of the net will be on the voice frequency. The voice frequency is the 146.94 repeater in the Knoxville area.

The net is an OPEN net (as opposed to a directed net). The NCS station is there basically to keep order and all things do not need to go thru NCS.

Participation by anyone that can reach the repeater is encouraged.

For starters here is some information about how I simultaneously run HF APRS, APRS Messenger, and VHF APRS all connected to UI-View32.

The equipment is,
Desktop computer with sound card
Yaesu FT-897D HF rig
Simple interface between computer and HF rig
AEA PK-88 TNC for VHF
ICOM IC-28H VHF rig

The desktop computer runs UI-VIew32, AGW Pro, and APRS Messenger software under WindowsXP.

For HF the sound card connects to the Yaesu FT-897D HF Rig.

For VHF AGW Pro connects via serial port to the AEA PK-88 TNC that is connected to my Icom IC-28H 2 meter FM Rig.

This set up will not work with the free version of AGWPE because it will not allow you to select the 1600/1800 Hz tone pair that you need to use with HF APRS in order to have 300 Hz spacing between the HF APRS tone and the APRS Messenger tone. The APRS Messenger tone must be 300 Hz higher than the HF APRS tone in order to have the spacing required to operate simultaneously the same radio frequency.

Using the 1600/1800 Hz tone pair for HF Packet and the 2100 Hz tone for APRS Messenger I can put the Yaesu FT-897D on 10.147.600 Mhz (USB) and simultaneously run both regular HF APRS and APRS Messenger.
The FT-897D allows you to offset the bandpass in Digital Mode. I set up the Digital Mode for USB and moved the bandpass up 1,000 Hz, so with the Collins 2.1 Khz mechanical filter my bandpass is 1,000Hz to 3,100 Hz above the dial frequency which puts the 1800-2100 Hz audio tones well within the bandpass.

The APRS Messenger data and Icons are passed to UI-View32 by changing the Localhost port used by UI-View32 then using Localhost as the server for APRS Messenger.

So I can see the Icons for VHF APRS, HF APRS, and APRS Messenger display on the map and can beacon and message on VHF APRS and HF APRS or APRS Messenger.

At the present time I cannot transmit through both APRS Messenger and HF Messenger for hardware reasons, but I think I know how to make that work as well. I just need to build a little circuit. In the meantime whichever of APRS Messenger or HF Messenger is activated first captures the serial port for the PTT and is the one that transmits the beacon and APRS messages on HF.

The VHF Packet would transmit beacons in sync with the HF Packet but I have set the software for a 3 second delay between keying the VHF beacon and HF beacon.

I could eliminate the PK-88 and run VHF APRS from a soundcard as well because AGW Pro allows numerous connections. It just so happens that the VHF rig was already connected to

the computer through the old PK-88 so I didn't bother to change in the setup of that rig. Actually the only change I had to make to accomplish this set up was to switch to AGE Pro from the free version of AGWPE. Everything else was already in place.

There is room for a lot of discussion about the selection of LSB or USB and what frequency do you set your radio up on. Some manufacturers have standardized on a dial setting for SSB that is the theoretical center of the suppressed carrier but other manufacturers uses a dial frequency that is the center frequency of the bandwidth for the type of signal that is actually transmitted. This is why the 60 meter channels are so confusing. The suppressed carrier frequency for channel one is 5330.5 KHz, but the center of the bandwidth is 5332 KHz.

On another subject if you want to see some interesting simultaneous HF APRS and APRS Messenger operation on 14 Mhz take a look at www.net14.org.uk . They are using HF APRS beacons for DX spotting then exchanging messages for DX credit on APRS Messenger. They take an extremely dim view of a station that gates RF to Internet or Internet to RF.

From: Jonathan Culver
Topic: 3729 Message: 3729

The UT Amateur radio club is doing an HF and 2M contest.

We are operating on WB4GBI 147.075 (+) repeater and on 20m on 14.270

Please check in if you can!

Thanks

3731. Gaps in coverage

Yahoo group: EastTNAPRS
Date: 2010-09-19 22:56:30 UTC
From: joe
Topic: 3731 Message: 3731

My youngest son drove his grandmother up thru viginia and into maryland this week. There are a lot of gaps in coverage along I-81 One gap was from newberg to almost abbington. Right now there is almost a 20 minute gap in coverage just south of blountville tn to fall branch Tn.

It was comforting to my wife (ki4bpe) to be able to track where he was. It also amazed the ladies at her work. Several asked "can you track my husband for me?)

From: joe
Topic: 3733 Message: 3733

We plan on camping near where I hope to locate the digi I'm building. I bought an antenna at the Ten-tec hamfest and tuned it. I will reprogram the digi to the location and let it run. I don't have internet access at the site, it would help if I did. I can connect a laptop to monitor traffic.

3734. APRS Messenger

Yahoo group: EastTNAPRS
Date: 2010-09-27 02:01:36 UTC
From: Hugh
Topic: 3734 Message: 3734

There is an excellent Website about implementing APRS Messenger. It was written by Stephen Smith who is an engineer in the digital radio and communications field. The link is

http://wa8lmf.net/APRS_PSK63/index.htm.

A group is experimenting with APRS on 10 and 20 meters. They do not Igate or crossband. They have excellent information on a Website at

http://www.net14.org.uk.

If you are thinking about using a sound card and AGWPE rather than a TNC you might want to look at the exhaustive Website about AGWPE created by Ralph Milnes. The link is

http://kc2rlm.info/soundcardpacket/3volset.htm.

There are a couple of programs other than AGWPE for sound cards. Some operators prefer a program called MixW.

I definitely prefer AGWPE Pro over the free version of AGWPE for several reason. It is easier to set up - you don't have to erase your config file and start over if you make a mistake. It will work with more ports. You can simultaneously use sound cards and TNCs. The decoding software is more robust. It will allow you to select the KAM tone pair (1600/1800 Hz) or the PK-232 tone pair(2110/2310 Hz) rather than be stuck with the 2100/2300 Hz pair used by the free version. The KAM tone pair works well for simultaneously running HF APRS and APRS Messenger. If you use USB select the 1600/1800 Hz KAM pair for AGWPE to use with UI-Views32, then when you set up APRS Messenger select the 2100 Hz tone for Messenger. Use 10.147 600 Mhz as your dial frequency and you will be on frequency and hopefully within the bandpass of your SSB rig. If you are on the fringe of your bandpass you need to find a way to shift your receive AND TRANSMIT bandpass up a little so signals will pass. If you use LSB the numbers are upside down and you will have to do a bit of calculating for the various tones to end up on the correct frequency. Using LSB your suppressed carrier frequency (otherwise known as the dial frequency) will be above the 30 meter band but that is no problem because you will be transmitting on frequencies that are calculated by subtracting the tone frequencies from the suppressed carrier frequency. Some of these modern transceivers will not transmit if the dial is set on a frequency that is outside the band, so you may have to use USB or modify your rig for out of band operation.

My rig has a 2.1 Khz Collins mechanical filter for transmit and receive in SSB mode, so the 2100 Hz APRS Messenger tone is at the limit of the bandpass. The issue is resolved by shifting the bandpass up a bit. I have programmed my rig to use USB and shift the bandpass up 550 Hz when Digital mode is selected This places the tones in the center of the bandpass.

I seem to set up various modes and play with them for awhile then migrate back to CW.

From: William McKeehan
Topic: 3743 Message: 3745

Those settings look reasonable to me as a starting point. They may need some adjustment once you get the digi in the field and operational. The beacon path that you are using should work just fine also.

Maybe it was just out of range of the other digi's (thus the reason that it's a location where a digi is needed) and that may change once W4ACA-3 is back on the mountain.

I'm planning to put the w4aca-3 back on its location this Sunday weather permitting! De. Kb4its

On Oct 4, 2010 7:44 AM, "William McKeehan" <yahoo-mail@...> wrote:

Those settings look reasonable to me as a starting point. They may need some adjustment once you get the digi in the field and operational. The beacon path
that you are using should work just fine also.

Maybe it was just out of range of the other digi's (thus the reason that it's
a location where a digi is needed) and that may change once W4ACA-3 is back on
the mountain.

William,

I have the UIFLOOD set to TN. Here is the info on the Xdigi site about uiflood.

****
the left hand column. The Callsign and Alias are fairly straightforward, but some of the other parameters may require explanation. The UIFlood callsign supports the WIDEn-N paradigm. When the digi receives a packet with a path of, say WIDE3-3, it will decrement the SSID value (to WIDE3-2) and retransmit the
packet. When it reaches WIDE3-0, it will replace this value with the X-Digi's callsign. UITrace works in a similar manner, but adds X-Digi's callsign to the path. So, for example, WIDE3-3 becomes URCALL, WIDE3-2 in the above example. The limits for UIFlood and UITrace are provided to allow the X-Digi to stop overly long paths. In the above case the UITrace limit is set to 3, so an incoming path of WIDE4-4, for example, would be simply be digipeated as URCALL. The UICall fields allow you to specify up to 8 calls for which X-Digi will
simply do callsign substitution.

****

Should I replace the TN with WIDE3-3? I'm sending a message to the Xdigi developer to see if "TN,WIDE3-2" is a valid command. I think the "TN" in the uiflood may be why I was not seen. The closest digi to the location was WC4YC. My laptop running agwpe and uiview saw this digi along with my xdigi.

Joe

3748. Re: [EastTNAPRS] Re: Settings on Xdigi

Yahoo group: EastTNAPRS
Date: 2010-10-05 17:46:24 UTC
From: William McKeehan
Topic: 3743 Message: 3748

You would probably learn a more about how this TNC-X digi operated if you were to hook up another radio and monitor it's behavior rather than relying on what you see on the internet; the internet does not show you a complete picture of what happens on RF.

The UIFLOOD setting specifies how received UI packets, which include n-N parameters, are processed.

So by asetting UIFLOOD to TN, you are telling the TNC to act as a digipeater for TNn-N packets; so if the TNC receives a packet with a path of TN2-2, it will digipeat the packet and decrement n-N to TN2-1.

In most other TNCs, the UIFLOOD parameter takes other parameters like ID, NOID and FIRST.

The Kenwood manual says the following:
With ID selected, deletes the relayed digipeaters and adds the MYCALL parameter.
With NOID, merely decrements N-N; ex. 4-3 to 4-2.
With FIRST, adds the MYCALL parameter only when serving as the first digipeater.

I'm pretty sure the others behave similarly.

So the UIFLOOD setting has no impact on the path used by the TNC's beacon; that is controlled in the beacon configuration menu. It looks like you will send out four identical beacons at varying times (based on WB4APR's idea that locally you should be heard more often than at a distance - good idea).
One of the four times, your TNC will use a path of WIDE1-1, another it will use WIDE2-2 and for the other two times, it will use no path at all.

I do strongly encourage you to setup a station nearby so you can test how this tnc handles various packet path constructions and verify that the beacon settings work as you expect them to be working.

I consider a local digi to be working ideally if it will digi the following:
WIDE1-1
WIDE2-2
TN
TNn-N (where N is between 1 and 7)
YOURCALL
it should ignore WIDEn-N paths where n is greater than 2 like this:
WIDE3-3

3749. UT Amateur Radio Club Fox Hunt! This Sunday!

Yahoo group: EastTNAPRS
Date: 2010-10-08 12:46:36 UTC
From: Jonathan Culver
Topic: 3749 Message: 3749
Attachments: 1 described; binary payloads are missing from this source WARC

The University of Tennessee Amateur Radio Club will be Hosting a Fox Hunt For This Coming Sunday.

The Fox Hunt will be Held at 2pm starting at the UC Plaza above the parking garage next to the University Center (located with a Blue X on the attached map).

The fox will be on a 2M freq

walking is recommended but not required.

You may use any type of Direction Finding Devices you would like.

There will be a small refresher course held before the hunt for anyone that is new or who has some rusty skills.

Please Check in With the Jonathan KI4GBV before participating in the fox hunt, via Cell 865-607-0566 or in person at the UC

The fox will NOT be:

In Dorm rooms, Anyplace that has limited access, On or near any Railroad Tracks, The Fort area, The Strip area, North of lake Ave Until 17th St., Then North of Clinch, UT Parking Services and, Soccer Complex, West of US-129 aka Alcoa HWY, East of Henley St

Attached is a Map of the Available Area for the Fox to be in.

Maps and Hand outs will be available for Pick up at the Starting Point on Sunday.

If the Fox is found quickly we will go hide it again.

Please let me know if you would like to participate and are unable to secure a Hand held Radio for this event.

See you all on Sunday at 2pm!

Jonathan Culver

KI4GBV

UTARC President

865-607-0566

3758. Yaesu VX-8R For Sale

Yahoo group: EastTNAPRS
Date: 2010-11-21 21:38:08 UTC
From: William
Topic: 3758 Message: 3758

I am going to sell my Yaesu VX-8R handheld transceiver. I wanted to offer it to anyone in this group first before I offer it to outsiders.

The radio is less than two years old and is in near new condition. Details and pictures can be found here:

http://mckeehan.homeip.net/vx8r

I would like to get $350 for the radio with the speaker mic and GPS unit.

I plan to replace this radio with a 2-meter mobile radio (like the Kenwood TM-271) and a Kantronics KPC3+, so I'm willing to consider a trade as well.

Please respond off-list if you are interested.

Thanks!
William

Those packets look like they come from the NWS Server. Details can be found here:

3771. Solor Panel Tracking Device

Yahoo group: EastTNAPRS
Date: 2011-01-10 01:57:12 UTC
From: William McKeehan (KI4HDU)
Topic: 3771 Message: 3771

This page has a clip from the Discovery Channel Show that I mentioned on tonight's net:
http://buildhomemadesolarpanels.net/solar-power-used-in-the-tv-series-the-colony

They talk briefly about the tracking system that they built for the solar panels that they found.

William,
I remember a DOS program for solar panel directing that was on an old ham callsign CD back in the 90's. it didn't point it, but it gave you an optimum angle and direction for your location. Back in the 70's I remember a solar tracker that used a simple cylinder that warmed up when heated by the sun, then moved a solar heat collector back and forth... no motors!

Years ago I designed and built a prototype tracking sensor that tracked in both altitude and azmuth for mounting a camera with a 150 feet film spool to track a bright light source. Plans were to track a space shuttle launch. It used 4 photocells (2 for alt., 2 for az.) The photocells were mounted in short tubes about 2" long. as a sensor got shaded the motors would move the mount to center on the light source by balancing the light on each sensor. My problem was the motors I had could not keep up with the speed of the object. I never tried it to track the sun, but that speed would have not been a problem. Don't know if I still have the circuit drawings anymore.

Still wished I could have filmed a shuttle launch!

maybe one of those big satellite dish movers could be a good choice for a large solar platform? the motor that moves it would be a good choice for a large array. i still have mine. i kept it so i could adapt it for a sat tracker. i wonder if any other hams thought of using one for that? also,i wonder if you could put mirrors in one and use it as a solar concentrator to make steam? now that would cook your eggs!
on another subject, when i worked the space station via aprs, i used two setups. one was a fixed 4 element, 2 meter yagi pointed to the south, the other was a very simple 1/4 ~ verticle. not bragging, but to show how easy it was to work MIR and PCSAT QRP, we did it with 30 mw and 1 watt QRP. you have to use a tracking program to know when they're coming over the horizon. of course, i used a few beacon rate adjustments...hee hee. it was so simple to work them, i never put an antenna on the big dish. that dish mover would be a neat toy to work with and i'm sure you could easily adapt it as it takes a stepped pulse input. anyone else here do any satellite or space station work with aprs? google " ks4ng qrp " . there are still a few dishes around. folks used to give them away to get them out of their yard. all you have to do is ask your mailman who has one in their yard and might want rid of it. i got spare parts for mine that way...then a wind storm picked up the extra dish and smashed my new truck. the insurance guy said "what, your truck got hit by a flying satellite? I've heard it all now!"...

From: Steven Allen
Topic: 3771 Message: 3776

I don't have anything to add to the solar tracker but as for mirrors and a solar concentrator, you can look up Nevada Solar One. Here's a Wikipedia link to get started and here is the Solar Electric Power Association.

I'm interested in the solar power as back up means for a Ham station at home and for emergency communications. I think a solar tracker would be a good investment for that. The longer you can obtain solar power the less time you have to rely on your storage system of batteries or gas powered generator or what ever you have. Just my .02 for thought.

3777. Question about Path

Yahoo group: EastTNAPRS
Date: 2011-01-19 15:50:56 UTC
From: Hugh
Topic: 3777 Message: 3777

Sometimes I hike in the Great Smoky Mountains National Park. The boundary between NC and TN runs right down the highest ridge lines, so sometimes part of the hike is in NC and part in TN. When on the NC side I receive signals from EGLNST in Waynesville, NC. I believe (from what I have seen on www.aprs.fi) that EGLNST responds to a path of W3,NCn-N. I currently use a path of Wide1-1,TN. I also notice that EGLNST is relayed into the APRS system by stations in Blount and Sevier Counties of TN. My question is this. If I want to improve my chances of getting into the APRS system from both sides of the mountains, should I change my path to include something like NC1-1, or NC?

Thanks,

Hugh, W4VAB

3778. OpenAPRS for iPhone 2.3.1 Released

Yahoo group: EastTNAPRS
Date: 2011-01-21 12:24:07 UTC
From: William McKeehan
Topic: 3778 Message: 3778

This will probably make OpenAPRS my favorite APRS client for the iPhone...I'm downloading it now and should have a report by net time Sunday night.

---------- Original Message ----------
Subject: [aprssig] OpenAPRS for iPhone 2.3.1 Released
From: "Gregory A. Carter" <gcarter@...>
Date: Fri, January 21, 2011 12:04 am
To: "TAPR APRS Mailing List" <aprssig@...>

Hi All,

I just thought I would drop a note about the new version of OpenAPRS for iPhone (2.3.1) that is now available in the Apple App Store. This new version contains the following feature enhancements that may be of interest:

- Added push notification support; once registered for push notifications with the SSID of your choice any messages received via APRS-IS (either igated from RF or direct) will be displayed as an alert regardless of whether the OpenAPRS app is open or not. This should be a marked improvement of APRS use on iPhone and will continue to help support the global APRS messaging initiative. Never miss a message because the app is not currently running.

- OpenAPRS for iPhone now supports iOS 4 background support and can beacon position reports on an interval while the app is in the background (i.e. you can have other apps open and still beacon on a trip). Play your favorite tunes, your favorite game or just have the device in your pocket and OpenAPRS will continue to beacon your position until instructed to stop by bringing it to the foreground and turning off automatic beaconing. This new functionality while on a minimum interval timer will only beacon on significant position changes and only after the interval between beacons has been reached (e.g. 2 minutes). This helps keep the battery draw on the device lower, however there will be a greater draw with background beaconing enabled overall.

- APRS messages are now automatically stored locally in the app when downloaded instead of having to be downloaded every time. This allows you to review your APRS messages even if you don't have an Internet connection.

- All packets originating from the OpenAPRS system have the destination target set to: APOA00

The minimum requirement is running iOS 4.2 or higher on the device so to get the update or purchase the app you must be running iOS 4.2+. An iPad version will be released very shortly with the same new features.

As always I'd be happy to hear any comments or suggestions either on list or off.

Greg

3779. Re: [EastTNAPRS] Question about Path

Yahoo group: EastTNAPRS
Date: 2011-01-22 02:10:46 UTC
From: William McKeehan
Topic: 3777 Message: 3779

Adding NC or NC1-1 to the end would only give you a THIRD hop in NC AFTER you've been heard by two other digis, the second of which responds to TN.

A path is used serially, the first element in the path must be used before the second and so on.

Using WIDE1-1 in the first position seems like a good thing; EGLNST and most of the digis in East TN will respond to that. What you need is something in the second position that they will also all respond to.

Based on what you see on www.aprs.fi, EGLNST will respond to WIDE2-2.
If I have this correct: http://mckeehan.homeip.net/wiki/FixEastTNAPRS
so will most of the digis in East TN.

And watching someone hike can be interesting APRS activity, I think three hops would not be objectionable, so my suggested path would be WIDE1-1,WIDE2-2.

Do you know which digis you are hitting with the path of WIDE1-1,TN that do not result in your packet getting relayed to the internet?

3785. New poll for EastTNAPRS

Yahoo group: EastTNAPRS
Date: 2011-01-31 02:12:00 UTC
From: EastTNAPRS@yahoogroups.com
Topic: 212 Message: 3785

Enter your vote today! A new poll has been created for the
EastTNAPRS group:

What do you think about the objects around Knoxville
representing the location of red light cameras?

Your choice will remain anonymous.

o I love them! Finally, some local information that travelers can use!
o I hate them! They're nothing but clutter on my map!
o Red Light Object? What Red Light Objects?
o I could take them or leave them.

To vote, please visit the following web page:
http://groups.yahoo.com/group/EastTNAPRS/surveys?id=2347775

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

These objects were discussed on the net tonight. They are being sent out by K4MCK, currently via W4ACA-3. Most people did not voice an opinion about them on the net, so I thought I would create a poll to gather input from those in the group.

So vote (anonymously) in the poll and let your opinion be known.

I am looking forward to the group's concensus opinion and reasoning. William's poll idea is great:
> So vote (anonymously) in the poll and let your opinion be known.
> http://groups.yahoo.com/group/EastTNAPRS/surveys?id=2347775

My reason for spotting them is not to promote lawlessness and unsafe driving. The streams of cars continuing on yellow/red have stopped. The cams have matured into revenue generators. Most of the tickets now are for completly safe, but technically illegal right turns (on red without a complete stop). I call it a $50 stupid tax. The chosen locations are, of course, the busiest intersections in the area. These intersections (and all of Knoxville) tend to be cluttered with visual pollution so the standard red-light-enforced signs are easily missed. The ideas is to be of service to residents and travellers.

Some tweaks so far:
I changed the symbol to a smaller dot
I combined some locations (to reduce overlap when zoomed out)
I adjusted the spacing to evenly distribute the beacons (2 min apart from :08 to :28 and :38 to :58 each hour) to avoid the :00 :30 fixed station beacons.
I added exit numbers since non-locals won't know the streets by name.

OK so the spacing thing didn't work. The software accepted all the timing inputs, then ignored them and sent all the spots in a 15 second blast - YUCK - don't you just love free software that isn't maintained regularly. Since I can't fix it immediately, it is shut off for the day.

73,
Kevin

If you are using UIView32.in the Menu line select

Setup.then

Exclude/Include Lists.then

Exclude fixed stations X Obj option.then Ok

Only Fixed and Mobiles are only shown on UIView Maps

If you want to see all locations and objects.use http://aprs.fi/?

The poll does not allow for comments, so if you have comments either post them
here or, if you'd prefer to make the comments without revealing your identity,
you can e-mail me and I will post them without sharing the name of the original sender.

Topic: 3782 Message: 3792

Guess I'll go on record and be against the red light cam objects. If you were on the net Sunday night it may have sounded as if I was in the other camp, I was simple trying to stir the pot and increase participation in the net. It is generally accepted that Bob, WB4APR as its inventor is the go to guy and policy setter for the hobby. While there are no set in stone rules, there are a lot of tried and true recommendations to follow. While there are too many reasons to list here against the objects (in my opinion), here are some snippets from the http://www.APRS.org page of WB4APR.

Ron - K4TJY*

==========

MORE MOBILE INFO:* Since 2004, the New-N Paradigm has included the distribution of local info objects from digipeaters. In 2009, this was increased to allow up to 3 such beacons from each digi to provide local-direct INFO beacons of local traveler info to mobile user radio displays as that shown to the right and below. Earlier, only the BText was available for these beacons, but now we recommend using two more of the LTEXTS in the digis, for two more important assets. Typically these are the local recommended travelers repeater and possibly OPEN EchoLink or IRLP nodes.

For facilitating communications (especially for first-responders, visitors and travelers), local APRS digipeaters typically have room for three local objects. These should be the locally recommended voice repeater, and any EchoLink or IRLP nodes that are available to the mobile users in the footprint of that digi. .

TRANSMITTING LOCAL FREQUENCY OBJECTS: The most important aspect of this system is the word *LOCAL*, that is, the packet announcing local FREQUENCY assets such as a voice repeater is seen DIRECT ONLY in no other area than the local DIRECT coverage area of the repeater itself. It violates the principle of this concept if these repeater objects are seen in areas where the repeater cannot be immediately worked DIRECT.
Done right, repeater objects are a great asset to the Traveler/Mobile APRS user with no impact on the network.
Done wrong, repeater objects are just more QRM and unwanted SPAM.
*
KEEP IT LOCAL!* The second concept is that the packet simply should only cover the same area as the useble area of the voice repeater. And the packet should be originated at an APRS digipeater so that the packet does not collide with any other packet on the air. The digipeater can hear everything on the APRS channel, and it will only originate this info packet when the channel is otherwise clear. This is why this local info can be added at no cost to the network.

OBJECTS FROM APRS CLIENTS NOT DESIRED: This Local Info Initiative is fundamentally designed around the unique features of BEACON TEXTS in local digipeaters. In contrast, *it is not generally welcome *to generate these repeater objects from typical APRS home user stations. These client originated repeater objects are generally * not welcome* for several reasons:
Home generated objects are not on a reliable 10 minute rate for local info or are too infrequent to be of any value
Home generated objects are often transmitted multiple hops instead of DIRECT ONLY and add QRM everywhere
Home generated objects on the uplink have a high probability of collision with other users
Home generated objects also take twice the channel time for a digipeat
There is no limit to the ego or number of such home objects a local client can generate

From: joe
Topic: 3782 Message: 3793

I thought it interesting that the day after the talk on the net, today was a story about traffic light cameras. In my opinion, showing the locations of the cameras is a waste of bandwidth. If you follow traffic laws, why do you need to know where they are? Special event station objects are usefull. Net info, traffic alerts (accidents, land slides, construction and such) are usefull.

Just my opinion.

3794. Re: [EastTNAPRS] Re: Object invasion! Thank heavens they're gone now.

What about objects used during events? Those come from home stations, may have relatively long paths, but are very valuable. I send out bulletins and objects daily announcing on-the-air nets - should these be removed as well?

The one argument for not putting these red light cameras on the APRS map is that they are static. Much like places, static things are easily added to a base map which would not require sending them out over a limited RF channel.

Just some thoughts for discussion.

3795. RE: [EastTNAPRS] Re: Object invasion! Thank heavens they're gone now.

Yahoo group: EastTNAPRS
Date: 2011-02-02 17:31:32 UTC
From: scott _____
Topic: 3782 Message: 3795

Let me go on record to say i am against these as to my understanding about 'objects' they were to reflect only voice repeaters of those whom own repeaters and or digis. as my objects in the past have caused ron and a few others sleepless nights because of my 146.940 object and that object was not only a wide coverage object, but also was the weekly net object(reflected in the status) but at any given time some one was on this repeater who could render help, talk about aprs, and due to that object, allowd bob wa4prs to communicate on it during his trips through East Tennessee.Ham radio and drama go together like peanut butter and jelly. One persons good idea is another persons pedestal to stand on and complain. I have even heard people complain about local event objects. again, those of you putting(me at one time included) out objects have nice huge monitors and sit at home stationary. Those who you try to 'help' use mobile stations incapable of displaying the numerous amounts of objects put out by some of you. And lets be honest, just because you hide the call sign with another call sign to make the object appear to be from some one else, the fact is you use the system to jumble up East Tennessee's aprs band to the point that it's at times unusable.The biggest reason i stopped using pars, and to a degree, ham radio in general, is due to the stations out there who believe that ham radio is for them, and them only. What they wish to do is LAW, and no one else is allowed to do anything to stop them. I think we all remember Ron's "educational" beacon he placed over my home station with a 2 minute beacon. All this because of my LONG STANDING 146.940 object that was too close to his. Well, as mine was there first, i saw no reason to move it. so, in true HAM radio form, he "schooled" me. Good job Ron. Thanks for showing the world my long time objects were bothering you. They are gone. you win.

From: William McKeehan
Topic: 3782 Message: 3796

Looking back to the APRS Spec
(ftp://ftp.tapr.org/aprssig/aprsspec/spec/aprs101/APRS101.pdf)

I see the following about objects:

Any APRS station can manually report the position of an APRS entity (e.g.
another station or a weather phenomenon). This is intended for situations
where the entity is not capable of reporting its own position

Objects ? Any user can place an APRS Object on his own map, and
within seconds that object appears on all other station displays. This is
particularly useful for tracking assets or people that are not equipped
with trackers. Only one packet operator needs to know where things are
(e.g. by monitoring voice traffic), and as he maintains the positions and
movements of assets on his screen, all other stations running APRS will
display the same information.

So they are intended to be much more than just repeaters.

that's Good information to have handy next time there is a problem with a new object being given priority over an object which had been around for a while. as it it now, ron has seniority with his 'objects' and it would be unfair of me to assume my objects placed more signifigance over his. but alas, it would seem this isn't shared with some others of the group. Again, your own ftp pdf shows that even repeater objects cause clutter of the weary traveler who only has a few pixels of viewing screen. It was brought ot my attention years ago, that what was the reason to have a repeater object anyways? Aren't traverlers usually using omni directional antennas? there fore the exact or even close proximity of placement of repeaters seems questionable, don't you agree?

The repeater objects came about with Bob's push for local information to be available via APRS; see his web site for more details:

http://aprs.org/localinfo.html

That's also where he explains the need for these objects to originate at the digi as opposed to a home station.

I really opened up a can of worms! However, another aprs group I belong to agreed that the traffic light cam locations was a waste of bandwidth and some said could be illegal for posting law inforcement locations. Unsure about that. I could see hospitals being useful objects posted on aprs. If the traffic light cams were internet only, how were they useful? If you live here, most of you know where they are so if you were traveling through the area you would not see them. If you follow traffic laws, why do you need to know where they are?

I think this thread should be closed now.

I did not capture a screen shot showing these objects; just imaging 12 (I think that was the number) red dots on the map showing the location of red light cameras.

You can see the individual objects by using the history of APRS-IS and looking at APRS.FI. Here's one for example:

http://aprs.fi/?call=a%2FRED+FRG01

As some of you may have noticed, the KA4EMA-3 digi has not been operting at its normal location for the last few weeks. Last weekend it was returned to its normal location on Signal Mountain. This digi is being set up and is configured by myself and AC4HG for the Hamilton County ACS members.

We are trying to configure this digi with internet gateway so that it is as useful as possible. This not only includes passing positon packets into the APRS-IS system, but also to pass two-way messages between APRS users, one of which may not be local. This requires gating messages from the APRS-IS to rf. This digi is set to send these, as well as any beacons direct only with no hop. The intent is that no other digi will pick these up and re-broadcast them in order to reduce an interference possibility. To ensure that this does not happen accidently, KA4EMA-3 sends its posit packets as well as gated packets to its own call sign, KA4EMA-3.

We do expect that packets gated from KA4EMA-3 can be heard by some stations direct, but not by any stations via a digi. We need to know if KA4EMA-3 causes an unexpected increase in packet activity, to the extent that it blocks local use of your local digipeaters.

This digi has a wide reciever coverage area, pretty much from Knoxville to Atlanta, to Nashville. It is set to trap long paths to the extend that it can be done using call sign substitution. We don't wish to flood any area with packets from outside that local area, especially with those packets being digipeated repeatedly in your local area. This of course is highly dependent on the originating station using a properly configured wide1-1,wide2-1 or wide2-2 path.

We need to know how successful we are being with this. Anyfeedback that you can give will be helpful.

Thanks
Dewayne KE4IDH

William, thanks for the link. In the unproto field, we actually have
APRS,KA4EMA-3 so if I understand my fast read
this is still "standard", just with no hops.

3807. Poll results for EastTNAPRS

Yahoo group: EastTNAPRS
Date: 2011-02-08 09:21:36 UTC
From: EastTNAPRS@yahoogroups.com
Topic: 254 Message: 3807

The following EastTNAPRS poll is now closed. Here are the
final results:

POLL QUESTION: What do you think about the objects around Knoxville
representing the location of red light cameras?

Your choice will remain anonymous.
This poll will close on February 7,
so you have a little more than one week to decide.

CHOICES AND RESULTS
- I love them! Finally, some local information that travelers can use!, 2 votes, 16.67%
- I hate them! They're nothing but clutter on my map!, 6 votes, 50.00%
- Red Light Object? What Red Light Objects?, 1 votes, 8.33%
- I could take them or leave them., 3 votes, 25.00%

For more information about this group, please visit

In that case, you can save a few bytes and leave out the KA4EMA-3 - it should have the same end result and would reduce the overall length of the packet, making it easier to copy on air.

1a. Test Data Predicts Disastrous GPS Jamming by FCC-Authorized Broadcas
Posted by: "N4AOF" N4AOF@... n4aof
Sun Mar 13, 2011 8:45 am (PDT)

Anyone who uses GPS should look at a couple of articles from the March 2011
issue of GPS world magazine. If you go to the magazine
website www.gpsworld.com and do a search for LIGHTSQUARED (all one word) you
will find several articles, both from the current issue
and newer developments.

The two articles from the current issue can be found at
http://www.gpsworld.com/gnss-system/act-now-protect-gps-signal-11113
and
http://www.gpsworld.com/gnss-system/the-system-test-data-predicts-disastrous-gps-jamming-fcc-authorized-broadcaster-11144

3817. U2APRS - An APRS client for the Android OS

Yahoo group: EastTNAPRS
Date: 2011-03-21 00:21:02 UTC
From: William
Topic: 3817 Message: 3817

K4TJY shared a link to this application with me earlier in the week; since then, I've seen it on a few discussion boards and everyone has had good things to say about it.

The app is available here:
http://aobajoke.no-ip.org/~ja7ude/japanese/u2aprs10/indexe.html

From their website:

It is an APRS client application running on Google Android OS.

* It locates your position using GPS, 3G, and WiFi, and uploads it to the APRS-IS.

* It shows the APRS stations near you using the aprs.fi web (special thanks to Hessu OH7LZB).

* It sends and receives APRS messages. It reads arrived APRS messages if the Text-To-Speech function is installed in the device. Speech recognition can be used to compose a message.

It has no interface to a radio transceiver.
Please bear in mind that U2APRS is in the developing phase and provided as beta software.
Use it at your own risk. Thanks.

If you know of other Droid software, do let us know.

3824. Continue Sunday Night Net

Yahoo group: EastTNAPRS
Date: 2011-03-28 00:26:38 UTC
From: William
Topic: 3824 Message: 3824

For the last few months, with few exceptions, the Sunday night nets have been pretty quite. The average number of check-ins is down to around 8.

So I ask the questions that I have asked a few times in the past.

Is the net still valuable to you?
Should we continue to have the net?
Are there some topics that you would like to hear covered during the net?

Thanks for your feedback/input.

From: Ron Russell - K4TJY
Topic: 3824 Message: 3825

William,

People come and go on nets but one thing for sure, there are ALWAYS dozens and dozens of listeners at any given time. The net is useful, informative and a needed asset in the area. The weeks that are a little light in attendance just gets you to doing other things sooner ;-)

it is still valuable. We should still continue. At this point the biggest topic would be how to increase participation. There are a lot of new Yaesu FTM-350R mobile and VX8-DR Ht users out there who need guidance. Then here is the new Kenwood THD72A that just came out. A lot of folks are going to be in need of mentors.

3827. Display event maps in aprs.fi

Yahoo group: EastTNAPRS
Date: 2011-03-28 11:18:48 UTC
From: William
Topic: 3827 Message: 3827

I know there are several people who like using aprs.fi to see APRS data - I'm one of them myself.

This morning, I learned about a new feature of aprs.fi, KML Overlay Support:
http://blog.aprs.fi/2010/10/kml-overlay-support.html

If you have event maps in a KML format (or use a tool like GPS Utility that I use - www.gpsu.co.uk - which can convert things to the KML format), then you can display that map in aprs.fi.

Have a look here at the Knoxville Marathon map in aprs.fi:
http://aprs.fi/?kml=http%3a%2f%2fmckeehan.homeip.net%2faprs%2ftracks%2f2009-KnoxMarathonRoute.kml

You'll need to pan/zoom to the downtown Knoxville area to see the overlay.

To track me on the day of the event, you can use this:
http://aprs.fi/?call=KI4HDU-9&kml=http%3a%2f%2fmckeehan.homeip.net%2faprs%2ftracks%2f2009-KnoxMarathonRoute.kml

3830. Re: [EastTNAPRS] Digest Number 1037

Yahoo group: EastTNAPRS
Date: 2011-04-04 16:19:59 UTC
From: Alan Sieg WB5RMG
Topic: 3830 Message: 3830

Someone recently pointed this out, and I had not paid that much attention
before as I am not local to that repeater's coverage.
BUT I do receive these messages by the 'Daily-Digest' method,
and consequently don't get this reminder until after the net has happened.

Perhaps if the reminder was set to deliver on Saturday instead of Sunday,
more folks would receive the email before the net takes place.

Thanks /;^)

3836. Sunday Night Net

Yahoo group: EastTNAPRS
Date: 2011-04-25 00:42:35 UTC
From: William
Topic: 348 Message: 3836

I am suspending the Sunday Night Net.

The participation in the net has dramatically dropped and very little discussion is happening during the net.

The net has been running since 2005. I think it was a good tool that did a lot to bring awareness about APRS to East Tennessee HAMS; I'm proud to have ran it for as long as I have.

Thanks!
William

William,

I understand. You ran a great net. I learned from it over the years and so did other operators.

It served its purpose well and it helped expand the APRS footprint in East Tenn.

Will the ETNAPRS yahoo group stay active?

Thanks,

73

A sad day for digital communications in East Tennessee. You have been the go to guy, the one with the answer or the knowledge to find it, and the one who has guided the overall progress of our area's "Fix East Tennessee Project".

I am happy to see your only suspending the net, that means it will be back someday (we all hope).

Thank for the many years an 73's

For a while now (and on many occasions in the past), I have felt that the net was getting stale. I do not find value in nets where people just check-in and leave, and this net was doing little more than that.

There are other avenues to spread the word about APRS - I hope to try some of those soon.

:-)

I'll still be around and will do what I can to help people get going with APRS. In fact, I am planning to try to participate in more nets which are not APRS specific, but in which some occasional APRS content may be welcomed...more to follow as I figure out where those places will be for me.

---------- Original Message ----------
Subject: 3 State 3 Mountain Bike Challenge 2011
From: Shawn Stoddard <stoddard@...>
Date: Fri, Apr 29, 2011 at 7:28 PM

This years event is fast approaching (event date is May 7, 2011) and we need a few more volunteers. My apologies for the late notice but the past two weeks have been packed with activity for many of us - from the unexpected to the extreme weather earlier in the week. Personally, I am in the dark, without internet, the house is damaged, both cars have damage, and I have several trees still to cleanup in the yard. I expect some of you are in a similar situation. I just count my blessings that my house is livable and my family is safe.

For those unfamiliar with event last year 2500+ bikers took off on three courses - 25 miles, 65 miles, and 100 miles over three mountains (Suck, Sand, and Lookout) and three states (TN, AL, GA). Working this one will stretch your field operating skills in a good way. Start/finish is Finley Stadium but most operators can report directly to their stations and avoid the confusion, Start time is 8:00 AM with the event running normally until 4:00 PM or so.

I still need volunteers to help man rest stops, cover some hot spots on the courses, and help provide communications between key personnel. We'll be operating primarily on two-meters with some 440 backup in some areas. While a mobile is recommended HT's (with and without external antennas should work. APRS will be used as well. HSMM will be deployed as well. Can't spare the entire day - several positions can be worked in shifts or are only needed for part of the day. If you are interested in helping or have additional questions please contact me via email or phone (stoddard@... or 423-463-0246 - leave message if no answer). Please forward this message as needed.

3851. APRS Emergency Beacons

Yahoo group: EastTNAPRS
Date: 2011-09-29 14:24:00 UTC
From: Hugh
Topic: 3851 Message: 3851

Does anyone, or any organization, in the area monitor APRS for emergency beacons.

There is an add on utility for UI-VIEW32 that monitors for emergency beacons. I understand that it only works if AGWPE is used to connect the TNC to UI-Views.

Also the Kenwood TM-D710 will monitor for emergency beacons.

Has anyone in the area practiced or experimented with this?

Hugh, W4VAB

From: William McKeehan
Topic: 3851 Message: 3853

I used to run Xastir all of the time and monitored the activity heavily; Xastir will pop-up an alert if it detects an emergency beacon. The only beacons that I ever saw were false positives from KA4TAR's position comment which said "OFFICIAL EMERGENCY STATION" (if memory serves me correctly).

I've been very busy lately and have not been able to play with the radio as much as I would like to. About the only time that I'm actve now is when I travel to and from work and the occational times that I check winlink e-mail.

3855. aprs.fi needs some help

Yahoo group: EastTNAPRS
Date: 2011-11-05 17:43:11 UTC
From: William
Topic: 3855 Message: 3855

When I first saw this story:
http://www.bbc.co.uk/news/business-15523050
I wondered what impact it would have on services like aprs.fi

Google said it "will only affect 0.35% of users", so I thought that the overall number of APRS users would be pretty small and thus this may not impact aprs.fi at all.

But my assumption was wrong. A couple of days later, this post appeared on aprs.fi:
http://blog.aprs.fi/2011/11/using-aprsfi-for-sar-ares-or-other.html

If I were running aprs.fi and hit with this cost, I know I'd have to be looking to shutdown or begin charging people to use the service.

I love aprs.fi; it makes getting and visualizing the APRS data very easy. If you agree, take a moment to do a little write-up to help out.

Here's what aprs.fi asks:
Put up a blog post or write about it on your volunteer organisation's web page. Send me an email pointing to the document. Write about what you are doing, where, when, and how aprs.fi is useful in what you do. Practical examples of real events are probably most useful.

Thanks!
William

This morning at about 11 am, Larry Hensley - KB4ITS
will be on site to swap out the radio on the digi with one
with a hotter receiver. Anyone available at that that time
for reports should monitor 443.500 t100

This receiver has been weak for some time now. So everyone
should notice an immediate improvement in coverage.

This morning (Sunday) at 11am, look for Larry on 443.500 t100
and monitor the w4aca-3 digi.

Thanks

3865. 2012 Goals

Yahoo group: EastTNAPRS
Date: 2012-01-08 20:30:01 UTC
From: William
Topic: 3865 Message: 3865

In 2011, my involvement in APRS (and HAM radio in general) decreased dramatically - I just had too many other things going on.

I hope to change that in 2012.

I plan to get my APRS equipment all back up and running - thus far, I've got everything working except the D700 that I use on my Motorcycle.

I also plan to participate in more public service events this year. I think that these events really give you a chance to practice the skills that will be necessary in a real emergency, so it's a good opportunity to test your skills and equipment.

I also have an HF antenna that I picked up in Dalton in 2010 that has not been in the air...I plan to address that this year as well.

Given my other commitments, these three simple things may be more than I can handle, but they are things I'd like to get done this year.

What about you? What are your HAM radio goals for 2012?

The WSPR receiver sound like an interesting project.

That's one of the great things about Ham radio-there's so much you can do with it.

Forward as appropriate

25th Anniversary Three State Three Mountain Bike Challenge - Saturday, May 5, 2012
Start/Finish - Chattanooga's Finley Stadium

We're still in need of a few additional volunteers to make this years event a success. Come spend what looks to be an amazing day in Tennessee, Alabama, and Georgia. Positions vary from fixed locations (rest stations and start/finish) to lead/sweep vehicles helping track the progress of over 1,800 bikes from all over the world at the take on 25 miles, 62 miles, 90 miles, and 100 miles. All you need is a dependable 2M handheld (external antenna recommended) or mobile station. We'll be on 440 as well (optional). Running APRS is a strong plus! Come practice your field operating skills helping to provide event and safety communications at one of the south's largest bike rides. Not able to spend all day? Come work a shift - lots of scheduling options available!

Operating details will be provided prior to the event to stations. For more information about the routes, event hours, etc go the http://www.chattbike.com

For more information or to sign up contact:

3874. Annual Golden Packet Attempt in 3 weeks!

Yahoo group: EastTNAPRS
Date: 2012-07-01 13:05:27 UTC
From: William
Topic: 3874 Message: 3874

---------- Original Message ----------
Subject: [aprssig] Annual Golden Packet Attempt in 3 weeks!
From: "Bob Bruninga"
Date: Fri, June 29, 2012 7:44 pm

Drive or hike to the top of a USA mountain 3 Sundays from now on the 22nd of July, noon to 4 PM and join the annual Golden Packet attempt.

* See http://aprs.org/at-golden-packet.html for east coast
* or http://aprs.org/pct-golden-packet.html for west coast

We need you with your D700/D710 or D72 to drive/hike to the top of some of the highest mountains in the USA and set up as a portable APRS digipeater to see if we can link a Golden Text Packet across thousands of miles.

There is an attempt along the Appalachian Trail from Alabama to Maine and along the Pacific Crest trail from San Diego to Seattle. Another great path is along the Continental Divide Trail or the National Trail (Lewis and Clark). Good portable stations are needed on many mountain tops! See the above web pages for the planning.

IN particular we need stations in the East:

* Mt Katahdin, ME
* Sugarloaf, ME
* MT Washington, NH
* Central NH
* Mt Greylock, MA
* Sam's PT, NY
* Camelback, NJ
* Governor Dick Hill, PA
* Maryland Mountains
* Hawksbill, VA
* Apple Orchard MTN, VA
* Comers Rock, VA
* Roan MTN, NC
* Clingmans Dome,TN
* Springer Mountain, GA
* Lookout MTN, TN
* Huntsville, AL
* Atlanta, GA
* and more?

Out west we need:
* Seattle, WA
* Signal Peak, WA

* Wolf MTN, OR
* Crater Lake, OR
* Mt Eddy, CA
* St John Mtn, CA
* Arnold, CA
* Pacheco Pass, CA
* Joprdan Peak, CA
* MT Pinos, CA
* San Gorgonio, CA
* Tacate Peak, CA
* San Diego, CA
* and More

There is also a new group setting up along the North Country Trail in Michigan. APRS texting DX is the game. Trails are the excuse, Mountains make it happen across valleys!

Not just any mountain, these mountains have been carefully chosen to provide nearly 100 mile range in both directions with clear shots across valleys to the next site in the Chain.

If you can man one (with redundant backup) let us know.

Bob, Wb4APR

They have changed the date to Saturday the 21st.

Once again John (AJ4HV) will be doing the heavy lifting providing a camper to protect us from the rain, power and radio setup and the antenna mast. I will be there bringing Hugh's, (W4VAB) beam antennas and providing moral support.

If you want to come up and participate or observe, you're welcome.

Setup begins early - I think we got to the site around 9am last year. We setup, make sure we can communicate with the teams near us, and then play for a while. We have a relatively easy setup; some other peaks require a hike. The actual attempt begins at 1Pm. We try for a while, identifying where things are failing, make adjustment and try some more. Then at some point, we either succeed or give up. We generally start shutdown around 3pm.

3879. New digi settings for WNC?

Yahoo group: EastTNAPRS
Date: 2013-02-09 15:52:42 UTC
From: jamestlyles
Topic: 3879 Message: 3879

Henderson Co ARES and Blue Ridge ARC are planning to put a new wide n-n compliment digi on Bearwallow Mt, near Asheville/Hendersonville. I'm configuring a TNC-X with X-digi card for the site. I was planning on using the recommended settings from http://aprs.org/newN/X-DIGI-settings.txt. However, I noticed many of the local digis are beaconing a "tactical call", such as EGLNST or GRNTOP. Is that the accepted beacon for this area?

Also, I want to make sure that the new digi will follow any local APRS conventions, so if there is anything that deviates from the recommended settings please let me know.

Thanks,

James

Hi James,

I maintain the GRNTOP-3 digi. It was named that because of it's location
on Greentop Mountain. EGLNST is located at Eagles Nest.

It's just a simple way of knowing the digi's location if it's ID is tied to
the actual location.

From: William
Topic: 3879 Message: 3881

Using a tactical call for the digi name is a matter of personal preference of the digi owner. Sometimes it can be helpful since the tactical name can tell you something about the location without needing to see it on a map. Of course, if you use a tactical call, you need to be sure to properly ID also.

In East TN, we do deviate from the standard new N-n paradigm; basically we are more restrictive. Details are documented here: http://mckeehan.homeip.net/wiki/FixEastTNAPRS

Here's what we recommend for operating in East TN:
http://mckeehan.homeip.net/wiki/EastTNAPRS

I've not been as involved with APRS (or amateur radio in general) for the last few years, so these documentes may be a bit dated, but I believe their content is still accurate.

James,
Sounds great to hear about a new digi going up on the APRS network.

3884. Introduction

Yahoo group: EastTNAPRS
Date: 2013-02-18 16:46:36 UTC
From: MunchkinKF
Topic: 3884 Message: 3884

Greetings fellow APRS enthusiasts! I see a lot of familiar names in the list of users but I want to introduce myself and hope that I get to know you all.

My name is Keith Fronk WX4EMT (formerly KG4LEO) and I live in Athens, TN. As my callsign indicates I am an ardent weather fan by choice and Paramedic by trade.

As with most people in America I am defined by what I drive. The Storm Tahoe PPV is sometimes controversial but there is no denying that it was built with APRS at it's core. You can see how this rejected police car was transformed into a response vehicle with a storm chasing streak at my thread on Radio Reference:

http://forums.radioreference.com/pictures-your-shack-mobile-setup/223058-2011-tahoe-ppv-install.html

Hope to meet you all soon,

Keith

Keith,
That's a really neat setup. Cool is an understatement. It reminds me of a car we had at our school for school trips, etc. a few years ago. Our superintendent had purchased former THP Crown Victorias at a state auction about 15 years ago. I got to take one up to Ohio for a week, so I put a couple ham rigs in it with antennas, etc. With govt. tags, antennas, etc., it looked like an unmarked patrol car. I had a blast with all the unexpected antics of the other drivers' reaction to it. On a positive note, we had a tornado touch down in Xenia, a few miles away, and the local Skywarn group was a help us.

From: William
Topic: 3886 Message: 3886

AB0OO-11 was launched a couple of days ago and it looks like it landed near the NC/SC border not too far from Asheville.

If you're interested, the details that i have are below.

That's about where we have it pinned, too.
I've called the SC Civil Air Patrol and asked them if they could do a training flight in the area looking for the remnants of the balloon.
Because it never burst, the envelope should still be attached and in one piece. Should be easy to spot.
The part I'm currently disappointed about is the BACKUP tracker, using a GSM arduino model, has failed. I think it ran out of batteries before landing. That's what I get for turning a 2 1/2 hour flight into a 13 hour flight.

If anyone is in the general area and wants to look around for it, my phone number and an offer for a cash reward is all over the box.

From: <yahoo-mail@...>
Topic: 3887 Message: 3887

I am having problems with my TM-D700; the remote head does not work when connected to the radio. The remote head works when connected to a different radio and the radio works when controlled via a computer, but the remote head (I've tried two) and the radio don't work together.

Is there a place locally that can repair this radio?

Thanks!
William

Thanks for the suggestion Larry; I've tried all of the simple things like swapping wires, resetting the radio, etc.

This radio failed while it was on my motorcycle. I had the wire for the control head ran under the seat and under the fairing to the handlebar mounted head. Somewhere along the way, that cable got broken and I think shorted, causing the problem.

Hello fellow East Tennessee APRS enthusiasts. My callsign is K9OJ and I moved down from West Virginia last August. I've been a Ham since the 80's but I haven't been very active in over 10 years but APRS has kick started the hobby again. I have a WIDE1 digipeater/igate/APRS-tt server in my home's attic. I'm located southeast of Greeneville TN in the Cherokee National Forest.

I have a very strong signal from K9RGI's WIDE2 digipeater in Telford and I hear KK4WTI's digi in Jonesborough a lot too. I'm also getting direct contact from KC4LU's monster mountain digipeater west of Morristown.

Just wanted to say hello,

Rob,
Welcome to East Tennessee. I haven't been have much active as a ham myself in the last several years and likewise haven't been very active until only recently. My digi, KS4NG-7, is being re-done and will be relocated nearby. This is the first post I can remember on this group's page in a very long time. It would be interesting to see how many of us respond to see who's left.

3904. What I've Been Up To

Yahoo group: EastTNAPRS
Date: 2015-01-26 17:32:11 UTC
From: robinette@...
Topic: 3904 Message: 3904

To keep the ball rolling I thought I'd tell you what I've been up to lately. I'm located in the far southern tip of Washington County TN just inside the Cherokee National Forest at an elevation of 1500 feet near the Nolichucky River. I have a Yaesu FT-1DR HT for mobile APRS and use an FT-2900R for the attic digipeater. I have a raspberry pi single board computer with a wifi dongle in the attic shack running Direwolf APRS software connected to a Tigertronics Signalink USB which is connected to the radio. My antenna is a copper pipe Slim Jim hanging from the attic rafters.

Direwolf acts as an APRS server so it can feed data to UIView32, APRSIS and other APRS client software running on any computer anywhere in the house. Direwolf is an excellent, feature packed free APRS program that runs amazingly well on the tiny raspberry pi. There's also a version that runs on pretty much any version of Windows. Info on Direwolf can be found here: https://home.comcast.net/~wb2osz/site/

My digipeater is set up as a WIDE1 TNn fill-in digipeater for the Nolichucky river valley. I'm using the Direwolf internet server to receive and transmit but I'm filtering it to a 20 mile radius of my station and to 10 packets in five minutes to limit QRM.

I activated the APRStt touch tone feature in Direwolf so anyone can send their DTMF encoded callsign to my digipeater and get their position reported on air as an APRS packet and through my APRS IS server online. The position reported is is my digipeater's location unless you send a more specific location using DTMF but it's one way to get on the APRS map without having to use an APRS capable radio. More information on APRStt can be found here: APRS Touchtone http://www.aprs.org/aprstt.html

http://www.aprs.org/aprstt.html

APRS Touchtone http://www.aprs.org/aprstt.html APRStt would speak the TRAFFIC Speed past any TRAFFIC choke point that is listed in the TRAFFIC.POS file. This was for daily commuters. See the original ...

View on www.aprs.org http://www.aprs.org/aprstt.html
Preview by Yahoo

This sight has a cool little callsign to DTMF translator. You can store this DTMF string in your radio to transmit to APRStt capable digipeaters to get your approximate location in the APRS system: APRSTT Translator http://www.retroscape.com/aprstt/

APRSTT Translator http://www.retroscape.com/aprstt/

I recently converted an old MFJ-1278 multi-mode TNC to a true TNC-2 clone so I could run a UIDIGI ROM in it. With the UIDIGI ROM it can function as a stand-alone digipeater (no computer needed). Right now it's not being used but can be pressed into service if needed. It might work well as a remote digipeater. I detailed the conversion here: MFJ-1278 to

TNC-2 http://robrobinette.com/MFJ-1278_Convert_TNC-2.htm

The .inf and .gif files are UI-View map files of East Tennessee. They should be placed in UI-View's MAP folder.

I'm Tony, I've had my Amateur (Tech) license since 1993, worked some packet in the mid 90's and I'm looking to get into APRS. I currently have an Ubuntu machine running Xastir but my old Baypac 1 has seen better days, I'm really interested in building a TNC-X and was wondering if anyone is using one or would suggest another brand that works good with Linux?

Tony,
I have a TNC-x which works fine, although I haven't used it for years. Don't know about Linux interface. Some digipeaters are nothing more than one of these with the digipeater daughterboard and a simple 2mtr transceiver. I would suggest you contact John Hansen at Coastal Chipworks. He is very helpful and manufactures the TNC-x. The website is http://www.coastalchip.com

Thank you Don for the information about the daughterboard, I didn't know that little TNC could be a (stand alone) digipeaters without a computer. I like the TNC-X is a kit, though it's be a few years since I've use the soldering iron, it will be nice to build (even a kit) some electronic devices again. I'll contact John this week once I figure out all the questions to ask. Thank again, Tony

I built a sound modem and running Xastir on an Ubuntu machine to get my feet wet, receives other stations well and I'm transmitting to one hop (TN) every 30 minutes (Good Paths on aprs.fi) and would like to ask, what would be my next step(s) in testing or further setting up my Home station?

I'm building a TNC-Pi w/ Raspberry Pi 2, anyone running one around here?

Thank you,
Tony - N9SIR

3916. iGate experimenting ?

Yahoo group: EastTNAPRS
Date: 2015-07-30 17:27:02 UTC
From: n9sir.tech@...
Topic: 3916 Message: 3916

Hello,

I'm currently using Raspberry Pi 2 with a TNC-Pi 2, it's connected to GlobalSat GPS, Wi-Fi dongle (no iGate either way) and a 7W HT with a home brew (2M/70cm) J-Pole.

I'm running Xastir on Wheezy, setup as a Home Station (N9SIR-1 on TN every 30 minutes)

With the above setup I'm able to receive data from ISS and have transmitted my APRS through it, but I've had no success operating a (receive only) iGate for the ISS..

I'd like to experiment an iGate for local APRS but don't want to be disruptive, could I setup an iGate (attenuated receive, to not clog up the Host) and work my second APRS station (on very low wattage, to not clog up the local APRS) ?

I'd really like to figure out this iGate, eventually I'd like to add a second TNC-Pi for satellite (receive only) iGate and use the first TNC-Pi just for the local APRS as a Home (no iGate or Digi) Station..

Any help, suggestion and/or permission would be great.

An iGate is not disruptive unless you configure it to transmit to RF unnecessary items. Feel free to enable the igate features in Xastir and begin playing with those capabilities.

What maps are you using in Xastir on the raspberry? How's performance there?

Thank you William,

I'll have better luck getting the iGate going on the local APRS than making a setting changes and waiting for a satellite pass to see if it works..

I'm using OnlineStreetMap (tiled_mapnik.geo) right now, it loads as quick as Xastir opens and then you can re-size the map quickly too. I'd need to download the (just the South-East) maps to the SD card and try it, hope it works as quick.

Thank again,
Tony

Hello William,

I'm having a fun time with the iGate feature, I've been trying to run two TNC's (for local APRS and satellite APRS) on the Raspberry Pi. The satellites have been a bit tricky, but I hope to iGate them soon.

It was good meeting you the other day, hope I didn't startle you..

Thanks again,
Tony - N9SIR

Hello everyone,

I want to run my Raspberry Pi APRS Station along with a Winlink software (PiGate), but I'm not sure if I should run Winlink as a Client or a iGate.. Anyone have suggestions running Winlink here in East Tennessee?

Thanks in advance.

I have a PK-12 it should be very similar. However I'm not sure but I thought the PK-96 only did 9600 baud.
